Pain Management in the Postpartum Period, an Issue of Clinics in Perinatology

Elsevier Health Sciences This issue of **Clinics in Perinatology** will carry the reader through the perinatal period and examine pain management throughout that continuum. Beginning with the genetics of obstetrical pain and opioid use in pregnancy, the discussion moves to the provision of anesthesia to the mother and fetus during fetal surgery - an area of intense concern and interest in many centers. There is an extensive discussion of both pharmacologic and non-pharmacologic management of pain during delivery. A discussion of regional anesthetic techniques is increasingly relevant in light of increasing evidence of adverse neurodevelopmental consequences of fetal exposure to general anesthetics and sedatives. Pain, its implications and management, are extensively covered including discussions of how to assess neonatal pain and how best to provide sedation and non-pharmacologic pain management, systemic pharmacologic, or regional techniques. Of particular interest are the reviews of the potential neurodevelopmental impact of both the treatment and the failure to adequately treat pain in the newborn. This topic is receiving an enormous amount of attention from all those who care for children as well as government and the media.

Birth Settings in America Outcomes, Quality, Access, and Choice

National Academies Press The delivery of high quality and equitable care for both mothers and newborns is complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. *Birth Settings in America: Outcomes, Quality, Access, and Choice* reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings.

Obstetric Anaesthesia and Analgesia Related Complications in Czech and Slovak Republics: National Observational Survey in 2015

Background and Goal of Study In the year 2011 OBAAMACZ study described anaesthesiological practice for obstetric anaesthesia and analgesia in the Czech Republic. One of the objectives of the OBAAMAIN study performed in the year 2015 was to describe obstetric anaesthesia and analgesia related complications in the Czech (CZ) and Slovak Republics (SR). **Materials and Methods** Obstetric Anaesthesia and Analgesia Month Attributes International (OBAAMAIN) was held on anaesthetic departments throughout the CZ and SR. With Ethical Committees Approval we aimed to enroll all 149 obstetric departments in CZ and SR and to monitor every case of anaesthetic care in peripartum period and all anaesthesia and analgesia related complications during November 2015. Data were recorded to Case Report Form with two parts (Demography 2014 and Case Report) into CLADEIS (Masaryk University, CZ). The data were described descriptively (mean, median, SD). Fisher's exact test was used in case of categorical variables (SPSS 23, IBM). **Results and Discussion** During the study period, we enrolled 105 participating centers (70 in CZ and 35 in SR) and 3 590 valid cases. Caesarean Section (CS) was recorded in 2 548 cases (71.0%), 1158 cases (31.4%) were obstetric analgesia and 181 cases (5.0%) were early postpartum procedures. The most preferred type of anaesthesia for CS was neuraxial anaesthesia (62.5%) spinal in 87.5%. Most frequent complications related to general anaesthesia were difficult airways (1.4%) at the induction, hypertension (7.9%) and tachycardia (5.2%) during the anaesthesia. Complications related to spinal or epidural anaesthesia were more than 1 attempt to achieve neuraxial space (23.6% and 16.1%), blood in the needle (1.9% and 1.0%), paresthesia (1.3% and 1.0%) and high blockade (0.4% and 0.5%). Epidural labor analgesia rate was 11.1%. For epidural labor analgesia the most frequent complication was more than 1 attempt to achieve epidural space (15.5%), blood in the needle or catheter (3.1%) and unattended dural puncture (0.7%). Postpuncture headache was recorded in 1.2% overall. In case of epidural labor analgesia it was more frequently associated with multiple attempts ($p=0.007$) and unattended dural puncture (p

Guidebook to Low Back Pain

Diagnosis and Treatment

Dr. Margaret Aranda's newest book is an important reference book for those suffering with intractable low back pain. Such pain leads most patients on a quest, undergoing multiple procedures to resolve the pain. You can understand what kinds of problems certain diagnoses have, and you and your doctor can work together to get your diagnosis. For example, if you had an epidural steroid injection, you may be suffering from a pain syndrome called spinal adhesive arachnoiditis (SAA). If your low back pain is heralded by 24/7 pain, this book is for you. If it is accompanied by burning pain, trouble urinating or passing stool, getting full fast after eating, headaches or migraines, dizziness after standing up, or difficulties having a libido or declining sex performance, this book is for you. If you had an epidural steroid injection that changed your life or are pregnant and thinking of having an

epidural for labor pain, the same difficulties can affect you; this book is also for you. If you were highly flexible as a child and had back instrumentation by surgery or an epidural, you may be more prone to suffer subsequent deleterious effects, and this is a must-have book. This book is part of Dr. Aranda's Rebel Patient(TM) Series. Margaret Aranda, MD, PhD brings a unique mix of academia, research, personal experience, and clinical care to her seventh book. After graduating Keck USC School of Medicine, she did her anesthesiology residency and then a critical care Fellowship at Stanford. From there, she went on to become Chief of Anesthesiology at the Philadelphia VA Medical Center, as Assistant Professor at the University of Pennsylvania in three departments: Anesthesiology and Perioperative Medicine, Surgery and Traumatology, and Radiology. She then served our Veterans again at the West Los Angeles VA Medical Center as Chief of the Surgical Intensive Care Unit, as Assistant Professor of Anesthesiology at UCLA School of Medicine. Dr. Aranda is a Stanford and Keck-USC trained physician with specialty training in anesthesiology and critical care. After recovery from a traumatic brain injury, she assumed a pain clinic and is a national referral center for failed back syndrome. The best news is that most patients are diagnosed with the same set of problems, making your future care streamlined and protocolized for a new lease on life. She is the creator of the Rebel Patient(TM) Series of books.

Obstetric Analgesia and Anesthesia

A Manual for Physicians, Nurses and Other Health Personnel, Prepared for the World Federation of Societies of Anaesthesiologists

Springer The provision of the best possible anesthetic care to the-greatest number of patients all over the world has always been the main goal of the World Federation of Societies of Anaesthesiologists. In addition to the establishment of Regional Anesthesiology Training Centers and the organization of Regional and World Congresses, the distribution of practical monographs on some important aspects of anesthesiology were considered important for the attainment of this objective. In 1968, on the occasion of the Fourth World Congress of Anesthesiology, held in London, a monograph on "Emergency Resuscitation", compiled by the Committee on Cardiopulmonary Resuscitation, chaired by Professor HENNING POULSEN, was made available to our membership. Subsequently, this excellent monograph was translated into Spanish, Russian, German and French and to this date over 100,000 copies of it have been distributed to anesthesiologists and other interested physicians the world over. When looking for a suitable topic for a second monograph to commemorate the 1972 World Congress of Anesthesiology to be held in Kyoto this September, the subject of Obstetric Analgesia and Anesthesia was the first choice of almost everyone consulted. For reasons that are hard to condone, obstetric analgesia and anesthesia has often been the step child among the anesthetic subspecialties.

Principles and Practice of Obstetric Anaesthesia

Wiley-Blackwell Obstetric anaesthesia is a specialized practice and covers the entire range of pain relief throughout normal labor as well as general anaesthesia for special procedures such as caesarian section. While there is a specialist group based at main teaching centers who practice obstetric anaesthesia exclusively, the majority of anaesthetists are based at smaller hospitals where there is no such specialist. Consequently, it is essential that all anaesthetists are familiar with the anaesthetic requirements of normal labor, and of all but the most extreme cases of abnormal labor. While this book is written for the specialist in obstetric anaesthesia, it is also ideal for trainee anaesthetists. It provides enough information for the final FRCA examination, but also contains sufficient detail on the various clinical problems that may present at any stage in their future career. The underlying principle is that the anaesthetist must understand the physiology of labor in normal and abnormal situations as well as the interventions of his obstetric colleagues in order to practice safely and effectively. The book will replace J. Selwyn Crawford's text, which presented a personal view, backed by his extensive research experience of obstetric anaesthesia.

Regional Opioid Analgesia

Physiopharmacological Basis, Drugs, Equipment and Clinical Application

Springer Science & Business Media by E.K. ZSIGMOND, M.D. Department of Anesthesiology University of Illinois Chicago U.S.A. It is, indeed, a distinct honor and privilege to be invited by the authors to write a preface to this monumental monograph, Regional Opioid Analgesia. Regional Opioid Analgesia is a colossal undertaking by Drs. De Castro, Meynadier and Zenz shortly after the introduction of this revolutionary approach to pain relief which opened a new epoch in analgesiology. This is, indeed, the first authentic and comprehensive textbook encompassing the current knowl edge on this novel approach to pain relief. We are indebted to the authors for introducing the new opioids to regional analgesia with the scientists, who de veloped the potent short and ultrashort acting opioids with high therapeutic indices, which many researchers dreamt about but never before materialized. The side effect liabilities of these new opioids are minute as compared to morphine and meperidine. Regional Opioid Analgesia could not have been more authentically written than by Drs. De Castro,Zenz and Meynadier,who have conducted daily clinical investigations on all known opioids for regional analgesia as well as for neurolept analgesia. Therein lies the great value of this monograph: it is the most authentic work on this topic.
