Your Movie Sucks

Andrews McMeel Publishing **Roger Ebert's I Hated Hated Hated This Movie, which gathered some of his most scathing reviews, was a best-seller. This new collection continues the tradition, reviewing not only movies that were at the bottom of the barrel, but also movies that he found underneath the barrel. From Roger's review of Deuce Bigalow: European Gigolo (0 stars):**

"The movie created a spot of controversy in February 2005. According to a story by Larry Carroll of MTV News, Rob Schneider took offense when Patrick Goldstein of the Los Angeles Times listed this year's Best Picture nominees and wrote that they were 'ignored, unloved, and turned down flat by most of the same studios that . . . bankroll hundreds of sequels, including a follow-up to Deuce Bigalow: Male Gigolo, a film that was sadly overlooked at Oscar time because apparently nobody had the foresight to invent a category for Best Running Penis Joke Delivered by a Third-Rate Comic.' Schneider retaliated by attacking Goldstein in full-page ads in Daily Variety and the Hollywood Reporter. In an open letter to Goldstein, Schneider wrote: 'Well, Mr. Goldstein, I decided to do some research to find out what awards you have won. I went online and found that you have won nothing. Absolutely nothing. No journalistic awards of any kind. . . . Maybe you didn't win a Pulitzer Prize because they haven't invented a category for Best Third-Rate, Unfunny Pompous Reporter Who's Never Been Acknowledged by His Peers. . . .' Schneider was nominated for a 2000 Razzie Award for Worst Supporting Actor, but lost to Jar-Jar Binks. But Schneider is correct, and Patrick Goldstein has not yet won a Pulitzer Prize. Therefore, Goldstein is not qualified to complain that Columbia financed Deuce Bigalow: European Gigolo while passing on the opportunity to participate in Million Dollar Baby, Ray, The Aviator, Sideways, and Finding Neverland. As chance would have it, I have won the Pulitzer Prize, and so I am qualified. Speaking in my official capacity as a Pulitzer Prize winner, Mr. Schneider, your movie sucks."

Unix in a Nutshell

A Desktop Quick Reference - Covers GNU/Linux, Mac OS X, and Solaris

"O'Reilly Media, Inc." As an open operating system, Unix can be improved on by anyone and everyone: individuals, companies, universities, and more. As a result, the very nature of Unix has been altered over the years by numerous extensions formulated in an assortment of versions. Today, Unix encompasses everything from Sun's Solaris to Apple's Mac OS X and more varieties of Linux than you can easily name. The latest edition of this bestselling reference brings Unix into the 21st century. It's been reworked to keep current with the broader state of Unix in today's world and highlight the strengths of this operating system in all its various flavors. Detailing all Unix commands and options, the informative guide provides generous descriptions and examples that put those commands in context. Here are some of the new features you'll find in Unix in a Nutshell, Fourth Edition: Solaris 10, the latest version of the SVR4-based operating system, GNU/Linux, and Mac OS X Bash shell (along with the 1988 and 1993

versions of ksh) tsch shell (instead of the original Berkeley csh) Package management programs, used for program installation on popular GNU/Linux systems, Solaris and Mac OS X GNU Emacs Version 21 Introduction to source code management systems Concurrent versions system Subversion version control system GDB debugger As Unix has progressed, certain commands that were once critical have fallen into disuse. To that end, the book has also dropped material that is no longer relevant, keeping it taut and current. If you're a Unix user or programmer, you'll recognize the value of this complete, up-to-date Unix reference. With chapter overviews, specific examples, and detailed command.

Feature Extraction and Image Processing for Computer Vision

[Academic Press](#) **Feature Extraction for Image Processing and Computer Vision is an essential guide to the implementation of image processing and computer vision techniques, with tutorial introductions and sample code in MATLAB and Python. Algorithms are presented and fully explained to enable complete understanding of the methods and techniques demonstrated. As one reviewer noted, "The main strength of the proposed book is the link between theory and exemplar code of the algorithms." Essential background theory is carefully explained. This text gives students and researchers in image processing and computer vision a complete introduction to classic and state-of-the art methods in feature extraction together with practical guidance on their implementation. The only text to concentrate on feature extraction with working implementation and worked through mathematical derivations and algorithmic methods A thorough overview of available feature extraction methods including essential background theory, shape methods, texture and deep learning Up to date coverage of interest point detection, feature extraction and description and image representation (including frequency domain and colour) Good balance between providing a mathematical background and practical implementation Detailed and explanatory of algorithms in MATLAB and Python**

Brownian Motion, Martingales, and Stochastic Calculus

[Springer](#) **This book offers a rigorous and self-contained presentation of stochastic integration and stochastic calculus within the general framework of continuous semimartingales. The main tools of stochastic calculus, including Itô's formula, the optional stopping theorem and Girsanov's theorem, are treated in detail alongside many illustrative**

examples. The book also contains an introduction to Markov processes, with applications to solutions of stochastic differential equations and to connections between Brownian motion and partial differential equations. The theory of local times of semimartingales is discussed in the last chapter. Since its invention by Itô, stochastic calculus has proven to be one of the most important techniques of modern probability theory, and has been used in the most recent theoretical advances as well as in applications to other fields such as mathematical finance. **Brownian Motion, Martingales, and Stochastic Calculus** provides a strong theoretical background to the reader interested in such developments. Beginning graduate or advanced undergraduate students will benefit from this detailed approach to an essential area of probability theory. The emphasis is on concise and efficient presentation, without any concession to mathematical rigor. The material has been taught by the author for several years in graduate courses at two of the most prestigious French universities. The fact that proofs are given with full details makes the book particularly suitable for self-study. The numerous exercises help the reader to get acquainted with the tools of stochastic calculus.

Antistatic Sprays

Independently Published Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination

potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center

Immoral Traffic - Prostitution in India

eBooks2go, Inc. V. Sithannan, author of the title "Immoral Traffic - Prostitution in India", has marked it to the guardians of Law and Morals in India and the world. Standing firmly on the challenging locale of Indian Law and Legal System and drawing substance from his rich and varied experience as a Law Enforcement Officer of the Police Department of Tamil Nadu. Sithannan, in writing this monumental treatise, has fulfilled the longtime need of the Judicial Officers, Law Enforcement Authorities, Social Activists, NGOs, Gender Activists and the general public. In writing this volume, the academic quest of Sithannan has made him to cull out diverse facts and figures from various enactments, official documents and literature relating to Immoral Traffic and Prostitution. Further in this scholarly work, the author does not stop with expressing his sentiments of compassion for the Victims of Prostitution but he is concerned also with

their rescue, rehabilitation and their decent placement in society, on a par with others. However, the agents, the brothel-runners and the traffickers in the trade of Prostitution come under his scathing attack and reprehensible condemnation, for these wolves, the world over, have made this ignoble profession into an industry, the third major lucrative global industry, next only to arms-smuggling and trade in narcotics. The Book contains 17 Chapters plus 3 Appendices. In these divisions, the author, talks about the types, causes and impact of prostitution, which result in various forms of harmful diseases. Further, a comparative picture of the legal status of Immoral Traffic in other countries is also given. Also, the author describes various instruments of Law, available for safeguarding the child victims of Trafficking and Prostitution. The Chapters on the Powers of the Police Officers and the Checklist(128) for Investigating Officers are path-breaking indeed! Judgment of cases on Immoral Trafficking and Prostitution, recorded in the Book, along with a list of the Powers of the Court, the Central and the State Governments would be a major source of reference material for the officials of Law and Governments. Apart from this, the 39 points on further role of NGO's and People's Organisations and other Social Activists in the field and would be of immense value, when they go for field work. The author has concluded the Book with suggestions and recommendations for arresting the menace of trafficking in persons and in this respect, he has made as many as 59 very valuable suggestions, besides giving 31 valid proposals and recommendations for effectively preventing child trafficking for purposes of prostitution and for engaging the child in worst forms of child labour. The Appendices have listed in a detailed way the Immoral Traffic (Prevention) Act, 1956, in detail in three aspects. This Title is a scholarly one appearing at the most appropriate time, when the scourge of HIV/AIDS is catching up in a developing country like India, as wild fire, capable of halting its economic progress. The author has rightly written in his Preface that when a Law Enforcement Officer reads this Book, he would ensure conviction for the offenders; when an Advocate goes through the Title, he will see to the acquittal of his clients; and when a Judicial Officer reads this Book and pronounces judgments on cases like these, he is sure to pronounce judgments marked by social concern and compassion for the victims-women and children. No wonder that this book is a must for all the advocates, social activists, gender rights workers, NGOs and researchers on Gender Studies and other guardians of Law and Morals.

Brownian Motion and Stochastic Calculus

Springer A graduate-course text, written for readers familiar with measure-theoretic probability and discrete-time processes, wishing to explore stochastic processes in continuous time. The vehicle chosen for this exposition is Brownian motion, which is presented as the canonical example of both a martingale and a Markov process with continuous paths. In this context, the theory of stochastic integration and stochastic calculus is developed, illustrated by results concerning representations of martingales and change of measure on Wiener space, which in turn permit a presentation of recent advances in financial economics. The book contains a detailed discussion of weak and strong solutions of stochastic differential equations and a study of local time for semimartingales, with special emphasis on the theory of Brownian local time. The whole is backed by a large number of problems and exercises.

Continuous Martingales and Brownian Motion

Springer Science & Business Media "This is a magnificent book! Its purpose is to describe in considerable detail a variety of techniques used by probabilists in the investigation of problems concerning Brownian motion....This is THE book for a capable graduate student starting out on research in probability: the effect of working through it is as if the authors are sitting beside one, enthusiastically explaining the theory, presenting further developments as exercises." -BULLETIN OF THE L.M.S.

Grandad Mandela

Lincoln Children's Books "...profoundly moving..." -Publishers Weekly Nelson Mandela's two great-grandchildren ask their grandmother, Mandela's youngest daughter, 15 questions about their grandad - the global icon of peace and forgiveness who spent 27 years in prison.
