## News Discourse

*Bloomsbury Publishing* **Now reissued and retypeset, this canonical book explores the role of language and images in newspaper, radio, online and television news. The authors introduce useful frameworks for analysing language, image and the interaction between the two, and illustrate these with authentic news stories from around the English-speaking world, ranging from the Oktoberfest to environmental disasters to the killing of Osama bin Laden. This analysis persuasively illustrates how events are retold in the news and made 'newsworthy' through both language and image. This clearly written and accessible introduction to news discourse is essential reading for students, lecturers and researchers in linguistics, media and journalism studies and semiotics.**

## Introduction to Ergonomics, Second Edition

*CRC Press* **When faced with productivity problems in the workplace, engineers might call for better machines, and management might call for better-trained people, but ergonomists call for a better interface and better interaction between the user and the machine. Introduction to Ergonomics, 2nd Edition, provides a comprehensive introduction to ergonomics as the study of the relationship between people and their working environment. The author presents evidence from field trials, studies and experiments that demonstrate the value of ergonomics in making the workplace safer, more error resistant, and compatible with users' characteristics and psychological and social needs. Evidence for the effectiveness of each topic is incorporated throughout the book as well, which helps practitioners to make the case for company investment in ergonomics. In addition, the author outlines international standards for ergonomics that influence engineering and design and pave the way for a more precise form of practice. Extensively revised and updated, this second edition explains the main areas of application, the science that underpins these applications, and**

demonstrates the cost-effectiveness of implementing the applications in a wide variety of work settings.

## Mammals and Birds as Bioindicators of Trace Element Contaminations in Terrestrial Environments

### An Ecotoxicological Assessment of the Northern Hemisphere

*Springer* The population explosion that began in the 1960s has been accompanied by a decrease in the quality of the natural environment, e.g. pollution of the air, water and soil with essential and toxic trace elements. Numerous poisonings of people and animals with highly toxic anthropogenic Hg and Cd in the 20th century prompted the creation of the abiotic environment, mainly in developed countries. However, the system is insufficient for long-term exposure to low concentrations of various substances that are mainly ingested through food and water. This problem could be addressed by the monitoring of sentinels - organisms that accumulate trace elements and as such reflect the rate and degree of environmental pollution. Usually these are long-lived vertebrates - herbivorous, omnivorous and carnivorous birds and mammals, especially game species. This book describes the responses of the sentinels most commonly used in ecotoxicological studies to 17 trace elements.

## Contemporary Art and Digital Culture

*Routledge* Contemporary Art and Digital Culture analyses the impact of the internet and digital technologies upon art today. Art over the last fifteen years has been deeply inflected by the rise of the internet as a mass cultural and socio-political medium, while also responding to urgent economic and political events, from the financial crisis of 2008 to the ongoing conflicts in the Middle East. This book looks at how contemporary art addresses digitality, circulation, privacy, and globalisation, and suggests how feminism and gender binaries have been shifted by new mediations of identity. It situates current artistic practice both in canonical art history and in technological predecessors such as cybernetics

and net.art, and takes stock of how the art-world infrastructure has reacted to the internet's promises of democratisation. An invaluable resource for undergraduate and postgraduate students of contemporary art - especially those studying history of art and art practice and theory - as well as those working in film, media, curation, or art education. Melissa Gronlund is a writer and lecturer on contemporary art, specialising in the moving image. From 2007-2015, she was co-editor of the journal *Afterall*, and her writing has appeared there and in *Artforum*, *e-flux* journal, *frieze*, the *NewYorker.com*, and many other places.

*University of California Press* **At publication date, a free ebook version of this title will be available through Luminos, University of California Press's Open Access publishing program. Visit [www.luminosoa.org](http://www.luminosoa.org) to learn more. The Monastery Rules discusses the position of the monasteries in pre-1950s Tibetan Buddhist societies and how that position was informed by the far-reaching relationship of monastic Buddhism with Tibetan society, economy, law, and culture. Jansen focuses her study on monastic guidelines, or bca' yig. The first study of its kind to examine the genre in detail, the book contains an exploration of its parallels in other Buddhist cultures, its connection to the Vinaya, and its value as socio-historical source-material. The guidelines are witness to certain socio-economic changes, while also containing rules that aim to change the monastery in order to preserve it. Jansen argues that the monastic institutions' influence on society was maintained not merely due to prevailing power-relations, but also because of certain deep-**

rooted Buddhist beliefs.

## The Information Paradox

## Realizing the Business Benefits of Information Technology

*McGraw-Hill* **"Considerable change has transpired in the years since the first edition of this book was published, yet the paradox remains - investments in IT-enabled business change are still not being consistently translated into business value. This is the Information Paradox - the conflict between the widely held belief that information, and investment in IT to provide that information, is a "good thing" and the all too frequent reality that we cannot demonstrate a connection between IT investments and business results." "John Thorp and Fujitsu Consulting have continued to work with many clients around the world, implementing the Benefits Realization Approach - a unique, client-tested framework that introduces a benefits-focused mindset. Their experience has led to the understanding that the issues with IT value are merely a symptom of a broader business value problem, and to the development of a new, expanded approach - Enterprise Value Management." "A completely new Afterword outlines this new approach which goes beyond the challenge of IT value to provide a comprehensive value-driven organizational governance process. It builds on the foundation of benefits realization to help organizations manage value in an increasingly uncertain and real-time business environment. It takes readers to a new level of understanding."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. All Rights Reserved**

First in the Herefordshire countryside, and later throughout Britain, Alfred Watkins noticed that beacon hills, mounds, earthworks, moats and old churches built on pagan sites seemed to fall in straight lines. His investigation convinced him that Britain was covered with a vast network of straight tracks, aligned with either the sun or the path of a star. Although traces of this network can be found all over the country, the principles behind the ley system remain a mystery. Are they the legacy of a prehistoric scientific knowledge which is now all but lost? And was their purpose secular or religious?**
