A SURVEY OF THE LEPIDOPTERA, BIOGEOGRAHY AND ECOLOGY OF NEW CALEDONIA

Springer Science & Business Media I spent four months in New Caledonia in 1971 with the object of making a quantitative survey of the night-flying macrolepidoptera with light-traps and an assessment of the Rhopalocera and microlepidoptera. This fieldwork was financed by a Government Grant-in-Aid for Scientific Investigations administered by the Royal Society, and by a grant from the Godman Fund. I devoted a further three weeks to sampling on Norfolk I., and, with the help of local naturalists, Mr. and Mrs. F. JOWETT, was able to produce a detailed account of the biogeography and ecology of the moth fauna (HOLLOWAY, 1977). This book is an account of the results of the New Caledonian work, together with reviews of the geology, phytogeography and general zoogeography presented as background for the Lepidoptera fauna and its geography. Previous work on the macroheterocera, primarily papers by VIETTE (1948-1971), had recorded not many more than a hundred species, a very low total considering the area of the island relative to that of the Fiji group where the moths were being studied by Dr. G. S. ROBINSON when the New Caledonian expedition was at the planning stage. The Fijian fauna then promised consider ably to exceed three hundred species. Evidently many more species awaited discovery in New Caledonia.

THE FAST PATH TO CORPORATE GROWTH

LEVERAGING KNOWLEDGE AND TECHNOLOGIES TO NEW MARKET APPLICATIONS

Oxford University Press Every company can point to a growth strategy. Few, however, systematically implement it; instead, they tweak current products with incremental innovations, or attempt to buy growth through acquisitions. Neither is a satisfactory solution. Internally generated growth accomplished through product line renewal and new service development is essential to the long-term vitality of business across industries. The Fast Path to Corporate Growth takes on the challenge large corporations have in developing new product lines that address new market applications and provide new streams of revenue. The book integrates the key disciplines--new product strategy, user research, concept development and prototyping, market testing, and business modeling--into a practical framework for generating enterprise growth. The book illustrates that framework with in-depth examples of companies--including IBM, Honda, and Mars--that have generated impressive results by leveraging their core technologies to new markets and to new uses. Many of these examples contain templates that readers can use in their own projects. The book also addresses the human side of new market applications, providing advice on what executives and innovation team leaders must do to execute the steps of Meyer's framework for developing new market applications. This comprehensive guide to growth will appeal to R&D practitioners, new business development strategists, product managers, and to students in engineering management, innovation management, and corporate strategy.

The book is based on the latest version of Kotlin. The book provides you with a thorough understanding of programming concepts, object-oriented programming techniques, and design patterns. It includes numerous examples, explanation of concepts and keynotes. Where possible, examples and programming exercises are included. The main purpose of the book is to provide a comprehensive coverage of Kotlin features such as classes, data classes, and inheritance. It also provides a good understanding of design pattern and how Kotlin syntax works with object-oriented techniques. You will also gain familiarity with syntax in this book by writing labeled for loop and when as an expression. An introduction to the advanced concepts such as sealed classes and package level functions and coroutines is provided and we will also learn how these concepts can make the software development easy. Supported libraries for serialization, regular expression and testing are also covered in this book. By the end of the book, you would have learnt building robust and maintainable software with object oriented design patterns in Kotlin. DESIGN LIVE LOADS FOR PARKING GARAGES

ASCE Publications Report to the Structural Engineering Institute of ASCE. This report provides a better understanding of parking garage live loads and recommends an appropriate value for design. Based on a load survey conducted in nine parking garages in Chicago and Champaign-Urbana, Illinois, and Cambridge and Boston, Massachusetts, statistical analyses were carried out of the equivalent uniform distributed loads. These produce the maximum column axial loads and beam midspan moments that the building is expecting to experience during its lifetime. The dynamic amplifications resulting from vehicle motions on the decks and ramps were also investigated, and results suggest a possible reduction of the design live load from the current value of 50 psf, as stipulated in the ASCE-7 and Uniform Building Code, to 40 psf, but with no allowance for reduction according to bay area.
