### LAXATIVES

---

---

### A PRACTICAL GUIDE

---

[Springer Science & Business Media](#) Constipation is a common disorder that is often defined differently by patients and physicians. Clinically, constipation occurs when bowel movements are difficult or painful. The "normality" of bowel movements, in terms of frequency, varies among individuals; frequency that is thought by one person to be constipation may be reported by another to be usual and thus normal. Often the perceived "need" to have a bowel movement leads to self-treatment with laxatives as these drugs are widely available without a prescription. This situation can raise problems in patient care, because of potential interactions between laxatives and other medications. Furthermore, chronic use (abuse) of laxatives can cause serious medical consequences, causing patients to visit physicians, and even to be hospitalized for further evaluation and care. This has a financial impact on the patient, and on health care systems. It is essential that pharmacists, physicians and other health care practitioners counsel patients on the causes of constipation and the proper use of laxatives. A medical work-up by a physician should be done to determine if the constipation is due to a pathological process. Often normal bowel function (for an individual) can be maintained by diet and/or lifestyle. Most laxatives in use today are of botanical origin. Further research on the mechanism of action of these and synthetic laxatives is needed to better define their pharmacology and toxicology.

### ANDEAN COCAINE

---

---

### THE MAKING OF A GLOBAL DRUG

---

[Univ of North Carolina Press](#) Illuminating a hidden and fascinating chapter in the history of globalization, Paul Gootenberg chronicles the rise of one of the most spectacular and now illegal Latin American exports: cocaine. Gootenberg traces cocaine's history from its origins as a medical commodity in the nineteenth century to its repression during the early twentieth century and its dramatic reemergence as an illicit good after World War II. Connecting the story of the drug's transformations is a host of people, products, and processes: Sigmund Freud, Coca-Cola, and Pablo Escobar all make appearances, exemplifying the global influences that have shaped the history of cocaine. But Gootenberg decenters the familiar story to uncover the roles played by hitherto obscure but vital Andean

actors as well--for example, the Peruvian pharmacist who developed the techniques for refining cocaine on an industrial scale and the creators of the original drug-smuggling networks that decades later would be taken over by Colombian traffickers. Andean Cocaine proves indispensable to understanding one of the most vexing social dilemmas of the late twentieth-century Americas: the American cocaine epidemic of the 1980s and, in its wake, the seemingly endless U.S. drug war in the Andes.

### CRITICAL NEW PERSPECTIVES ON ADHD

---

[Routledge](#) Experts from all over the world take a critical, highly international and often controversial perspective on the ADHD phenomenon - a condition that has reached global proportions, significantly affecting the lives of children, parents and teachers worldwide. This book raises a number of concerns often not covered by the material currently available to parents and practitioners. Critical New Perspectives on ADHD unpicks the myths surrounding the development of this phenomenon and leaves no stone unturned in its search for answers. An in-depth exploration into the reasons for the emergence and maintenance of ADHD lead to suggested explanations of the dominance of US psychiatric models and the need for new markets for major pharmaceutical companies, as well as the functions that ADHD diagnoses fulfil in families, classrooms and communities. In a world where moves to educational inclusion are paradoxically paralleled by the ever-increasing use of medication to control children's behaviour, this book scrutinises current accepted practice and offers alternative perspectives and strategies for teachers and other education professionals. This in an invaluable resource for anyone with a serious interest in ADHD and other behavioural difficulties.

#### DAVIDSON'S PRINCIPLES AND PRACTICE OF MEDICINE E-BOOK

---

[Elsevier Health Sciences](#) More than two million medical students, doctors and other health professionals from around the globe have owned a copy of Davidson's Principles and Practice of Medicine since it was first published. Today's readers rely on this beautifully illustrated text to provide up-to-date detail of contemporary medical practice, presented in a style that is concise and yet easy to read. Davidson's provides the factual knowledge required to practise medicine, explaining it in the context of underlying principles, basic science and research evidence, and shows how to apply this knowledge to the management of patients who present with problems rather than specific diseases. The book has won numerous prizes including being highly commended in the British Medical Association book awards. Davidson's global perspective is enhanced by the input of an international team of authors and a distinguished International Advisory Board from 17 countries. Building on the foundations laid down by its original editor, Davidson's remains one of the world's leading and most respected textbooks of medicine. The underlying principles of medicine are described concisely in the first part of the book, and the detailed practice of medicine within each sub-specialty is described in later system-based chapters. Most chapters begin with a two-page overview of the important elements of the clinical examination, including a manikin to illustrate the key steps in the examination of the relevant system. A practical, problem-based clinical approach is described in the 'Presenting Problems' sections, to complement the detailed descriptions of each disease. The text is extensively illustrated, with over 1000 diagrams, clinical photographs, and radiology and pathology images. 1350 text boxes present information in a way suitable for revision, including 150 clinical evidence boxes summarising the results of systematic reviews and randomised controlled trials and 65 'In Old Age' boxes highlighting important aspects of medical practice in the older population. A combined index and glossary of medical acronyms contains over 10 000 subject entries. The contents can also be searched comprehensively as part of the online access to the whole book on the StudentConsult platform. Access over 500 self-testing questions with answers linked to the book's content for further reading. The text uses both SI and non-SI units to make it suitable for readers throughout the globe. A new chapter specifically on Stroke Disease recognises the emergence of Stroke Medicine as a distinct clinical and academic discipline. A rationalisation of the 1350 boxes used throughout the book gives a simpler and clearer presentation of the various categories. New 'In Adolescence' boxes recognise the fact that many chronic disorders begin in childhood and become the responsibility of physicians practising adult medicine. These boxes acknowledge the overlap 'transitional' phase and highlight the key points of importance when looking after young people. The regular introduction of new authors and editors maintains the freshness of each new edition. On this occasion Dr Ian Penman has joined the editorial team and 18 new authors bring new experience and ideas to the content and presentation of the textbook. An expanded International Advisory Board of 38 members includes new members from several different countries.

#### HOSPITAL-BASED HEALTH TECHNOLOGY ASSESSMENT

---

---

#### THE NEXT FRONTIER FOR HEALTH TECHNOLOGY ASSESSMENT

---

[Springer](#) A timely work describing how localized hospital-based health technology assessment (HB-HTA) complements general, 'arms-length' HTA agency efforts, and what has been the collective global impact of HB-HTA across the globe. While HB-HTA has gained significant momentum over the past few years, expertise in the field, and information on the operation and organization of HB-HTA, has been scattered. This book serves to bring this information together to inform those who are currently working in the field of HTA at the hospital, regional, national or global level. In addition, this book is intended for decision-makers and policy-makers with a stake in determining the uptake and decommissioning of new and established technologies in the hospital setting. HTA has traditionally been performed at the National/Regional level by HTA Agencies, typically linked to governments. Yet hospitals are the main entry door for most health technologies (HTs). Hospital decision-makers must undertake multiple high stakes investment and disinvestment decisions annually for innovative HTs, usually without adequate information. Despite the existence of arms-length HTA Agencies, inadequate information is available to hospital decision-makers either because relevant HTA reports are not yet released at the time of entry of new technologies to the field, or because even when the report exists, the information contained is insufficient to clarify the contextualized informational needs of hospital decision makers. Therefore, there has recently been a rising trend toward hospital-based HTA units and programs. These units/programs complement the work of National/Regional HTA Agencies by providing the key and relevant evidence needed by hospital decision makers in their specific hospital context, and within required decision-making timelines. The emergence of HB-HTA is creating a comprehensive HTA ecosystem across health care levels, which creates better bridges for knowledge translation through relevance and timeliness.

#### HOW HEALTH PROFESSIONALS CAN WORK FOR A LESS VIOLENT WORLD

---

[Kumarian Press](#) We typically define and talk about wars using the language of politics, but what happens when you bring in a doctor's perspective on conflict? Can war be diagnosed like an illness? Can health professionals participate in its mitigation and prevention? The contributors to Peace through Health: How Health Professionals Can Work for a Less Violent World engage with these ground-breaking ideas and describe tools that can further peace once war is understood as a public health problem. The idea of working for peace through the health sector has sparked many innovative programs, described here by over 30 experts familiar with the theory and practice of Peace through Health. They cover topics such as prevention and therapy, program evaluations, medical ethics, activism, medical journals, human rights, and the uses of epidemiology. Those considering careers in medicine and other health and humanitarian disciplines as well as those concerned about the growing presence of militarized violence in the world will value the book's many insights Other Contributors: Will Boyce, Caecilie Buhmann, Anne BundeBirouste, Kenneth Bush, Helen Caldicott, Rob Chase, Khagendra Dahal, Hamit Dardagan, Ann Duggan, Lowell Ewert, Paul Farmer, Norbert Goldfield, Paula Gutlove, Katherine Kaufer Christoffel, Maria Kett, John Last, Barry S.
