This research analyzes CCTV from the situational crime prevention perspective that the installation of CCTV might alter the behavior of potential offenders by blocking their opportunities to offend. The study also integrates CCTV with the routine activities approach by examining whether CCTV operates as a manager or a guardian. Additionally, the study expands the previous literature by analyzing the impact of CCTV on disorder. To capture the impact on disorder, this study uses police calls for service data to measure the impact of CCTV at monitored locations before and after the installation of the cameras. Bivariate regression models were calculated for specific and composite calls for service. The installation of CCTV resulted in a general reduction in all calls for service and in particular a decrease in disorder calls for service. Unlike British research, little support was found for reductions in specific types of crime. Some of the findings may be influenced by the differences in the set up and utilization of CCTV between the two countries. This research also indicates that CCTV could be better described as a manager than a guardian. **CCTV Networking and Digital Technology** Elsevier Closed circuit television (CCTV) is experiencing a leap in technology using digital techniques, networking and the Internet. The new edition of this high-level professional reference retains the particulars that made the first edition a success, including the details of CCD cameras, lenses, coaxial cables, fiber-optics, and system design, but it is expanded to cover all video compression techniques used in the ever increasing assortment of digital video recorders (DVRs) available on the market today. This new edition of the book CCTV demystifies DVR technology. It also serves to clarify the technology of data networking. The theoretical section explains the various compression techniques.
