Button on Taxis Licensing Law and Practice Bloomsbury Publishing The fourth edition of Button on Taxis completely updates the text to take account of changes to legislation, case law and Guidance since the publication of the third edition. These include important Senior Court decisions relating to adoption of legislation, local authority decision-making processes, licence fees, Hackney carriage ranks, suitability of drivers and action against licensed vehicles. The legislative changes include extensions to the duration of certain licences and the ability for private hire operators to subcontract across local authority boundaries. In addition, the impact of booking systems such as Uber is considered together with the Law Commission's proposals for reform of Hackney carriage and private hire legislation. This new edition will provide a timely update to what is acknowledged as an essential handbook for the taxi licensing practitioner. **Taxis Licensing Law and Practice** This concise handbook is designed for anyone involved in hackney carriage or private hire vehicle licensing and explains the law and procedure concerning it and the overlaps and conflicts between the two areas. In addition to a narrative outlining the law, the author makes use of flow charts, case digests, relevant legislation and a comprehensive range of draft forms for use by local authorities, giving the reader a step-by-step guide to this area of law. Offering a practical approach, this book provides the reader with a helpful overview of both hackney carriages and private hire vehicles and the licensing regime that controls them. **Reforming the law of taxi and private hire services a consultation paper** The Stationery Office This consultation paper presents the Law Commission's provisional proposals for reform of the legal framework relating to taxis and private hire vehicles. Taxis and private hire vehicles (PHVs) are an important part of local transport. They operate in highly regulated markets where safety and quality control are paramount. Licensing covers key areas such as the quality of services, the fitness of drivers, fare regulation and restrictions on the number of licenses issued. The current law on taxis and PHVs has been criticised for being complex and outdated. These proposals retain the important distinction between taxi - which can "ply for hire" on the street or a cab rank - and private hire vehicles which can only be pre-booked. But all vehicles would be subject to national minimum safety standards and, for private hire vehicles, these would replace more than 340 sets of local regulations. This will reduce the burden on business because, once appropriately licensed, a private hire firm could work freely across the country, without geographical restrictions. This would contribute to widening consumer choice and to making services cheaper and more competitive. The Commission also makes suggestions covering a wide range of issues, including improving provision for persons with disabilities, quantity restrictions and enforcement. [Law Commission website] **The Concise Guide to Licensing** Troubador Publishing Ltd Designed for the busy licensing officer, practitioner, elected member, statutory consultee or operator involved in licensing. It stems partially from the platforms' economic impact, which is felt most acutely in certain sectors: Uber drivers compete with taxi drivers; Airbnb hosts compete with hotels. Other consequences lie elsewhere: Uber is associated with a trend toward low-paying, precarious work, whereas Airbnb is accused of exacerbating real estate speculation and raising the cost of long-term rental housing. While governments in some jurisdictions have attempted to rein in the platforms, technology has enabled such companies to bypass conventional regulatory categories, generating accusations of "unfair competition" as well as debates about the merits of existing regulatory regimes. Indeed, the platforms blur a number of familiar distinctions, including personal versus commercial activity; infrastructure versus content; contractual autonomy versus hierarchical control. These ambiguities can stymie legal regimes that rely on these distinctions as organizing principles, including those relating to labour, competition, tax, insurance, information, the prohibition of discrimination, as well as specialized sectoral regulation. This book is organized around five themes: technologies of regulation; regulating technology; the sites of regulation (local to global); regulating markets; and regulating labour. Together, the

chapters offer a rich variety of insights on the regulation of the sharing economy, both in terms of the traditional areas of law they bring to bear, and the theoretical perspectives that inform their analysis. This book is published in English. - La controverse entoure les plateformes d'économie de partage, partiellement en raison de leur impact économique. Certains secteurs subissent des contrecoups de manière plus aigüe : les chauffeurs d'Uber font concurrence aux chauffeurs de taxi, ou les hôtes Airbnb rivalisent avec les hôtels. Par ailleurs, Uber exacerberait l'emploi précaire et mal rémunéré tandis qu'Airbnb amplifierait la spéculation immobilière et entraînerait, à terme, une hausse du coût de location. On a tenté de réglementer ce type de plateformes, mais la technologie est telle qu'elle permet aux entreprises d'aisément contourner la réglementation conventionnelle, si bien que les accusations de « concurrence déloyale » fusent de toutes parts, provoquant une remise en question du cadre réglementaire. En effet, de telles plateformes viennent brouiller les cartes, confondant les distinctions convenues entre personnel et commercial, infrastructure et contenu, autonomie contractuelle et contrôle hiérarchique. Cette ambiguïté peut avoir d'importantes répercussions sur le bon fonctionnement de l'appareil réglementaire qui encadre les principes organisateurs du travail, de la concurrence, de l'impôt, de l'assurance, de l'information et de de l'interdiction de la discrimination, sans parler de la réglementation sectorielle spécialisée. Cinq thématiques sont abordées dans cet ouvrage : les technologies de la réglementation; la réglementation de la technologie; les lieux de la réglementation (du local au mondial); la réglementation des marchés; et la réglementation du travail. Les chapitres se conjuguent pour offrir une réflexion d'une gamme d'experts sur la jurisprudence traditionnelle que sur les approches théoriques qui informent et façonnent la réglementation de l'économie du partage. Ce livre est publié en anglais. **Smith & Monkcom The Law of Gambling** Bloomsbury Professional Firmly established as the leading work on the law relating to all forms of gambling, Smith and Monkcom: The Law of Gambling will provide you with everything you need to know about the law governing gambling in the UK. Featuring a diverse set of contributors from many academic disciplines and countries, the book compiles the most important, up-to-date research on the regulation of the sharing economy. The first part surveys the nature of the sharing economy, explores the central challenge of balancing innovation and regulatory concerns, and examines the institutions confronting these regulatory challenges, and the second part turns to a series of specific regulatory domains, including labor and employment law, consumer protection, tax, and civil rights. This groundbreaking work should be read by anyone interested in the dynamic relationship between law and the sharing economy. **Getting to Zero Alcohol-Impaired Driving Fatalities A Comprehensive Approach to a Persistent Problem** National Academies Press Alcohol-impaired driving is an important health and social issue as it remains a major risk to Americans' health today, surpassing deaths per year of certain cancers, HIV/AIDS, and drownings, among others, and contributing to long-term disabilities from head and spinal injuries. Progress has been made over the past decades towards reducing these trends, but that progress has been incremental and has stagnated more recently. Getting to Zero Alcohol-Impaired Driving Fatalities examines which interventions (programs, systems, and policies) are most promising to prevent injuries and death from alcohol-impaired driving, the barriers to action and approaches to overcome them, and which interventions need to be changed or adopted. This report makes broad-reaching recommendations that will serve as a blueprint for the nation to accelerate the progress in reducing alcohol-impaired driving fatalities. **Carlson on Evidence Comparing the Georgia and Federal Rules** "This book comprehensively compares Georgia's new evidence code with the corresponding federal evidence rule and prior Georgia evidence law, providing detailed commentary for those new Georgia rules with federal correspondents. It explores the key concepts and problem-solving techniques required by researchers and logistics professionals to effectively manage the continued expansion of logistics transportation systems, which is expected to reach an estimated 25 billion tons in the United States alone by 2045. This book provides an ample understanding of logistics transportation systems, including basic concepts, in-depth modeling analysis, and network analysis for researchers and practitioners. In addition, it covers policy issues related to transportation logistics, such as security, rules and regulations, and emerging issues including reshoring. This book is an ideal guide for academic researchers and both undergraduate and graduate students in transportation modeling, supply chains, planning, and systems. It is also useful to transportation practitioners involved in planning, feasibility studies, consultation and policy for transportation systems, logistics, and infrastructure. Provides real-world examples of logistics systems solutions for multiple transportation modes, including seaports, rail, barge, road, pipelines, and airports Covers a wide range of business aspects, including customer service, cost, and decision analysis Features key-term definitions, concept overviews, discussions, and analytical problem-solving **Autonomous Driving Technical, Legal and Social Aspects** Springer This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key

societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of "autonomous driving".

Between Public and Private Mobility Examining the Rise of Technology-Enabled Transportation Services "TRB Special Report 319 analyzes the ways that innovative transportation services--including ridesharing, carsharing, bikesharing, and microtransit--are changing mobility for millions of travelers. Such services could reduce congestion and emissions from surface transportation if regulated wisely to encourage concurrent, instead of sequential, ridesharing. Rapidly growing transportation network companies (TNCs), such as Uber and Lyft, however, are disrupting conventional taxi and limousine services and are raising policy challenges related to personal security and public safety, insurance requirements, employment and labor issues, and accessibility and equity. The committee's report offers guidance to state and local officials responsible for policy setting and regulation of for-hire transportation services in each of these areas. The report also addresses the need for greater consistency in regulations across jurisdictions and calls for TNCs to share more information about the volume, the frequency, and the types of trips they are providing, to allow for informed regulation and planning of transportation services"--provided by publisher.

The Challenge of Crime in a Free Society A Report This report of the President's Commission on Law Enforcement and Administration of Justice -- established by President Lyndon Johnson on July 23, 1965 -- addresses the causes of crime and delinquency and recommends how to prevent crime and delinquency and improve law enforcement and the administration of criminal justice. In developing its findings and recommendations, the Commission held three national conferences, conducted five national surveys, held hundreds of meetings, and interviewed tens of thousands of individuals. Separate chapters of this report discuss crime in America, juvenile delinquency, the police, the courts, corrections, organized crime, narcotics and drug abuse, drunkenness offenses, gun control, science and technology, and research as an instrument for reform. Significant data were generated by the Commission's National Survey of Criminal Victims, the first of its kind conducted on such a scope. The survey found that not only do Americans experience far more crime than they report to the police, but they talk about crime and the reports of crime engender such fear among citizens that the basic quality of life of many Americans has eroded. The core conclusion of the Commission, however, is that a significant reduction in crime can be achieved if the Commission's recommendations (some 200) are implemented. The recommendations call for a cooperative attack on crime by the Federal Government, the States, the counties, the cities, civic organizations, religious institutions, business groups, and individual citizens. They propose basic changes in the operations of police, schools, prosecutors, employment agencies, defenders, social workers, prisons, housing authorities, and probation and parole officers.

Artificial Intelligence and International Economic Law Disruption, Regulation, and Reconfiguration Cambridge University Press Artificial intelligence (AI) technologies are transforming economies, societies, and geopolitics. Enabled by the exponential increase of data that is collected, transmitted, and processed transnationally, these changes have important implications for international economic law (IEL). This volume examines the dynamic interplay between AI and IEL by addressing an array of critical new questions, including: How to conceptualize, categorize, and analyze AI for purposes of IEL? How is AI affecting established concepts and rubrics of IEL? Is there a need to reconfigure IEL, and if so, how? Contributors also respond to other cross-cutting issues, including digital inequality, data protection, algorithms and ethics, the regulation of AI-use cases (autonomous vehicles), and systemic shifts in e-commerce (digital trade) and industrial production (fourth industrial revolution). This title is also available as Open Access on Cambridge Core.

The Immortal Life of Henrietta Lacks Crown #1 NEW YORK TIMES BESTSELLER • "The story of modern medicine and bioethics—and, indeed, race relations—is refracted beautifully, and movingly."—Entertainment Weekly NOW A MAJOR MOTION PICTURE FROM HBO® STARRING OPRAH WINFREY AND ROSE BYRNE • ONE OF THE "MOST INFLUENTIAL" (CNN), "DEFINING" (LITHUB), AND "BEST" (THE PHILADELPHIA INQUIRER) BOOKS OF THE DECADE • ONE OF ESSENCE'S 50 MOST IMPACTFUL BLACK BOOKS OF THE PAST 50 YEARS • WINNER OF THE CHICAGO TRIBUNE HEARTLAND PRIZE FOR NONFICTION NAMED ONE OF THE BEST BOOKS OF THE YEAR BY The New York Times Book Review • Entertainment Weekly • O: The Oprah Magazine • NPR • Financial Times • New York • Independent (U.K.) • Times (U.K.) • Publishers Weekly • Library Journal • Kirkus Reviews • Booklist • Globe and Mail Her name was Henrietta Lacks, but scientists know her as HeLa. She was a poor Southern tobacco farmer who worked the same land as her slave ancestors, yet her cells—taken

without her knowledge—became one of the most important tools in medicine: The first “immortal” human cells grown in culture, which are still alive today, though she has been dead for more than sixty years. HeLa cells were vital for developing the polio vaccine; uncovered secrets of cancer, viruses, and the atom bomb’s effects; helped lead to important advances like in vitro fertilization, cloning, and gene mapping; and have been bought and sold by the billions. Yet Henrietta Lacks remains virtually unknown, buried in an unmarked grave. Henrietta’s family did not learn of her “immortality” until more than twenty years after her death, when scientists investigating HeLa began using her husband and children in research without informed consent. And though the cells had launched a multimillion-dollar industry that sells human biological materials, her family never saw any of the profits. As Rebecca Skloot so brilliantly shows, the story of the Lacks family—past and present—is inextricably connected to the dark history of experimentation on African Americans, the birth of bioethics, and the legal battles over whether we control the stuff we are made of. Over the decade it took to uncover this story, Rebecca became enmeshed in the lives of the Lacks family—especially Henrietta’s daughter Deborah. Deborah was consumed with questions: Had scientists cloned her mother? Had they killed her to harvest her cells? And if her mother was so important to medicine, why couldn’t her children afford health insurance? Intimate in feeling, astonishing in scope, and impossible to put down, *The Immortal Life of Henrietta Lacks* captures the beauty and drama of scientific discovery, as well as its human consequences. **Physician's Guide to Assessing and Counseling Older Drivers Nudge Improving Decisions About Health, Wealth, and Happiness** Penguin Now available: *Nudge: The Final Edition* The original edition of the multimillion-copy New York Times bestseller by the winner of the Nobel Prize in Economics, Richard H. Thaler, and Cass R. Sunstein: a revelatory look at how we make decisions—for fans of Malcolm Gladwell’s *Blink*, Charles Duhigg’s *The Power of Habit*, James Clear’s *Atomic Habits*, and Daniel Kahneman’s *Thinking, Fast and Slow* Named a Best Book of the Year by *The Economist* and the *Financial Times* Every day we make choices—about what to buy or eat, about financial investments or our children’s health and education, even about the causes we champion or the planet itself. Unfortunately, we often choose poorly. *Nudge* is about how we make these choices and how we can make better ones. Using dozens of eye-opening examples and drawing on decades of behavioral science research, Nobel Prize winner Richard H. Thaler and Harvard Law School professor Cass R. Sunstein show that no choice is ever presented to us in a neutral way, and that we are all susceptible to biases that can lead us to make bad decisions. But by knowing how people think, we can use sensible “choice architecture” to nudge people toward the best decisions for ourselves, our families, and our society, without restricting our freedom of choice. **Transportation Planning Handbook** John Wiley & Sons A multi-disciplinary approach to transportation planning fundamentals The *Transportation Planning Handbook* is a comprehensive, practice-oriented reference that presents the fundamental concepts of transportation planning alongside proven techniques. This new fourth edition is more strongly focused on serving the needs of all users, the role of safety in the planning process, and transportation planning in the context of societal concerns, including the development of more sustainable transportation solutions. The content structure has been redesigned with a new format that promotes a more functionally driven multimodal approach to planning, design, and implementation, including guidance toward the latest tools and technology. The material has been updated to reflect the latest changes to major transportation resources such as the HCM, MUTCD, HSM, and more, including the most current ADA accessibility regulations. Transportation planning has historically followed the rational planning model of defining objectives, identifying problems, generating and evaluating alternatives, and developing plans. Planners are increasingly expected to adopt a more multi-disciplinary approach, especially in light of the rising importance of sustainability and environmental concerns. This book presents the fundamentals of transportation planning in a multidisciplinary context, giving readers a practical reference for day-to-day answers. Serve the needs of all users Incorporate safety into the planning process Examine the latest transportation planning software packages Get up to date on the latest standards, recommendations, and codes Developed by The Institute of Transportation Engineers, this book is the culmination of over seventy years of transportation planning solutions, fully updated to reflect the needs of a changing society. Wade* explores the roots of the conflict, recovering through original documents and first-hand accounts the voices on both sides that helped shape the climate in which the Supreme Court ruled. Examining the role of social movements and political parties, the authors cast new light on a pivotal chapter in American history and suggest how *Roe v. Wade*, the case, because *Roe v. In today’s economy, we have far too much dismay along with our amazement, and technology bears some of the blame. In this combination of memoir, business strategy guide, and call to action, Tim O’Reilly, Silicon Valley’s leading intellectual and the founder of O’Reilly Media, explores the upside and the potential downsides of today’s WTF? technologies. What is the future when an increasing number of jobs can be performed by intelligent machines instead of people, or done only by people in partnership with those machines? What happens to our consumer based societies—to workers and to the companies that depend on their purchasing power? Is income inequality and unemployment an inevitable consequence of

technological advancement, or are there paths to a better future? What will happen to business when technology-enabled networks and marketplaces are better at deploying talent than traditional companies? How should companies organize themselves to take advantage of these new tools? What's the future of education when on-demand learning outperforms traditional institutions? How can individuals continue to adapt and retrain? Will the fundamental social safety nets of the developed world survive the transition, and if not, what will replace them? O'Reilly is "the man who can really can make a whole industry happen," according to Eric Schmidt, Executive Chairman of Alphabet (Google.) His genius over the past four decades has been to identify and to help shape our response to emerging technologies with world shaking potential—the World Wide Web, Open Source Software, Web 2.0, Open Government data, the Maker Movement, Big Data, and now AI. O'Reilly shares the techniques he's used at O'Reilly Media to make sense of and predict past innovation waves and applies those same techniques to provide a framework for thinking about how today's world-spanning platforms and networks, on-demand services, and artificial intelligence are changing the nature of business, education, government, financial markets, and the economy as a whole. He provides tools for understanding how all the parts of modern digital businesses work together to create marketplace advantage and customer value, and why ultimately, they cannot succeed unless their ecosystem succeeds along with them. The core of the book's call to action is an exhortation to businesses to DO MORE with technology rather than just using it to cut costs and enrich their shareholders. Robots are going to take our jobs, they say. O'Reilly replies, "Only if that's what we ask them to do! Technology is the solution to human problems, and we won't run out of work till we run out of problems." Entrepreneurs need to set their sights on how they can use big data, sensors, and AI to create amazing human experiences and the economy of the future, making us all richer in the same way the tools of the first industrial revolution did. Yes, technology can eliminate labor and make things cheaper, but at its best, we use it to do things that were previously unimaginable! What is our poverty of imagination? What are the entrepreneurial leaps that will allow us to use the technology of today to build a better future, not just a more efficient one? Whether technology brings the WTF? of wonder or the WTF? of dismay isn't inevitable. It's up to us!
