THE SEMANTICS OF ENGLISH PREPOSITIONS

SPATIAL SCENES, EMBODIED MEANING, AND COGNITION

Cambridge University Press Using a cognitive linguistics perspective, this book provides a comprehensive, theoretical analysis of the semantics of English prepositions. All English prepositions originally coded spatial relations between two physical entities; while retaining their original meaning, prepositions have also developed a rich set of non-spatial meanings. In this study, Tyler and Evans argue that all these meanings are systematically grounded in the nature of human spatio-physical experience. The original 'spatial scenes' provide the foundation for the extension of meaning from the spatial to the more abstract. This analysis articulates an alternative methodology that distinguishes between a conventional meaning and an interpretation produced for understanding the preposition in context, as well as establishing which of several competing senses should be taken as the primary sense. Together, the methodology and framework are sufficiently articulated to generate testable predictions and allow the analysis to be applied to additional prepositions.

NARRATIVE ANALYSIS

Routledge An important recent development in the study of teaching is the use of narrative analysis to study teachers' lives, their work and anecdotes exchanged in the staffroom.; This book critically examines current approaches to the study of teachers' narratives and argues that, for narrative research to be effective, we need to see narrative in a multi-disciplinary perspective. The book examines models of narrative analysis currently proposed in linguistics, sociology, psychology, anthropology and literature and applies insights from these disciplines to the study of teachers' narratives. The author proposes an alternative approach to studying narratives which is then applied to original data, demonstrating how narrative analysis can be used to study primary teachers' perceptions of their work. It is suggested that narrative analysis could be used to study the perceptions or culture of any professional group.

WHAT CONTENT-AREA TEACHERS SHOULD KNOW ABOUT ADOLESCENT LITERACY

Nova Science Pub Incorporated The goal of this book is to help address middle and high school classroom teachers', administrators', and parents' immediate need for basic information about how to build adolescents' reading and writing skills. Adolescents entering the adult world in the 21st century will read and write more than at any other time in human history. They will need advanced levels of literacy to perform their jobs, run their households, act as citizens, and consider their personal lives. They will need literacy to cope with the flood of information they will find everywhere they turn. They will need literacy to feed their imagination so they can create the world of the future. Despite the call for today's adolescents to achieve higher levels of literacy than previous generations, approximately 8.7 million 4th-12th grade students struggle with the reading and writing tasks that are required of them in school. Ongoing difficulties with reading and writing figure prominently in the decision to drop out of school. These indicators suggest that literacy instruction should continue beyond the elementary years and should be tailored to the more complex forms of literacy that are required of adolescent students in middle and high school. The purpose of this book is to summarise and discuss the most recent adolescent literacy research and to describe promising research-based instructional practices that can improve an adolescent's academic reading and writing skills.

A DICTIONARY OF LITERARY SYMBOLS

COSMOLOGY

THE SCIENCE OF THE UNIVERSE

Cambridge University Press Cosmology: The Science of the Universe is an introduction to past and present cosmological theory. For much of the world's history, cosmological thought was formulated in religious or philosophical language and was thus theological or metaphysical in nature. However, cosmological speculation and theory has now become a science in which the empirical discoveries of the astronomer, theoretical physicist, and biologist are woven into intricate models that attempt to account for the universe as a whole. Professor Harrison draws on the discoveries and speculations of these scientists to provide a comprehensive survey of man's current understanding of the universe and its history. Tracing the rise of the scientific method, the major aim of this book is to provide an elementary understanding of the physical universe of modern times. Thoroughly revised and updated, this second edition extends the much acclaimed first edition taking into account the many developments that have occurred.

MASKS OF THE UNIVERSE

CHANGING IDEAS ON THE NATURE OF THE COSMOS

Cambridge University Press To the ancient Greeks the universe consisted of earth, air, fire, and water. To Saint Augustine it was the Word of God. To many modern scientists it is the dance of atoms and waves, and in years to come it may be different again. What then is the real Universe? History shows that in every age each society constructs its own universe, believing it to be the real and final Universe. Yet each universe is only a model or mask of the unknown Universe. Originally published in 2003, this book brings together fundamental scientific, philosophical, and religious issues in cosmology, raising thought-provoking questions. In every age people have pitied the universes of their ancestors, convinced that they have at last discovered the ultimate truth. Does the modern model stand at the threshold of discovering everything, or will it, like all the rest, come to be pitied?

MUSIC AS IMAGE

ANALYTICAL PSYCHOLOGY AND MUSIC IN FILM

Routledge Through a theoretical and practical exploration of Jungian and post-Jungian concepts surrounding image, this book moves beyond the visual scope of imagery to consider the presence and expression of music and sound, as well as how the psyche encounters expanded images - archetypal, personal or cultural - on both conscious and unconscious levels. By closely examining music in film, Nagari considers music's complementary, enhancing, meaningful, and sometimes disruptive, contribution to expressive images. Chapters present a Jungian approach to music in film, highlighting how 'music-image' functions both independently and in conjunction with the visual image, and suggesting further directions in areas of research including music therapy and autism. Divided into three cumulative parts, Part I explores the Jungian psychological account of the music-image; Part II combines theory with practice in analysing how the auditory image works with the visual to create the 'film as a whole' experience; and Part III implements a specific understanding of three individual film cases of different genres, eras and styles as psychologically scrutinised 'case histories'. Music as Image will be of interest to academics and students in the fields of applied psychoanalysis and Jungian psychology, music, film and cultural studies. With implications for music therapy and other art-based therapies, it will also be relevant for practising psychotherapists.

THE DEVELOPMENT OF PHILIPPINE LITERATURE IN ENGLISH SINCE 1900

THEORY OF LITERATURE

Scholarly Theory of Literature was born from the collaboration of René Wellek, a Vienna-born student of Prague School linguistics, and Austin Warren, an independently minded "old New Critic." Unlike many other textbooks of its era, however, this classic kowtows to no dogma and toes no party line. Wellek and Warren looked at literature as both a social product--influenced by politics, economics, etc.--as well as a self-contained system of formal structures. Incorporating examples from Aristotle to Coleridge, written in clear, uncondescending prose, Theory of Literature is a work which, especially in its suspicion of simplistic explanations and its distrust of received wisdom, remains extremely relevant to the study of literature today.

WAVES CALLED SOLITONS

CONCEPTS AND EXPERIMENTS

Springer Science & Business Media Nonlinearity is a fascinating element of nature whose importance has been appreciated for many years when considering large-amplitude wave motions observed in various fields ranging from fluids and plasmas to solid-state, chemical, biological, and geological systems. Localized large-amplitude waves called solitons, which propagate without spreading and have particle-like properties, represent one of the most striking aspects of nonlinear phenomena. Although a wealth of literature on the subject, including theoretical and numerical studies, is available in good recent books and research journals, very little material has found its way into introductory textbooks and curricula. This is perhaps due to a belief that nonlinear physics is difficult and cannot be taught at an introductory level to undergraduate students and practitioners. Consequently, there is considerable interest in developing practical material suitable for students, at the lowest introductory level. This book is intended to be an elementary introduction to the physics of solitons, for students, physicists, engineers and practitioners. We present the modeling of nonlinear phenomena where soliton-like waves are involved, together with applications to a wide variety of concrete systems and experiments. This book is designed as a book of physical ideas and basic methods and not as an up-to-the minute book concerned with the latest research results. The background in physics and the amount of mathematical knowledge assumed of the reader is within that usually accumulated by junior or senior students in physics.

BLOODSCRIPTS

WRITING THE VIOLENT SUBJECT

Ohio State University Press We live in an increasingly violent world. From suicide terrorists to serial killers, violent subjects challenge our imaginations. We seek answers to our questions on this subject in literature, cinema, and electronic media. In Bloodscripts, Elana Gomel examines how popular culture narratives construct violent subjectivity. Using such various narratives as mystery, horror, detective, and fantasy fiction as well as accounts of the atrocities perpetuated by serial killers and the Holocaust, Bloodscripts offers a new map of the genres of violence and links the twin obsessions of postmodern culture: crime and genocide. Bloodscripts is a stimulating, original, and accessible account of the narrative construction of the violent subject. It proposes a narrative model that will be of interest to literary critics, cultural scholars, criminologists, and anyone trying to understand the role of violence in postmodern culture.

THE PILGRIM SOUL

BEING RUSSIAN IN ISRAEL

Cambria Press The story of the post-Soviet Jews in Israel illustrates a general phenomenon of cultural divergence, in which history carves different identities out of common stock. Besides marking a turning point in the development of Israel, it belongs to the larger picture of the contemporary world, profoundly marked by the collapse of the catastrophic utopias of Nazism and Communism. And yet this story has not adequately been dealt with by the academy. There have been relatively few studies of the Russian immigration to Israel and none that situates the phenomenon in a cultural, rather than purely sociological, context.

ALIEN THEORY

THE ALIEN AS ARCHETYPE IN THE SCIENCE FICTION SHORT STORY

From the early days of pulp magazines to contemporary works of science fiction, the subject of the alien has been a fertile and enduring--if not also the most vital--element of the genre. In *Alien Theory*, author Patricia Monk asserts that the creation of the alien in short fiction contributes substantially to humanity's understanding of its present status and future potential in the universe. By employing a Jungian and archetypal approach to these stories, Monk attempts to direct the attention of readers to the significance of the vast body of imaginative fiction about the alien, arguing that studying the alien will reveal why this archetype is necessary in the development of humanity's understanding of its own intrinsic nature as a sapient being. When a science fiction writer writes about aliens, Monk asserts, he or she is saying something that can--and should--be taken seriously by readers. Furthermore, it is being expressed in a particular story-telling mode that deserves to be treated with respect. By discussing the creation of the form of the science-fictional alien, its psyche and the context in which aliens and humans interact, Monk brings into focus a topic that has not been given the rightful discussion it deserves. In addition to examining the alien in the science fiction short story, novella, and novelette, Monk evaluates its role in pre-postmodernist and postmodernist criticism and theory. The author also draws on relevant writings by editors, writers, and fans--including editorial letter columns and reviews--to place the stories in the context of science fiction. By drawing on all of these sources, *Alien Theory* brings into focus a topic that will be of interest not only to academics and students, but also to the general reader.
