## Análisis y Diseño de Piezas con Catia

**Marcombo** Cuando hemos dibujado una pieza empleando los módulos Part Design, Wireframe & Surface Design y Assembly Design, con el programa CATIA V5 (Computer Aided Three-Dimensional Interactive), no sabemos con certeza qué va a ocurrir con nuestro modelo inicial de diseño. Nos preguntamos si este modelo previo cumplirá con las especificaciones técnicas requeridas para el uso que nos hemos planteado. Una vez maquinada la pieza, ¿resistirá la acción de las cargas aplicadas y condiciones de trabajo a las que se estará sometida cuando la usemos? Éstas y muchas otras inquietudes nos surgen en el momento de ver terminado nuestro diseño gráfico en 3D. El objetivo de este libro es proporcionar a todos los diseñadores que trabajan con CATIA V5 la posibilidad de analizar, simular y calcular piezas de maquinaria en general GPS Generative Part Structural Analysis y grupo de piezas (montajes) GAS Generative Assembly Structural Analysis, empleando el método de elementos finitos MEF o FEM (Finite Element Method), como se le conoce en inglés. El FEM se ha convertido en el método estándar más usado actualmente para la simulación numérica. CATIA V5 es uno de los mejores programas de diseño gráfico en 3D (CAD/CAM/CAE) y uno de los principales en el análisis en CAX-System. Este programa proporciona al diseñador de máquinas un ambiente de trabajo y una serie de tareas prácticas de cálculo que le permiten incursionar en las diversas plataformas de diseño de manera rápida y eficiente. Para esta segunda edición se han ampliado e incorporado algunos nuevos conceptos del GPS. Además de incluir el primer ejemplo (el ejemplo representativo del Bulón de Alojamiento) como material de trabajo para el lector, al cual podemos acceder en [www.marcombo.com](http://www.marcombo.com).

# Transdisciplinary Engineering: Crossing Boundaries

## Proceedings of the 23rd ISPE Inc. International Conference on Transdisciplinary Engineering October 3 – 7, 2016

**IOS Press** The Concurrent Engineering (CE) approach was developed in the 1980s, based on the concept that different phases of a product life cycle should be conducted concurrently and initiated as early as possible within the Product Creation Process (PCP). CE concepts have matured and become the foundation of many new ideas, methodologies, initiatives, approaches and tools. This book contains the proceedings from the 23rd ISPE Inc. International Conference on Transdisciplinary (formerly: Concurrent) Engineering, held in Curitiba, Parana, Brazil, in October 2016. The conference, entitled 'Transdisciplinary Engineering: Crossing Boundaries', provides an important forum for international scientific exchange on Concurrent Engineering and collaborative enterprises, and attracts the participation of researchers, industry experts and students, as well as government representatives. The 108 peer reviewed papers and keynote speech included here, range from theoretical and conceptual to strongly pragmatic works, which are organized into 17 sections including: Concurrent Engineering and knowledge exchange; engineering for sustainability; multidisciplinary project management; collaborative design and engineering; optimization of engineering operations and data analytics; and multidisciplinary design optimization, among others. The book gives an overview of the latest research, advancements and applications in the field and will be of interest to researchers, design practitioners and educators.

## Collaborative Multidisciplinary Design Optimization for Conceptual Design of Complex Products

**Linköping University Electronic Press** MULTIDISCIPLINARY design optimization (MDO) has developed in theory and practice during the last three decades with the aim of optimizing complex products as well as cutting costs and product development time. Despite this development, the implementation of such a method in industry is still a challenge and many complex products suffer time and cost overruns.

Employing higher fidelity models (HFMs) in conceptual design, one of the early and most important phases in the design process, can play an important role in increasing the knowledge base regarding the concept under evaluation. However, design space in the presence of HFMs could significantly be expanded. MDO has proven to be an important tool for searching the design space and finding optimal solutions. This leads to a reduction in the number of design iterations later in the design process, with wiser and more robust decisions made early in the design process to rely on. In complex products, different systems from a multitude of engineering disciplines have to work tightly together. This stresses the importance of evolving various domain experts in the design process to improve the design from diverse engineering perspectives. Involving more engineers in the design process early on raises the challenges of collaboration, known to be an important barrier to MDO implementation in industry. Another barrier is the unavailability and lack of MDO experts in industry; those who understand the MDO process and know the implementation tasks involved. In an endeavor to address the mentioned implementation challenges, a novel collaborative multidisciplinary design optimization (CMDO) framework is defined in order to be applied in the conceptual design phase. CMDO provides a platform where many engineers team up to increase the likelihood of more accurate decisions being taken early on. The structured way to define the engineering responsibilities and tasks involved in MDO helps to facilitate the implementation process. It will be further elaborated that educating active engineers with MDO knowledge is an expensive and time-consuming process for industries. Therefore, a guideline for CMDO implementation in conceptual design is proposed in this thesis that can be easily followed by design engineers with limited prior knowledge in MDO. The performance of the framework is evaluated in a number of case studies, including applications such as aircraft design and the design of a tidal water power plant, and by engineers in industry and student groups in academia.

## Koyopa: Contact Within

### The Plumed Serpent Rises

The courageous story of how one American woman transcended normal. That is, she rediscovered the natural human state beneath the past trauma and conditioning of "life as we've always known it." Her transformational story is told through the inner, feminine view of a lifetime of Angel-ET visits, and numerous Kundalini-Koyopa episodes in the physical body. The nonhuman intelligence "spoke" in frequency, and informed her of humanity's evolutionary leap in consciousness at this definitive crossroads in time. She was shown that everyone is wired within to accept, integrate, and move forward with these shifts, but it is a choice. Through a unique practice of honesty and innocence, she was guided to tune into and translate the resonance which began "filling in" the bulk of what had been conditioned out of most

of humanity - the feeling-knowing wisdom of the feminine. The more she adapted to her own signature frequency, the more she felt and understood the universal tones of nonhuman intelligence. It made for a challenging life of attempting to appear normal, even when each visit would wipe out her entire worldview. Ultimately, a critical fork-in-the-road decision needed to be made: Be true to herself and honest with her community about what she was experiencing and remembering; or squish back into the insane, tight masks and clothing of conditioning that we were taught to believe was "life." There is so much more. In the change of cycles, the Maya prophesied the Return of the Plumed Serpent. This story points to a 26,000 year old alignment - in both the cosmos and the human body. The Author states that words and concepts don't really matter in these high-vibratory states - because when they occur, you cannot think. It's more about adapting to high frequencies in the body, healing and releasing the past, practicing present-moment attention, and embracing wave after wave of body-mind-spirit upgrades. Through her lifetime of experiences and the resonant practices given through this field of Love, the author provides a roadmap for you to navigate this revolutionary contact within. Should you choose to grow up and out of the old matrix, this book has plenty of inspiration, pragmatic guidance, and encouragement.
