These companies play an important role in providing credit to the unorganised sector and to the small borrowers at the local level. Hire purchase finance is by far the largest activity of NBFCs. NBFCs have been the subject of focussed attention since the early 1990s. The rapid growth of NBFCs has led to a gradual blurring of dividing lines between banks and NBFCs, with the exception of the exclusive privilege that commercial banks exercise in the issuance of cheques. NBFCs are widely dispersed across the country and their management exhibits varied degrees of professionalism. Furthermore, the depositors have varied degrees of perceptions regarding safety of their deposits while making an investment decision. This book provides an exhaustive account of the functioning of and recent reforms pertaining to NBFCs in India. It also includes an all-India list (as on January 15, 2010) of 314 NBFCs which have been issued certificates of registration by the Reserve Bank of India to hold/accept deposits from public. **Comparing Financial Systems** MIT Press The authors argue that the view that market-based systems are best is simplistic; a more nuanced approach is necessary. Financial systems are crucial to the allocation of resources in a modern economy. They channel household savings to the corporate sector and allocate investment funds among firms; they allow intertemporal smoothing of consumption by households and expenditures by firms; and they enable households and firms to share risks. These functions are common to the financial systems of most developed economies. Yet the form of these financial systems varies widely. In the United States and the United Kingdom competitive markets dominate the financial landscape, whereas in France, Germany, and Japan banks have traditionally played the most important role. Why do different countries have such different financial systems? Is one system better than all the others? Do different systems merely represent alternative ways of satisfying similar needs? Is the current trend toward market-based systems desirable? Franklin Allen and Douglas Gale argue that the view that market-based systems are best is simplistic. A more nuanced approach is necessary. For example, financial markets may be bad for risk sharing; competition in banking may be inefficient; financial crises can be good as well as bad; and separation of ownership and control can be optimal. Financial institutions are not simply veils, disguising the allocation mechanism without affecting it, but are

crucial to overcoming market imperfections. An optimal financial system relies on both financial markets and financial intermediaries. **Emerging Financial Markets** *Excel Books India* **Emerging Financial Markets** is organized into three sections namely; *) Financial Markets & Instruments, *) Behavioural Finance , *) Banking .
