## INTEGRATED MANAGEMENT OF DISEASES CAUSED BY FUNGI, PHYTOPLASMA AND BACTERIA

---

**Springer Science & Business Media** *This volume focuses on integrated pest and disease management (IPM/IDM) and biocontrol of some key diseases of perennial and annual crops. It continues a series originated during a visit of prof. K. G. Mukerji to the CNR Plant Protection Institute in Bari (Italy), in November 2005. Both editors aim at a series of five volumes embracing, in a multi-disciplinary approach,*

advances and achievements in the practice of crop protection, for a wide range of plant parasites and pathogens. Two volumes of the series were already produced, dedicated to general concepts in IPM and to management and biocontrol of nematodes of grain crops and vegetables. This Volume deals, in particular, with diseases due to bacteria, phytoplasma and fungi. Every day, in any agroecosystem, farmers face problems related to plant diseases. Since the beginning of agriculture, indeed, and probably for a long time in the future, farmers will continue to do so. Every year, plant diseases cause severe losses in the global production of food and other agricultural commodities, worldwide. Plant diseases are not limited to episodic events occurring in single farms or crops, and should not be regarded as single independent cases, affecting only farms on a local scale. The impact of plant disease epidemics on food shortage ignited, in the last two centuries, deep cultural, social and demographic changes, affecting million human beings, through i. e. migration, death and hunger.

## **ABIOTIC AND BIOTIC STRESS IN PLANTS**

---

### **RECENT ADVANCES AND FUTURE PERSPECTIVES**

---

**BoD - Books on Demand** *The impact of global climate change on crop production has emerged as a major research priority during the past decade. Understanding abiotic stress factors such as temperature and drought tolerance and biotic stress tolerance traits such as insect pest and pathogen resistance in combination with high yield in plants is of paramount importance to counter climate change related adverse effects on the productivity of crops. In this multi-authored book, we present synthesis of information for developing strategies to combat plant stress. Our effort here is to present a judicious mixture of basic as well as applied research outlooks so as to interest workers in all areas of plant science. We trust that the information covered in this book would bridge the much-researched area of stress in plants with the much-needed information for evolving climate-ready crop cultivars to ensure food security in the future.*

### **PRODUCTION AND PACKAGING OF NON-CARBONATED FRUIT JUICES AND FRUIT BEVERAGES**

---

**Springer Science & Business Media** *In the period of about five years since the first edition of this book appeared, many changes have occurred in the fruit juice and beverage markets. The growth of markets has continued, blunted to some extent, no doubt, by the recession that has featured prominently in the economies of the major consuming nations. But perhaps the most significant area that has*

affected juices in particular is the issue of authenticity. Commercial scandals of substantial proportions have been seen on both sides of the Atlantic because of fraudulent practice. Major strides have been made in the development of techniques to detect and measure adulterants in the major juices. A contribution to Chapter 1 describes one of the more important scientific techniques to have been developed as a routine test method to detect the addition of carbohydrates to juices. Another, and perhaps more welcome, development in non-carbonated beverages during the past few years is the rapid growth of sports drinks. Beverages based on glucose syrup have been popular for many years, and in some parts of the world isotonic products have long featured in the sports arena. A combination of benefits is now available from a wide range of preparations formulated and marketed as sports drinks and featuring widely in beverage markets world-wide. A new chapter reviews their formulation and performance characteristics. Another major trend in the area of fruit-containing non-carbonated beverages is the highly successful marketing of ready-to-drink products.

### **HISTORY OF THE UNITED STATES SINCE 1877**

---

**Cognella Academic Publishing** *The Education of Henry Adams meets On the Road in Making History: A Personal Approach to Modern American History. This unique text takes a personal approach to American history. It gets readers excited about their own roles in making history and empowers them to make changes for the betterment of their country. Making History begins with the important point that while most standard textbooks refer to events that have shaped America, these events didn't happen to America - they happened to individual Americans. It is individuals who give their lives in armed conflicts and lose their homes during financial downturns. With this perspective in mind, students are prepared to read and think differently about post-Civil War history, including industrialization, the Spanish-American War and World Wars, the Depression, the Cold War, the Civil Rights Era, Vietnam, the rise of modern conservatism, and the country's current state of decline. With its non-traditional take on events and their impacts, Making History is a fresh alternative for survey courses in American history and historiography or classes in American civilization.*
