INFORMATION SOCIETY DEVELOPMENT THROUGH ICT MARKET STRATEGIES

ALBANIA VERSUS OTHER DEVELOPING COUNTRIES

Springer This book examines the relationship between information society and information communication technology (ICT) markets, while evaluating the ICT impact on Albanian society and its economy. It offers insights on the country's information society development and compares it to other nations. The book begins with a general introduction to information society and efforts that can be used for ICT strategy. It then takes a look at ICT as an industrial sector and uncovers the importance for a strong ICT infrastructure management. Using this background information, the book finally explores the growing information society and ICT sector found in Albania. It measures the information society being created, and compares it to other countries in South Eastern Europe. Next the authors introduce a theoretical model for ICT driven development, focusing on ICT innovation and investment as factors that can affect the ICT market. These factors have also taken into account for strategy development in the national and industry level.

COMPARATIVE ANALYSIS OF ICT IN EDUCATION BETWEEN CHINA AND CENTRAL AND EASTERN EUROPEAN COUNTRIES

Springer Nature This book presents the status quo of Information and Communication Technology (ICT) in Education, with a focus on China and the 17 Central and Eastern European Countries (CEECs), including Albania, Bosnia and Herzegovina, Bulgaria, Croatia, the Czech Republic, Estonia, Greece, Hungary, Latvia, Lithuania, Macedonia, Montenegro, Poland, Romania, Serbia, Slovakia and Slovenia (the "17+1" cooperation mechanism, as an incubator for pragmatic trans-regions cooperation platform, created by China and the 17 CEECs). With recent advances in ICT in China and the CEECs, it has assumed increasingly important roles in education, including the improvement of the quality of teaching and learning, as well as the promotion of equity in education. The significant contribution of ICT in education is an enabler to achieving the goals of the "17+1 cooperation" mechanism between China and the CEECs, which has attracted considerable attention worldwide, given fresh impetus to cooperation between the two parties, and opened a new chapter in China-CEEC cooperation. The contributors, all of whom hail from these 18 countries, describe the state-of-the-art of ICT in education in their respective country, and focus on three major aspects, namely: the country profile, general status of education development, and ICT in education. In turn, leading experts in educational informatization research compare the situations in different countries. Taken together, the papers offer valuable insights for policymakers and educators on how to integrate ICT into educational processes, and on inter-regional cooperation with regard to ICT in education.

HANDBOOK OF RESEARCH ON VALUE CREATION FOR SMALL AND MICRO SOCIAL ENTERPRISES

IGI Global In the corporate world, businesses are focused on increasing their revenues but ignore the cries of social and environmental concerns from nearby communities. At the other end of the spectrum, nonprofits seek to help their local communities but are constantly required to create fundraisers without having adequate time to put those collected donations to use. The world needs an industry to combine civic engagement and public service with wealth and value creation to provide self-sustaining opportunities for public services that are sometimes overlooked or ignored. The Handbook of Research on Value Creation for Small and Micro Social Enterprises defines the concept of social enterprise and provides vital insight into the importance of rebalancing, creating, and promoting economic activities that achieve social fairness, cultural fulfillment, and the protection of the environment. While highlighting topics such as marketing strategies, cross-cultural frameworks, and public policy, this publication focuses on empowering rather than controlling sustainable solutions for various communities and consumers. This book is ideally designed for researchers, policymakers, academicians who teach and/or research small and micro social enterprises, and advanced-level students furthering their research exposure to pertinent topics in this field.

GLOBAL STRATEGY AND PRACTICE OF E-GOVERNANCE: EXAMPLES FROM AROUND THE WORLD

EXAMPLES FROM AROUND THE WORLD

IGI Global Over the past decade, there has been continual development and renewal of strategies and practices surrounding e-governance. Governments around the world have embraced new information and communication technologies to increase the efficiency of internal processes, deliver better and more integrated services to citizens and businesses, invite citizen and stakeholder participation in planning decisions, improve communication, and sometimes even enhance democratic processes. Global Strategy and Practice of E-Governance: Examples from Around the World provides readers with an overview of relevant strategy and policy-level theoretical frameworks and examples, as well as up-to-date implementations from around the world. This book offers valuable insights into best practices, as well as some of the issues and challenges surrounding the governance of and with information and communication technologies in a globalized, knowledge-based world.

THE RISE OF AUTONOMOUS SMART CITIES

TECHNOLOGY, ECONOMIC PERFORMANCE AND CLIMATE RESILIENCE

Springer Nature This book introduces the concept of the 'autonomous city'- a concept that has been developed from the 'smart cities' model that is based on a city's ability to gather data and taking it one step further. The digital revolution has brought about numerous changes in the urban realm, along with the understanding that technology can aid in increasing the performance and efficiency of urban areas. This technology has given rise to a wealth of data allowing urban leaders to respond better to crisis and craft policies that increase the liveability of urban areas. The 'autonomous city' explores the possibility of urban areas evolving from the dimension of data gathering to that of action response – so a city able to collect data and render real time decisions to self-manage a variety of functions based on its interpretation of that data. The book discusses how this could lead to the automation of select urban dimensions for increased efficiency and performance, but also details how such a process would require careful consideration when put into practice. This book will be a valuable resource for scholars and students across Urban Planning, Sustainability and STS, as well as practitioners and policy makers involved in the development of urban life.

STRATEGIC INFORMATION SYSTEMS AND TECHNOLOGIES IN MODERN ORGANIZATIONS

IGI Global The role of technology in business environments has become increasingly pivotal in recent years. These innovations allow for improved process management, productivity, and competitive advantage. Strategic Information Systems and Technologies in Modern Organizations is an authoritative reference source for the latest academic research on the implementation of various technological tools for increased organizational productivity and management. Highlighting relevant case studies, empirical analyses, and critical business strategies, this book is ideally designed for professionals, researchers, academics, upper-level students, and managers interested in recent developments of technology in business settings.

HANDBOOK ON ICT IN DEVELOPING COUNTRIES

5G PERSPECTIVE

CRC Press The mobile communications market in developing countries is growing at a rapid rate. This is evident in the rapid spread of mobile broadband cellular networks such as 3G. 4G is also being deployed in developing countries around the world. As the global communications market proceeds towards 5G, it is evident that developing countries will not be left behind. However, there are challenges and barriers on the road ahead specific to developing countries. To aid policy makers, researchers and members of the academia make informed decision that will help the advancement of 5G, this handbook provides an insight into the impact of existing mobile cellular networks in some developing countries. Topics discussed in this handbook include:Digital dividePolicy outlook5G and rural areas5G readinessTelco Business modelsTelecom tower pricingMobile application adoption

TRANSFORMING GOVERNMENT AND BUILDING THE INFORMATION SOCIETY

CHALLENGES AND OPPORTUNITIES FOR THE DEVELOPING WORLD

Springer Science & Business Media Information and communication technology (ICT) is central to reforming governance, innovating public services, and building inclusive information societies. Countries are learning to weave ICT into their strategies for transforming government as enterprises have learned to use ICT to innovate and transform their processes and competitive strategies. ICT-enabled transformation offers a new path to digital-era government that is responsive to the challenges of our time. It facilitates innovation, partnering, knowledge sharing, community organizing, local monitoring, accelerated learning, and participatory development. In Transforming Government and Building the Information Society, Nagy Hanna draws on multi-disciplinary research on ICT in the public sector, and on his rich experience of over 35 years at the World Bank and other aid agencies, to identify the key ingredients for the strategic integration of ICT into governance and poverty reduction strategies. The author showcases promising practices from around the world to outline the strategic options involved in using ICT to maximize developmental impact—transforming government institutions and public services, and empowering communities for inclusion and grassroots innovation. Despite the ICT promise, Hanna acknowledges that reforming governance and empowering poor communities are difficult long-term undertakings. Hanna moves beyond the imperatives and visions of e-transformation to strategic design and implementation options, and draws practical lessons for policymakers, reformers, innovators, community leaders, ICT specialists and development experts.

ENCYCLOPEDIA OF INFORMATION SCIENCE AND TECHNOLOGY, THIRD EDITION

IGI Global "This 10-volume compilation of authoritative, research-based articles contributed by thousands of researchers and experts from all over the world emphasized modern issues and the presentation of potential opportunities, prospective solutions, and future directions in the field of information science and technology"--Provided by publisher.

INFORMATION AND TECHNOLOGY LITERACY: CONCEPTS, METHODOLOGIES, TOOLS, AND APPLICATIONS

CONCEPTS, METHODOLOGIES, TOOLS, AND APPLICATIONS

IGI Global People currently live in a digital age in which technology is now a ubiquitous part of society. It has become imperative to develop and maintain a comprehensive understanding of emerging innovations and technologies. Information and Technology Literacy: Concepts, Methodologies, Tools, and Applications is an authoritative reference source for the latest scholarly research on techniques, trends, and opportunities within the areas of digital literacy. Highlighting a wide range of topics and concepts such as social media, professional development, and educational applications, this multi-volume book is ideally designed for academics, technology developers, researchers, students, practitioners, and professionals interested in the importance of understanding technological innovations.

GROWING INFORMATION: PART I

Informing Science

E-TRANSFORMATION: ENABLING NEW DEVELOPMENT STRATEGIES

Springer Science & Business Media Could information and communication technology (ICT) become the transformative tool for a new style of global development? Could ICT promote knowledge-based, innovation-driven, and smart, adaptive, participatory development? As countries seek a way out of the present period of economic contraction, they are trying to weave ICT into their development strategies, in the same way organizations have learned to use ICT to transform their business models and strategies. This integration offers a new path to development that is responsive to the challenges of our times. In e-Transformation, Nagy Hanna identifies the key ingredients for the strategic integration of ICT into national development, with examples from around the world. He draws on his rich experience of over 35 years at the World Bank and other aid agencies to outline the strategic options involved in using ICT to maximize developmental impact—transforming public service institutions, networking businesses for innovation and competitiveness, and empowering communities for social inclusion and poverty reduction. He identifies the key interdependencies in e-transformation and offers a holistic framework to tap network effects and synergies across all elements of the process, including leadership, cyber policies, institutions, human resources, technological competencies, information infrastructure, and ICT uses for government, business, and society. Integrating analytical insights and practical applications across the fields of development, political economy, public administration, entrepreneurship, and technology management, the author candidly argues that e-transformation, like all bold ideas, faces implementation challenges. In particular, the aspiration-reality gap needs to be systematically addressed if ICT-enabled innovation and transformation is to become a development practice. E-transformation is first and foremost about thinking strategically and creatively about the options made possible by the information technology revolution in the context of globalization. To this end, the author provides tools and best practices designed to nurture innovation, select entry points, prioritize among competing demands, and sequence and scale up. He outlines the roles of all participants—political, managerial, entrepreneurial, social and technical—whose leadership is essential for successful innovation.

NATIONAL STRATEGIES TO HARNESS INFORMATION TECHNOLOGY

SEEKING TRANSFORMATION IN SINGAPORE, FINLAND, THE PHILIPPINES, AND SOUTH AFRICA

Springer Science & Business Media The ability to harness Information Communication Technologies (ICTs) is increasingly at the heart of competitiveness and sustainable growth. As countries engage in an increasingly competitive global economy, they are trying to weave ICT into their development strategies, in the same way enterprises have learned to use ICT to transform their business models and strategies. This integration offers a new path to development that is responsive to the challenges of our times. In National Strategies to Harness Information Technology, Nagy Hanna and Peter Knight provide a framework for assessing the opportunities, challenges, and prospects for "e-transformation" and for analyzing the options and innovations adopted to manage the e-transformation process. They ask hard questions: what does it take to harness ICT to transform an economy? Why some countries accelerate their development journey with ICT while others fail? How did successful countries balance the need for strategic leadership with bottom up innovation? Can countries reduce the risks of digital divide? What have been the roles of government and private sectors? What lessons can be learned for countries at different levels of development? Featuring contributions from country experts, the editors and authors provide in-depth case studies of ICT deployment in Singapore, Finland, the Philippines, and South Africa, and asses the progress of such efforts. The result is an essential resource for academic researchers, policy analysts, policymakers, and industry leaders interested in the role of ICT in national development, innovation, and economic growth. LATIN AMERICAN ECONOMIC OUTLOOK 2020 DIGITAL TRANSFORMATION FOR BUILDING BACK BETTER

DIGITAL TRANSFORMATION FOR BUILDING BACK BETTER

OECD Publishing The Latin American Economic Outlook (LEO) 2020 focuses on the role of digital transformation in helping to navigate through challenging times. The Covid-19 pandemic is having a profound impact on socio-economic conditions, accentuating the already complex scenario faced by a region with significant structural weaknesses. This unprecedented crisis comes at a time of high aspirations and reinforces the need to transform the very foundations of the development model in the region.

This book identifies areas on which Spain should continue work: convergence with EU/OECD levels of access and use, development of e-government services, and growth of the ICT sector.

SHAPING THE FUTURE OF ICT

TRENDS IN INFORMATION TECHNOLOGY, COMMUNICATIONS ENGINEERING, AND MANAGEMENT

CRC Press The International Conference on Communications, Management, and Information Technology (ICCMIT'16) provides a discussion forum for scientists, engineers, educators and students about the latest discoveries and realizations in the foundations, theory, models and applications of systems inspired on nature, using computational intelligence methodologies, as well as in emerging areas related to the three tracks of the conference: Communication Engineering, Knowledge, and Information Technology. The best 25 papers to be included in the book will be carefully reviewed and selected from numerous submissions, then revised and expanded to provide deeper insight into trends shaping future ICT.

E-DEVELOPMENT

FROM EXCITEMENT TO EFFECTIVENESS

World Bank Publications Information and communication technologies (ICTs) are increasingly being recognized as essential tools of development--tools that can empower poor people, enhance skills, increase productivity and improve governance at all levels. The success of ICT-enabled development (or e-development) will thus not be measured by the diffusion of technology, but by advances in development itself: economic growth and, ultimately, achievement of the Millenium Development Goals. This volume examines a wide range of issues related to e-development, with a focus on the requirements and realities of using ICTs to advance development goals. The report does not attempt to present a comprehensive overview of e-development. Rather, it highlights key issues that have immediate relevance to policy makers in developing nations who make decisions on investments and development goals. It highlights two issues in particular, e-government and e-education, because ICT applications in these areas can lead to significant development outcomes and can also be successfully deployed through public-private partnerships, leveraging limited government funding to achieve greater impact.

ADVANCED METHODOLOGIES AND TECHNOLOGIES IN GOVERNMENT AND SOCIETY

IGI Global Governments must continuously update policies, laws, and legislation as the world continues to rapidly evolve due to technologies and changing cultural perspectives. To streamline policy creation and implementation, governments seek new and efficient methods to ensure their citizens' and communities' safety while also encouraging citizen participation. Advanced Methodologies and Technologies in Government and Society provides research on emerging methodologies in effective governing including sections on

public sector management and socioeconomic development. While highlighting the challenges facing government officials and law enforcement such as crisis response and natural disaster management, this book shows how technology use can make those areas of government more efficient and improve preventative measures. This book is an ideal resource for law enforcement, government officials and agencies, policymakers, public servants, citizen activists, researchers, and political leaders seeking cutting-edge information to strengthen their government's relationship with society and their constituents while also strengthening their policy measures through new technology and methods.

2006 INFORMATION AND COMMUNICATIONS FOR DEVELOPMENT

GLOBAL TRENDS AND POLICIES

World Bank Publications """The report is essential reading for policy makers, government workers, and academics pursuing the goal of equitable, sustainable development across the world."" - N. R. Narayana Murthy, Chairman and Chief Mentor Infosys Technologies Ltd. Information and communication technology (ICT) is rapidly evolving, changing rich and poor societies alike. It has become a powerful tool for participating in the global economy and for offering new opportunities for development efforts. ICT can and should advance economic growth and reduce poverty in developing countries. It has been 20 years since the first telephone operator was privatized, a little over 10 since the World Wide Web emerged, and 5 since the telecommunications bubble burst. How have the ICT sector and its role in development evolved? What have we learned? How can we move forward? Information and Communications for Development 2006: Global Trends and Policies contains lessons from both developed and developing countries. It examines the roles of the public and private sectors, identifying the challenges and the benefits of adopting and expanding ICT use. The report assesses topics essential to building an information society, including investment, access, diffusion, and country policies and strategies. Assessing what has worked, what hasn't, and why, this report is an invaluable guide for understanding how to capture the benefits of ICT around the world."
