STRUCTURAL DESIGN FOR FIRE SAFETY

John Wiley & Sons Structural Design for Fire Safety, 2nd edition Andrew H. Buchanan, University of Canterbury, New Zealand Anthony K. Abu, University of Canterbury, New Zealand A practical and informative guide to structural fire engineering This book presents a comprehensive overview of structural fire engineering. The book begins with an introduction to fire safety in buildings, from fire growth and development to the devastating effects of severe fires on large building structures. Methods of calculating fire severity and fire resistance are then described in detail, together with both simple and advanced methods for assessing and designing for structural fire safety in buildings constructed from structural steel, reinforced concrete, or structural timber. Structural Design for Fire Safety, 2nd edition bridges the information gap between fire safety engineers, structural engineers and building officials, and it will be useful for many others including architects, code writers, building designers, and firefighters. Key features: • Updated references to current research, as well as new end-of-chapter questions and worked examples. • Authors experienced in teaching, researching, and applying structural fire engineering in real buildings. • A focus on basic principles rather than specific building code requirements, for an international audience. ISLAND BATS

EVOLUTION, ECOLOGY, AND CONSERVATION

University of Chicago Press The second largest order of mammals, Chiroptera comprises more than one thousand species of bats. Because of their mobility, bats are often the only native mammals on isolated oceanic islands, where more than half of all bat species live. These island bats represent an evolutionarily distinctive and ecologically significant part of the earth's biological diversity. Island Bats is the first book to focus solely on the evolution, ecology, and conservation of bats living in the world's island ecosystems. Among other topics, the contributors to this volume examine how the earth's history has affected the evolution of island bats, investigate how bat populations are affected by volcanic eruptions and hurricanes, and explore the threat of extinction from human disturbance. Geographically diverse, the volume includes studies of the islands of the Caribbean, the Western Indian Ocean, Micronesia, Indonesia, the Philippines, and New Zealand. With its wealth of information from long-term studies, Island Bats provides timely and valuable information about how this fauna has evolved and how it can be conserved.

OPTICS OF LIGHT SCATTERING MEDIA

PROBLEMS AND SOLUTIONS

Springer-Praxis Summarizes current knowledge of the optical properties of single small particles and light scattering media (e.g. snow, clouds, foam, aerosols) crucial to diverse applications in atmospheric physics, atmospheric optics, ocean optics, remote sensing, astronomy, astrophysics, and biological optics. The data - which includes such developments as vapor-liquid and liquid-liquid equilibria, low-and high-pressure equilibrium data, enthalpic and volumetric data, and second virial coefficients - is necessary in studying intermolecular interactions, gaining insights into the molecular nature of mixtures, and providing the necessary basis for any developments of theoretical thermodynamic models. - CRC Handbook of Thermodynamic Data of Polymer Solutions, Three Volume Set CRC Handbook of Thermodynamic Data of Polymer Solutions at Elevated Pressures CRC Handbook of Thermodynamic Data of Aqueous Polymer Solutions CRC Handbook of Thermodynamic Data of Copolymer Solutions

GENERALIZED SOLUTIONS OF NONLINEAR PARTIAL DIFFERENTIAL EQUATIONS

Elsevier Science Limited In this way, one avoids the complexities and difficulties of the customary functional analytic methods which would involve sophisticated topologies on various function spaces. The result is a rather elementary yet powerful and far-reaching method which can, among others, give generalized solutions to linear and nonlinear partial differential equations previously unsolved or even unsolvable within distributions or hyperfunctions. Part 1 of the volume discusses the basic limitations of the linear theory of distributions when dealing with linear or nonlinear partial differential equations, particularly the impossibility and degeneracy results. Part 2 examines the way Colombeau constructs a nonlinear theory of generalized functions and then succeeds in proving quite impressive existence, uniqueness, regularity, etc., results concerning generalized solutions of large classes of linear and nonlinear partial differential equations.-

COSTING AND PRICING IN THE DIGITAL AGE

A PRACTICAL GUIDE FOR INFORMATION SERVICES

The proliferation of electronic information services has been retarded as much by the novel aspects of the pricing and accounting of resources they

represent as by fear of technology or tight budgets. Library provision poses special problems as it must accommodate a mixed economy: commitment to good public services, and cost-driven financial planning. Who should be responsible for network services spread across different cost centers? What are the costs that are masked by site licensing and top-slicing? Can economic and fiscal models guide those who plan for networked services? Incorporating step-by-step instructions, problem-solving techniques and broad case study material, this practical primer will help the reader address these concerns. This text is essential reading for all information providers and suppliers of electronic services, including managers in academic and public libraries, and will also be of great interest to students of librarianship and information management.

PROGRAM EVALUATION

A FIELD GUIDE FOR ADMINISTRATORS

Springer Science & Business Media This book is written to help human service program administrators either in interpret or conduct program

evaluations. Our intended audience includes administrators and those students being trained for careers in human services administration. Our focus is on persons interested in assessing programs in which people work with people to improve their condition. The book's title, *Program Evaluation: A Field Guide for Administrators*, describes how we hope you use this book-as a tool. In writing the book, we have attempted to meet the needs of persons who have to conduct program evaluations as well as those who must use those evaluations. Hence, we have attempted to make the book "user friendly. " You will find, for example, numerous guidelines, cautions, and specific suggestions. Use the book actively. Our primary motive is to help administrators make better decisions. In fact, the primary reason for program evaluation is to help program administrators make good decisions. These decisions often must balance the goals of equity (or fairness in the distribution of goods and services among people in the economy), efficiency (obtaining the most output for the least resources), and political feasibility. Take, for example, the administrator who must decide between a new program favored by some of the program's constituents, and maintaining the status quo, which is favored by other constituents.
