BUDDHISM AND THE FOURTH INDUSTRIAL REVOLUTION

VIETNAM BUDDHIST UNIVERSITY PUBLICATIONS EDITORS' INTRODUCTION BACKGROUND Currently, we are living in the fourth industrial revolution by which computers, automation, robots and people will work together in entirely new ways. Applying technological innovations will help the production process faster, less manpower and more fully collected data. Product quality is ensured by controlling raw materials to forming and transferring to consumers. However, it may have raised many issues for humans. One of its drawbacks is many workers will lose their jobs due to replacement machinery, while businesses may face difficulties in recruiting human resources to meet the requirements of the job. This can lead to inequality, even to break the labor market. Economic uncertainties will lead to instability in life and even politics. In addition, new technology will cause changes in power, security concerns, and a big gap between rich and poor or the way of communication through the Internet which challenges information security for both people and political systems. These problems have urged the world to find the right solutions urgently to attain sustainable development which is favor of the Buddhist philosophy. In this theme, we highly focus on the Buddhist approach and

response to the Fourth Industrial Revolution to generate happiness and peace for humankind.

CLINICAL PRACTICE GUIDELINES WE CAN TRUST

National Academies Press *Advances in medical, biomedical and health services research have reduced the level of uncertainty in clinical practice. Clinical practice guidelines (CPGs) complement this progress by establishing standards of care backed by strong scientific evidence. CPGs are statements that include recommendations intended to optimize patient care. These statements are informed by a systematic review of evidence and an assessment of the benefits and costs of alternative care options. Clinical Practice Guidelines We Can Trust examines the current state of clinical practice guidelines and how they can be improved to enhance healthcare quality and patient outcomes. Clinical practice guidelines now are ubiquitous in our healthcare system. The Guidelines International Network (GIN) database currently lists more than 3,700 guidelines from 39 countries. Developing guidelines presents a number of challenges including lack of transparent methodological practices, difficulty reconciling conflicting guidelines, and conflicts of interest. Clinical Practice Guidelines We Can Trust explores questions surrounding the quality of CPG development processes and the establishment of standards. It proposes eight standards for developing trustworthy clinical practice guidelines emphasizing transparency; management of conflict of interest ; systematic review--guideline development intersection; establishing evidence foundations for and rating strength of guideline recommendations; articulation of recommendations; external review; and updating. Clinical Practice Guidelines We Can Trust shows how clinical practice guidelines can enhance clinician and patient decision-making by translating complex scientific research findings into recommendations for clinical practice that are relevant to the individual patient encounter, instead of implementing a one size fits all approach to patient care. This book contains information directly related to the work of the Agency for Healthcare Research and Quality (AHRQ), as well as various Congressional staff and policymakers. It is a vital resource for medical specialty societies, disease advocacy groups, health professionals, private and international organizations that develop or use clinical practice guidelines, consumers, clinicians, and payers.*
