BIOPROSPECTING

SUCCESS, POTENTIAL AND CONSTRAINTS

Springer This book considers all aspects of bioprospecting in 14 succinct chapters and a forward by David Hawksworth. The organisms addressed include plants, insects, fungi, bacteria and phages. Bioprospecting has never been more relevant and is of renewed interest, because of the extremely worrying rise in novel, resistant pathogenic microorganisms. The practices in pharmaceutical companies have failed to deliver novel antibiotics to control these infections. We need to look for new sources of drugs from the environment on a massive scale as drug discovery is “too important to fail”. Furthermore, the field can add great value to ecosystems in terms of economics, while providing additional reasons for maintaining associated services, such as food provision, benign climate, effective nutrient cycling and cultural practices. Bioprospecting provides another reason why climate change must be reduced in order to preserve relevant environments. Previous bioprospecting projects should be re-visited and established biodiversity centres have a major role. Many different ecosystems exist which contain unique organisms with the potential to supply novel antibiotics, enzymes, food, and cosmetics, or they may simply have aesthetic value. The book stresses the difficulties in obtaining successful products and yet describes why natural products should be investigated over combinatorial chemistry. Personal experience of bioprospecting projects are given significance. Issues such as how to share the benefits equitably with local communities are described and why pharmaceutical companies can be reluctant to be involved. Legal issues are discussed. Finally, there has never been a better time for a new book on bioprospecting, because of the need to preserve ecosystems, and from the emergence of resistant pathogenic microorganisms.

COMPUTATIONAL ATOMIC STRUCTURE

AN MCHF APPROACH

Routledge **Computational Atomic Structure: An MCHF Approach** deals with the field of computational atomic structure, specifically with the multiconfiguration Hartree-Fock (MCHF) approach and the manner in which this approach is used in modern physics. Beginning with an introduction to computational algorithms and procedures for atomic physics, the

book describes the theory underlying nonrelativistic atomic structure calculations (making use of Breit-Pauli corrections for relativistic effects) and details how the MCHF atomic structure software package can be used to this end. The book concludes with a treatment of atomic properties, such as energy levels, electron affinities, transition probabilities, specific mass shift, fine structure, hyperfine-structure, and autoionization. This modern, reliable exposition of atomic structure theory proves invaluable to anyone looking to make use of the authors' MCHF atomic structure software package, which is available publicly via the Internet.

100 RECIPES

THE ABSOLUTE BEST WAYS TO MAKE THE TRUE ESSENTIALS

America's Test Kitchen **A provocative, handpicked collection of relevant (and surprising) essential recipes for today's cook. We have countless recipes at our disposal today but what are the real keepers, the ones that don't just feed us when we're hungry or impress our friends on Saturday night, but inspire us to get into the kitchen? At the forefront of**

American cooking for more than 20 years, the editors at America's Test Kitchen have answered this question in an essential collection of recipes that you won't find anywhere else: **100 Recipes Everyone Should Know How to Make**. Organized into three recipe sections—Absolute Essentials, Surprising Essentials, and Global Essentials—each recipe is preceded by a thought-provoking essay that positions the dish. For example, **Treating Pasta Like Rice Simplifies Everything**; **A Covered Pot Is a Surprisingly Good Place to Roast a Chicken**; and **Re-imagine Pie in a Skillet to Simplify the Process**. You'll find useful workday recipes like a killer tomato sauce that's almost as easy as opening a jar of the store-bought stuff; genius techniques for producing amazing flavor—try poaching chicken breasts over a garlic-and-soy- spiked brine (trust us, it's that good); and familiar favorites reinvigorated—the best beef stew comes from Spain (and it's even easier to make than the stateside stew you've been eating for years). Gorgeous photography (shot right in the test kitchen) accompanies every recipe, revealing the finished dish as well as highlights of its preparation. Likely to stir debate among anyone interested in food and cooking, **100 Recipes Everyone Should Know How to Make** provides a snapshot of how we cook today and will galvanize even the most jaded cook to get into the kitchen. From the Hardcover edition.

EVERY SECOND COUNTS

THE EXTRAORDINARY RACE TO TRANSPLANT THE FIRST HUMAN HEART

Simon and Schuster **The dramatic race to transplant the first human heart spanned two years, three continents and five cities against a backdrop of searing tension, scientific brilliance, ethical controversy, racial strife and emotional turmoil. It culminated in a terrifying moment in the early hours of 3 December 1967 when, in a cramped operating theatre in a Cape Town hospital, Professor Chris Barnard stared into an empty cavity from which he had just removed a heart. He knew that he had only minutes left to make history and save the life of a 55-year-old man by filling the gaping hole in his chest with a heart which had just been beating inside a 25-year-old woman. Every Second Counts is the story of this gripping race to conquer the greatest of medical challenges. It also reveals the truth about the man at the centre of it all, whose turbulent life story was just as gripping. The kind of true story that would be dismissed as far-fetched if presented as fiction, it combines an utterly compelling portrait of cutting-edge science with raw human drama, and shows how the course of medicine itself was changed for ever.**

WE LOVE HOCKEY

TeNeues **It is the 26th minute of the Finland-Russia semifinal of the 2011 IIHF Ice Hockey World Championships: Finnish player Mikael Granlund, just 19 years old, skates around behind the Russian goal. Suddenly he scoops the puck onto the toe of his blade, glides forward past the side of the goal and slams the puck into the net. The players and spectators go wild. It was a once-in-a-lifetime goal, a goal that was an artistic masterpiece, so beautiful that the Finnish post office created a stamp to celebrate it. Contrast that story with this one: in Sparta Prague's home arena, Vladimír Nováček steers the ice resurfacing machine around the rink. What's so special about that? Nováček has been maintaining the ice for Sparta since 1968; he is now 82 years old. His work doesn't prompt much excitement, and he certainly doesn't have his own postage stamp. Still, the young Finnish world champion and the elderly Czech ice**

manager are united by their dedication to the sport of ice hockey. Their stories and many others are told in *We Love Hockey*. The very personal and emotional vignettes and stunning photographs make this book extremely exciting and give it a very special place in the sports literature market. It's about the greatest and the smallest moments, the men and women who are passionate about this sport, and everything that makes ice hockey so fascinating.

PROJECT BASED TEACHING

HOW TO CREATE RIGOROUS AND ENGAGING LEARNING EXPERIENCES

ASCD It's no secret that in today's complex world, students face unparalleled demands as they prepare for college, careers, and active citizenship. However, those demands won't be met without a fundamental shift from traditional, teacher-centered instruction toward innovative, student-centered teaching and learning. For schools ready to make such a shift, project-based learning (PBL) offers a proven framework to help students be better equipped to tackle future challenges. Project Based Teachers encourage active questioning, curiosity, and peer learning; create learning environments in which every student has a voice; and have a mastery of content but are also comfortable responding to students' questions by saying, "I don't know. Let's find out together." In this book, Suzie Boss and John Larmer build on the framework for Gold Standard PBL originally presented in *Setting the Standard for Project Based Learning* and explore the seven practices integral to Project Based Teaching: Build the Culture Design and Plan Align to Standards Manage Activities Assess Student Learning Scaffold Student Learning Engage and Coach For each practice, the authors present a wide range of practical strategies and include teachers' reflections about and suggestions from their classroom experiences. This book and a related series of free videos provide a detailed look at what's happening in PBL classrooms from the perspective of the Project Based Teacher. Let's find out together.
