EFFICIENTLY INEFFICIENT

HOW SMART MONEY INVESTS AND MARKET PRICES ARE DETERMINED

Princeton University Press Financial market behavior and key trading strategies—illuminated by interviews with top hedge fund experts Efficiently Inefficient describes the key trading strategies used by hedge funds and demystifies the secret world of active investing. Leading financial economist Lasse Heje Pedersen combines the latest research with real-world examples to show how certain tactics make money—and why they sometimes don't. He explores equity strategies, macro strategies, and arbitrage strategies, and fundamental tools for portfolio choice, risk management, equity valuation, and yield curve trading. The book also features interviews with leading hedge fund managers: Lee Ainslie, Cliff Asness, Jim Chanos, Ken Griffin, David Harding, John Paulson, Myron Scholes, and George Soros. Efficiently Inefficient reveals how financial markets really work.

VPNS ILLUSTRATED

TUNNELS, VPNS, AND IPSEC

Addison-Wesley Professional Virtual private networks (VPNs) based on the Internet instead of the traditional leased lines offer organizations of all sizes the promise of a low-cost, secure electronic network. However, using the Internet to carry sensitive information can present serious privacy and security problems. By explaining how VPNs actually work, networking expert Jon Snader shows software engineers and network administrators how to use tunneling, authentication, and encryption to create safe, effective VPNs for any environment. Using an example-driven approach, *VPNs Illustrated* explores how tunnels and VPNs function by observing their behavior "on the wire." By learning to read and interpret various network traces, such as those produced by tcpdump, readers will be able to better understand and troubleshoot VPN and network behavior. Specific topics covered include: Block and stream symmetric ciphers, such as AES and RC4; and asymmetric ciphers, such as RSA and ElGamal Message authentication codes, including HMACs Tunneling technologies based on gtunnel SSL protocol for building network-to-network VPNs SSH protocols as drop-in replacements for telnet, ftp, and the BSD r-commands Lightweight VPNs, including VTun, CIPE, tinc, and OpenVPN IPsec, including its Authentication Header (AH) protocol, Encapsulating Security Payload (ESP), and IKE (the key management protocol) Packed with details, the text can be used as a handbook describing the functions of the protocols and the message formats that they use. Source code is available for download, and an appendix covers publicly available software that can be used to build tunnels and analyze traffic flow. *VPNs Illustrated* gives you the knowledge of tunneling and VPN technology you need to understand existing VPN implementations and successfully create your own.

COSMIC CATASTROPHES

SUPERNOVAE, GAMMA-RAY BURSTS, AND ADVENTURES IN HYPERSPACE

Cambridge University Press In this tour de force of the ultimate and extreme in astrophysics, renowned astrophysicist and author J. Craig Wheeler takes us on a breathtaking journey to supernovae, black holes, gamma-ray bursts and adventures in hyperspace. This is no far-fetched science fiction tale, but an enthusiastic exploration of ideas at the cutting edge of current astrophysics. Wheeler follows the

tortuous life of a star from birth to evolution and death, and goes on to consider the complete collapse of a star into a black hole, worm-hole time machines, the possible birth of baby bubble universes, and the prospect of a revolutionary view of space and time in a ten-dimensional string theory. Along the way he offers evidence that suggests the Universe is accelerating and describes recent developments in understanding gamma-ray bursts--perhaps the most catastrophic cosmic events of all. With the use of lucid analogies, simple language and crystal-clear cartoons, *Cosmic Catastrophes* makes accessible some of the most exciting and mind-bending objects and ideas in the Universe. J. Craig Wheeler is currently Samuel T. and Fern Yanagisawa Regents Professor of Astronomy at the University of Texas at Austin and Vice President of the American Astronomical Society as of 1999.

1100 ARCHITECT

For more than twenty years, David Piscuskas and Juergen Riehm, principals of 1100 Architect, have worked toward a refined architecture that captures the spirit of early modernism and translates traditional sensibilities of harmony, composition, and precision into a contemporary context. The firm's designs do not adhere to any specific stylistic codes but do have a recognizable, yet understated architectural signature: an elegance of proportion, a subtle mix of colors, meticulous details and craftsmanship. Each project shown in this volume, the first monograph on the work of 1100, exemplifies that signature. Presented with exquisite color photographs, working drawings, models, and sketches, the designs range from apartments and houses (many for clients in the worlds of art, fashion, and theater) to retail and art-related spaces, including the Robert Mapplethorpe Foundation, TSE, J.Crew, and Metro Pictures, all in New York. Paralleling the diverse visual material, the rich and layered text epitomizes the nature of Piscuskas and Riehm's partnership, simultaneously exploring the relationship between the architects and their architecture, the literal and the abstract, the tactile and the visual.
