CONCEPTS OF BIOLOGY

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

THE BODY OF MYTH

MYTHOLOGY, SHAMANIC TRANCE, AND THE SACRED GEOGRAPHY OF THE BODY

Inner Traditions / Bear & Co Long ago the ancestors of the Greeks, Romans, and Hindus were one people living on the Eurasian steppes. At the core of their religion was the "shamanic trance," a natural state but one in which consciousness achieves a profound level of inner awareness. Over the course of millennia, the Indo-Europeans divided and migrated into Europe and the Indian subcontinent. The knowledge of shamanic trance retreated from everyday awareness and was carried on in the form of myths and distilled into spiritual practices--most notably in the Indian tradition of yoga. J. Nigro Sansonese compares the myths of Greece as well as those of the Judeo-Christian tradition with the yogic practices of India and concludes that myths are esoteric descriptions of what occurs within the human body, especially the human nervous system, during trance. In this light, the myths provide a detailed map of the shamanic state of consciousness that is our natural heritage. This book carries on from the works of Carl Jung and Joseph Campbell to show how the portrayal of consciousness embodied in myth can be extended to a reappraisal of the laws of physics; before they are descriptions of the world, these laws--like myths--are descriptions of the human nervous system.

FORMAL ONTOLOGY IN INFORMATION SYSTEMS

PROCEEDINGS OF THE EIGHTH INTERNATIONAL CONFERENCE (FOIS 2014)

IOS Press Formal Ontology in Information Systems (FOIS) is the flagship conference of the International Association for Ontology and its Applications (IAOA). Its interdisciplinary research focus lies at the intersection of philosophical ontology, linguistics, logic, cognitive science, and computer science, as well as in the applications of ontological analysis to conceptual modeling, knowledge engineering, knowledge management, information-systems development, library and information science, scientific research, and semantic technologies in general. As in previous years, FOIS 2014 was a nexus of interdisciplinary research and communication. The current proceedings is divided into four main sections, dealing with: foundations; processes, agency and dispositions; methods and tools; and applications. The last of these covers a broad spectrum of areas, including in particular biology and medicine, engineering, and economy. For the first time in its history, the conference hosted a special track: an ontology competition, the aim of which was to encourage authors to make their ontologies publicly available and to allow them to be evaluated according to a set of predetermined criteria. Papers discussing these ontologies can also be found in this volume. The book will be of interest to all those whose work involves the application of ontologies, and who are looking for a current overview of developments in formal ontology.
