Investment Management Theory and Practice

Sultan Chand & Sons The motivation for the Eleventh Edition of 'Investment Management' has been provided by the enthusiastic response of the readers and reviewers to the earlier editions which, together with reprints, were sold out within a few months of the Publication. The book has been presented as an introductory level text on the theory and practice of investment. It has been accepted by the students of finance preparing for a paper on investment management, particularly the B.Com (H) Vth Semester (CBCS)/Annual Mode of University of Delhi. The highlight of the Eleventh Edition is the presentation of 'Concept Checks' in the form of 'Test-Yourself' at various places in different chapters. This will give an opportunity to the students to apply the concepts which they have read so far. Additional working notes and explanations have been provided at various places through out the book. Comments and suggestions received from students as well as teachers have been duly incorporated. In an attempt to keep intact the basic structure of the book, the chapter plan has not been changed. Nevertheless, sufficient material has been added in Chapter 6, 'Fundamental and Technical Analysis' with a view to provide more insight into technical analysis. Several numerical illustrations have been added in different Chapters at appropriate places.

Behavioral Finance: The Second Generation

CFA Institute Research Foundation Behavioral finance presented in this book is the second-generation of behavioral finance. The first generation, starting in the early 1980s, largely accepted standard finance's notion of people's wants as "rational" wants—restricted to the utilitarian benefits of high returns and low risk. That first generation commonly described people as "irrational"—succumbing to cognitive and emotional errors and misled on their way to their rational wants. The second generation describes people as normal. It begins by acknowledging the full range of people's normal wants and their benefits—utilitarian, expressive, and emotional—distinguishes normal wants from errors, and offers guidance on using shortcuts and avoiding errors on the way to satisfying normal wants. People's normal wants include financial security, nurturing children and families, gaining high social status, and staying true to values. People's normal wants, even more than their cognitive and emotional shortcuts and errors, underlie answers to important questions of finance, including saving and spending, portfolio construction, asset pricing, and market efficiency.

Artificial Intelligence in Asset Management

CFA Institute Research Foundation Artificial intelligence (AI) has grown in presence in asset management and has revolutionized the sector in many ways. It has improved portfolio management, trading, and risk management practices by increasing efficiency, accuracy, and compliance. In particular, AI techniques help construct portfolios based on more accurate risk and return forecasts and more complex constraints. Trading algorithms use AI to devise novel trading signals and execute trades with lower transaction costs. AI also improves risk modeling and forecasting by generating insights from new data sources. Finally, robo-advisors owe a large part of their success to AI techniques. Yet the use of AI can also create new risks and challenges, such as those resulting from model opacity, complexity, and reliance on data integrity.

Defined Contribution Plans: Challenges and Opportunities for Plan Sponsors

CFA Institute Research Foundation American workers rely on their employers to provide a way to generate retirement income beyond their Social Security earnings. Many employers still offer traditional defined benefit (DB) pension plans. A growing majority, however, have replaced DB plans with account-based defined contribution (DC) plans. Virtually everyone acknowledges that the basic DC plan design is flawed. Yet as a society with low private savings and a fraying Social Security system, we count on this imperfect structure to serve as a retirement security bulwark. Workers and society both need the employer-sponsored retirement system to function well. Enhancing DC plan design therefore becomes critical. *Defined Contribution Plans: Challenges and Opportunities for Plan Sponsors* offers guidance to plan sponsors interested in better understanding the primary issues confronting DC plans. We wrote this book from the viewpoint of the plan sponsor seeking to improve the DC system, and it follows five major themes: the plan participant, the plan sponsor, plan design, investments and investment managers, and asset decumulation in retirement. We present the material conversationally from a high-level perspective. We have not sought to write an encyclopedia on DC plans but rather focus on the basic features of well-run plans. We address key challenges facing DC plans and offer associated design and policy recommendations for plan sponsors and other interested parties to consider. Plan design improvements almost certainly will be incremental, rather than sweeping top-down changes mandated by regulators. Plan sponsors individually will make the important decisions that have lasting consequences for participants and for society. Our objective is to spark interest among sponsors, encouraging them to carry out additional research and take action. We believe the DC system will be strengthened by informed sponsors advocating for and implementing thoughtful strategic changes to their plans.
