#### GUIDE TO SOLVING ENVIRONMENTAL AND ENERGY CONSUMPTION PROBLEMS

---

HVAC troubleshooting guide to help facilities managers and maintenance personnel solve indoor environment and energy or water consumption problems. It is a step-by-step guide to identifying indoor environmental quality problems that may be caused by the operation of the HVAC system. It allows managers in charge of HVAC facilities, particularly those without a technical background, to initiate investigations, follow their progress and perhaps perform a few simple checks. Also supplies a series of 14 troubleshooting procedures for use by maintenance personnel actually performing the investigations. The IEQ problems covered by the procedures include: too hot, too cold, stuffy or still air, draughts, odours, noise from the HVAC system, dry eyes, throat or skin, lethargy, and headaches. The troubleshooting procedures can be purchased separately as a set of 14 sheets.

#### GAS HEATING

---

#### FURNACES, BOILERS, CONTROLS, COMPONENTS

---

ESCO Press Depending on what part of the country that you reside in, gas-burning heating systems can be either an absolute necessity or a rarity. For those that maintain, service and install gas heating systems or those just looking for a more in-depth source of accurate information, this modular training program focuses on furnaces and boilers that burn natural gas or LP. The combustion of gas to generate heat can be dangerous and should be thoroughly understood by HVAC technicians. This program covers many facets of gas heating including: combustion, system components and controls, heating sequences, installation, and troubleshooting. Through advancements in technology, modern heating systems have become far more efficient than their predecessors. Integrated circuit boards and electronic ignition systems have replaced the mechanical controls and manually lit pilots of older systems. Today, technicians may encounter furnaces or boilers that are older than they are, complex high-efficient systems, or anything in between. It is critical that they have a working knowledge of all these systems. This manual provides students and practicing technicians with the information and knowledge necessary to safely work on systems that incorporate gas combustion to provide heat. The information to service, maintain, and install these systems is also presented in an easy-to-understand format. The manual is full of color images and diagrams and includes end-of-chapter worksheets. Gas Heating was written to be a primary text that focuses specifically on gas-burning heating systems which can be used as a stand-alone text or a supplement to your current text book.

**RESIDENTIAL DUCT SYSTEMS - MANUAL D**

---

---

**THIRD EDITION, VERSION 2. 50**

---

---

*DeBolsillo The Third Edition of ANSI/ACCA Manual D is the Air Conditioning Contractors of America procedure for sizing residential duct systems. This procedure uses Manual J (ANSI/ACCA, Eighth Edition) heating and cooling loads to determine space air delivery requirements. This procedure matches duct system resistance (pressure drop) to blower performance (as defined by manufacturer's blower performance tables). This assures that appropriate airflow is delivered to all rooms and spaces; and that system airflow is compatible with the operating range of primary equipment. The capabilities and sensitivities of this procedure are compatible with single-zone systems, and multi-zone (air zoned) systems. The primary equipment can have a multi-speed blower (PSC motor), or a variable-speed blower (ECM or constant torque motor, or a true variable speed motor). Edition Three, Version 2.50 of Manual D (D3) specifically identifies normative requirements, and specifically identifies related informative material.*
