## Quick Study Guide for the Airbus A330

### Airbus 330

### The Ultimate Guide for Pilots

Captain John A. Moktadier graduated and received his Bachelor's Degree from Embry-Riddle Aeronautical University in Daytona Beach, Florida. He has been flying for the past 35 years and currently holds both a Gold Seal Flight Instructor and Advanced Ground Instructor licenses from the FAA. Capt. Moktadier has four type ratings which include: Airbus 330, Airbus 320, Boeing 747 and Boeing 727. He has logged over 24,000 hours flight time with the majority of his hours in jet transport and wide body aircraft. He has flown around the world. Captain Moktadier served as a Boeing 727 Check Airman (TRE) and conducted rating rides, proficiency checks, instructions and simulator checks and line checks for over 10 years with a commercial airline in the United States. He has trained hundreds of pilots with no failures and well above average results. The pilots he has trained have lots of respect for Capt. Moktadier's knowledge and his training style made them feel relaxed during the entire simulator session maximizing their learning due to his teaching ability, honesty and integrity. They have all commented that he is a true professional instructor and TRE. This is his second book that he has published. The first one was Boeing 727 Flight Master which received many outstanding and excellent reviews and positive feedback from the professionals in the airline industry who read the book and it soon became one of the best training books on a Boeing 727.

## Introduction to Fly-by-Wire Flight Control Systems

*Kern Aerospace, LLC* Is it possible to describe how fly-by-wire control systems work, without diving into engineering details? It is a significant challenge for engineers to describe fly-by-wire concepts without math or block diagrams, but generally a greater challenge for pilots to understand the engineers' equations. This is not an engineering textbook and there will be no math! Rather than describe a particular aircraft's design, it explains general concepts from a pilot's perspective. The math to design these advanced systems is complicated, but the strategies underlying their designs are easily described and understood. Knowledge of fly-by-wire principles gives professional pilots an advantage to apply the flight manual procedures for their aircraft. This book describes the fundamentals of fly-by-wire in an approachable way, including: - Problems with mechanical flight control designs - Why are four computers better than one or two? - Popular control laws - What sensors are needed, and why - Design considerations for risk mitigation

## Transdisciplinary Lifecycle Analysis of Systems

## Proceedings of the 22nd ISPE Inc. International Conference on Concurrent Engineering, July 20-23, 2015

*IOS Press* Concurrent Engineering (CE) is based on the premise that different phases of a product's lifecycle should be conducted concurrently and initiated as early as possible within the Product Creation Process (PCP). It has become the substantive basic methodology in many industries, including automotive, aerospace, machinery, shipbuilding, consumer goods, process industry and environmental engineering. CE aims to increase the efficiency of the PCP and reduce errors in later phases while incorporating considerations for full lifecycle and through-life operations. This book presents the proceedings of the 22nd ISPE Inc. (International Society for Productivity Enhancement) International Conference on Concurrent Engineering (CE2015) entitled 'Transdisciplinary Lifecycle Analysis of Systems', and held in Delft, the Netherlands, in July 2015. It is the second in the series 'Advances in Transdisciplinary Engineering'. The book includes 63 peer reviewed papers and 2 keynote speeches arranged in 10 sections: keynote speeches; systems engineering; customization and variability management; production oriented design, maintenance and repair; design methods and knowledge-based engineering; multidisciplinary product management; sustainable product development; service oriented design; product lifecycle management; and trends in CE. Containing papers ranging from the theoretical and conceptual to the highly pragmatic, this book will be of interest to all engineering professionals and practitioners; researchers, designers and educators.

## Performance Pilot

## Skills, Techniques, and Strategies to Maximize Your Flying Performance

*Createspace Independent Publishing Platform* Do you want to be a better pilot? Do you want to improve your judgment and skills in training, tests, and throughout your career? Why do the best pilots consistently perform to a higher standard? It is the mental game and preparation that separate the good pilots from the high-performance pilots. Professional athletes have relied on sports psychology and coaching for years to help improve performance. Pilots too can benefit from mental strategies, but until now there has been scant aviation-specific content on how to prepare to fly. In *Performance Pilot*, noted performance coach, Ross Bentley, and professional aviator, Phil Wilkes, reveal aviation-specific procedures, techniques, and strategies to help you methodically, deliberately, and more effectively prepare for, conduct, and evaluate your flying and consistently perform at the highest level. For pilots just starting out, *Performance Pilot* can help you create a foundation to build upon and use throughout your flying career. The lessons and techniques are equally relevant to pilots at any experience level, whether recreational or professional, civil or military. In short, this book will make you a better pilot. **REVIEWS FROM PILOTS** "I've had the opportunity to fly large four-engine transport aircraft on all seven continents, from combat in Afghanistan to remote ice runways in Antarctica. Every flight demands the highest level of performance from the crew to ensure safe operations. As a military flight instructor, I have flown with pilots of all experience levels. It is amazing to see the difference between pilots that prepare and those that don't. This book has techniques for all experience levels designed to help any pilot develop their skills and performance. For those just starting out, the techniques in this book can help create a foundation they can build upon and use throughout their flying career. In short, the strategies in this book can help build better pilots." Lt Col Brent Keenan, USAF, C-17A Instructor Pilot & Squadron Commander "This book is relevant to any recreational, professional or military pilot looking to enhance their own performance and skills. As a current instructor of F18 fighter pilots, this is certainly a book I will recommend to all my students." Squadron Leader M A Saunders, RAAF Fighter Combat Instructor "Plenty of books describe the technical aspects of flying airplanes, but the human performance psychology has largely been ignored. There is very little information for pilots on how to improve on high performance skills needed for high-stress and high-workload types of piloting. This book addresses that gap and gives pilots an understanding of the best and most efficient techniques on improving their aircraft handling in a way that will garner real results without needing to turn a propeller. I only wish I had this book years ago." Anthony Crichton-Browne, Airbus A320 Captain, competition aerobatic pilot & aviation podcaster "During my training as a military pilot, I utilized some of the strategies described in this book. However, my personal implementation was haphazard and lacked the methodical and deliberate implementation required to apply them in an effective manner. This book describes the structure needed to effectively apply these learning techniques as well as introducing many new and complementary ones I had not considered. I am sure that my aviation training and subsequent career would have benefitted greatly had this text been available at the time." Jaimie Tilbrook, Former RAAF C130 Hercules Captain "Reading and practicing the advice in "Performance Pilot" will help enhance your airmanship. I know that after any of my flying students or colleagues have read "Performance Pilot", I'll sleep better in knowing that their flying careers will take them much more safely throughout their local skies and beyond." Andrew Musca-Unger, Grade 1 Flight Instructor & glider pilot

### QF32

### From the author of Fly!: Life Lessons from the Cockpit of QF32

*Macmillan Publishers Aus.* QF32 is the award winning bestseller from Richard de Crespigny, author of the forthcoming *Fly!: Life Lessons from the Cockpit of QF32*. On 4 November 2010, a flight from Singapore to Sydney came within a knife edge of being one of the world's worst air disasters. Shortly after leaving Changi Airport, an explosion shattered Engine 2 of Qantas flight QF32 - an Airbus A380, the largest and most advanced passenger plane ever built. Hundreds of pieces of shrapnel ripped through the wing and fuselage, creating chaos as vital flight systems and back-ups were destroyed or degraded. In other hands, the plane might have been lost with all 469 people on board, but a supremely experienced flight crew, led by Captain Richard de Crespigny, managed to land the crippled aircraft and safely disembark the passengers after hours of nerve-racking effort. Tracing Richard's life and career up until that fateful flight, QF32 shows exactly what goes into the making of a top-level airline pilot, and the extraordinary skills and training needed to keep us safe in the air. Fascinating in its detail and vividly compelling in its narrative, QF32 is the riveting, blow-by-blow story of just what happens when things go badly wrong in the air, told by the captain himself.
