THE INCIDENT COMMAND SYSTEM

PROCESS, ORGANIZATION, LANGUAGE, AND FORMS FOR OIL SPILL RESPONSE MANAGEMENT

"In the 1970s, the Incident Command System (ICS) was formed to provide a consistent organization to respond to various emergency situations. Within the U.S. oil spill response community, ICS has become the standard emergency response management system and has been adopted by the U.S. Coast Guard. Positions within ICS are fixed and have specific functions, ensuring that all responders to a spill, regardless of agency, know what to do and where they belong in the structure. This manual is meant to be a quick-reference guide from which the reader can easily determine the specific responsibilities of a position within the ICS structure...The primary focus of this manual is to specify the product and task for which each position is responsible. The general position responsibilities are stated, but attention is focused on which ICS procedure, form, or other product needs to be produced, when, for whom, etc."--Guide to this manual (page 6).

SEVERE ASTHMA

European Respiratory Society Severe asthma is a form of asthma that responds poorly to currently available medication, and its patients represent those with greatest unmet needs. In the last 10 years, substantial progress has been made in terms of understanding some of the mechanisms that drive severe asthma; there have also been concomitant advances in the recognition of specific molecular phenotypes. This ERS Monograph covers all aspects of severe asthma - epidemiology, diagnosis, mechanisms, treatment and management - but has a particular focus on recent understanding of mechanistic heterogeneity based on an analytic approach using various 'omics platforms applied to clinically well-defined asthma cohorts. How these advances have led to improved management targets is also emphasised. This book brings together the clinical and scientific expertise of those from around the world who are collaborating to solve the problem of severe asthma.
