THEORIES OF HUMAN DEVELOPMENT

Psychology Press Intended for courses on theories of human development, this new text presents nine theories grouped into three major families - those that emphasize biological systems; those that emphasize environmental factors; and those that emphasize a

dynamic interaction between biological and environmental forces. The nine theories selected have a long and productive history in human development and continue to evolve as a result of new insights. The inclusion of social role theory and life course theory expand the book's relevance to the study of adulthood and aging. Grouping the theories by families enhances students' ability to think critically about theoretical ideas, assess the strengths and weaknesses of each theory, and gain a deeper understanding of how each theory guides research and application. The three families are introduced with a brief overview of the unique perspectives of each theory and the rationale for grouping these theories together. Discussion of each theory includes: the historical and cultural context in which the theory was developed; an overview of key concepts and important ideas; new directions in contemporary scientific work; a research example illustrating how the theory has been tested and modified; an application showing how the theory has guided the design of an intervention or program; an analysis of how the theory answers basic questions about human development; and a critique highlighting the theories' strengths and weaknesses. *Theories of Human Development* serves as a text in advanced undergraduate and/or beginning graduate courses in theories of human development. LIFE-SPAN DEVELOPMENT

FRAMEWORKS, ACCOUNTS AND STRATEGIES

Routledge This thorough revision of the highly successful first edition of *Life-Span Development* offers the reader a wide-ranging and thought provoking account of human development throughout the lifespan. The lifespan approach emphasizes that development does not stop when we cease to be adolescents but goes on throughout adulthood and into old age. In initial chapters Leonie Sugarman outlines the issues surrounding the notion of development and how it can be studied, including reviews of the work of key theorists Erikson, Levinson and Gould. She goes on to consider the different ways in which the life course can be construed: as a series of age-related stages; as a cumulative sequence; as a series of developmental tasks; as a series of key life events and transitions or as a narrative construction which creates a sense of dynamic continuity. A final chapter looks at how people cope, the resources that are available and the theoretical and practical issues regarding interventions to assist them in the process. New to this edition is increased coverage of the topical issue of successful ageing and a new chapter on the increasingly popular narrative approach to lifespan development. This edition is also more student-friendly with exercises in self-reflection that encourage the reader to look at the development of their own lives or those of their current or future clients. Boxed material highlighting major theories and clarifying concepts is also included. This book will be invaluable for students of developmental and occupational psychology and professionals in the fields of health management, education and social work.

HANDBOOK OF INTRAINDIVIDUAL VARIABILITY ACROSS THE LIFE SPAN

Routledge Intraindividual variability (IIV) of human development and behavior across the entire life-span is explored in this new book. Leading researchers summarize recent findings on the extent, role, and function of IIV in human development with a focus on how, when, and why individuals change over time. The latest theoretical, methodological, and technological advances are reviewed. The book explores the historical and theoretical background and challenges of IIV research along with its role and function in childhood, adolescence, and adulthood. Edited to maximize consistency and accessibility, each chapter includes an introduction and a review of the research and most explore future directions, new theoretical developments, and conclusions and implications. Readers are shown that by focusing on the individual as a unit of analysis across different time scales, conditions, and situations, researchers can effectively demonstrate behavioral and developmental regularities at different points of the life-span. As such this book is a must have for anybody interested in IIV research. The book explores: -New designs and methods for the analysis of intensive repeated measures data. -The importance of real-time data for more time sensitive and ecologically valid measurements. -The role and function of intraindividual variability in behavior and development across the life-span -- from infancy to later life. -Numerous examples of how intraindividual variability research is conducted. -Topics and findings that are commonly treated in disparate bodies of literature from various disciplines. Part 1 provides a historical, conceptual, and methodological overview of the study of intraindividual variability (IIV). IIV during childhood and adolescence and its application in the investigation of development of language acquisition, infant-parent interactions, development of motor skills, cognitive development, mood regulation, and identity development are examined in Part 2. Part 3 focuses on IIV during adult development, including its use in neuropsychological functioning and attention and in personality development and mood regulation. IIV in the context of adults' health behavior is also reviewed. Part 4 examines the key issues and challenges of IIV research in human development such as whether IIV in adult development is an indicator of vulnerability or resilience, the association between short-term IIV and long-term developmental change, and multiple time-scale design and analysis. The volume concludes with a look at the future of intraindividual variation analysis. Intended for advanced students and researchers in developmental psychology across the life-span, social, personality, and health psychology, as well as sociology, family studies, gerontology, education, and medicine, interested in intraindividual variability of behavior and its role in human development, this book also serves as a text for graduate courses on longitudinal analysis, multilevel modeling, and/or (advanced) data analysis offered in these departments.
