AN INTRODUCTION TO STATISTICAL LEARNING

WITH APPLICATIONS IN R

Springer Science & Business Media An Introduction to Statistical Learning provides an accessible overview of the field of statistical learning, an essential toolset for making sense of the vast and complex data sets that have emerged in fields ranging from biology to finance to marketing to astrophysics in the past twenty years. This book presents some of the most important modeling and prediction techniques, along with relevant applications. Topics include linear regression, classification, resampling methods, shrinkage approaches, tree-based methods, support vector machines, clustering, and more. Color graphics and real-world examples are used to illustrate the methods presented. Since the goal of this textbook is to facilitate the use of these statistical learning techniques by practitioners in science, industry, and other fields, each chapter contains a tutorial on implementing the analyses and methods presented in R, an extremely popular open source statistical software platform. Two of the authors co-wrote The Elements of Statistical Learning (Hastie, Tibshirani and Friedman, 2nd edition 2009), a popular reference book for statistics and machine learning researchers. An Introduction to Statistical Learning covers many of the same topics, but at a level accessible to a much broader audience. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

SCIENCE, WORLDVIEWS AND EDUCATION

REPRINTED FROM THE JOURNAL SCIENCE & EDUCATION

Springer Science & Business Media This book has its origins in a special issue of the journal *Science & Education* (Volume 18 Numbers 6-7, 2009). The essay by Costas Skordoulis - 'Science and Worldviews in the Marxist Tradition' - did not appear in that special issue due to a mistake in production scheduling. It was published in an earlier issue of the journal (Volume 17 Number 6, 2008), but has been included in this book version of the special issue. As explained in the Introduction, the catalyst for the journal special issue was the essay on 'Science, Worldviews and Education' submitted to the journal by Hugh G. Gauch Jr. This was circulated to the other contributors who were asked to write their own contribution in the light of the arguments and literature contained in the paper. Hugh made brief 'Responses and Clarifications' after the papers were written. However the Tanis Edis article on Islam and my own article on Priestley were processed too late to benefit from Hugh's appraisal. The journal is associated with the International History, Philosophy, and Science Teaching Group which was formed in 1987. The group stages biennial international conferences and occasional regional conferences (details can be found at www.ihpst.org). The group, through the journal, conferences, and its electronic newsletter (at www.ihpst.org).
