## Race Tech's Motorcycle Suspension Bible

**Motorbooks** *Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks*

for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

# Depression in Parents, Parenting, and Children Opportunities to Improve Identification, Treatment, and Prevention

**National Academies Press** *Depression is a widespread condition affecting approximately 7.5 million parents in the U.S. each year and may be putting at least 15 million children at risk for adverse health outcomes. Based on evidentiary studies, major depression in either parent can interfere with parenting quality and increase the risk of children developing mental, behavioral and social problems. Depression in Parents, Parenting, and Children highlights disparities in the prevalence, identification, treatment, and prevention of parental depression among different sociodemographic populations. It also outlines strategies for effective intervention and identifies the need for a more interdisciplinary approach that takes biological, psychological, behavioral, interpersonal, and social contexts into consideration. A major challenge to the effective management of parental depression is developing a treatment and prevention strategy that can be introduced within a two-generation framework, conducive for parents and their children. Thus far, both the federal and state response to the problem has been fragmented, poorly funded, and lacking proper oversight. This study examines options for widespread implementation of best practices as well as strategies that can be effective in diverse service settings for diverse populations of children and their families. The delivery of adequate screening and successful detection and treatment of a depressive illness and prevention of its effects on parenting and the health of children is a formidable challenge to modern health care systems. This study offers seven solid recommendations designed to increase awareness about and remove barriers to care for both the depressed adult and prevention of effects in the child. The report will be of particular interest to federal health officers, mental and behavioral health providers in diverse parts of health care delivery systems, health policy staff, state legislators, and the general public.*

## Printed Circuit Board Design Techniques for EMC

# Compliance

## A Handbook for Designers

**Wiley-IEEE Press** *"Electromagnetic compatibility (EMC) is an engineering discipline often identified as "black magic." This belief exists because the fundamental mechanisms on how radio frequency (RF) energy is developed within a printed circuit board (PCB) is not well understood by practicing engineers. Rigorous mathematical analysis is not required to design a PCB. Using basic EMC theory and converting complex concepts into simple analogies helps engineers understand the mitigation process that deters EMC events from occurring. This user-friendly reference covers a broad spectrum of information never before published, and is as fluid and comprehensive as the first edition. The simplified approach to PCB design and layout is based on real-life experience, training, and knowledge. Printed Circuit Board Techniques for EMC Compliance, Second Edition will help prevent the emission or reception of unwanted RF energy generated by components and interconnects, thus achieving acceptable levels of EMC for electrical equipment. It prepares one for complying with stringent domestic and international regulatory requirements. Also, it teaches how to solve complex problems with a minimal amount of theory and math. Essential topics discussed include: \* Introduction to EMC \* Interconnects and I/O \* PCB basics \* Electrostatic discharge protection \* Bypassing and decoupling \* Backplanes-Ribbon Cables-Daughter Cards \* Clock Circuits-Trace Routing-Terminations \* Miscellaneous design techniques This rules-driven book-formatted for quick access and cross-reference-is ideal for electrical and EMC engineers, consultants, technicians, and PCB designers regardless of experience or educational background."* Sponsored by: IEEE Electromagnetic Compatibility Society

## Light-Emitting Diodes

**Cambridge University Press** *Revised and fully updated, the second edition of this graduate textbook offers a comprehensive explanation of the technology and physics of LEDs such as infrared, visible-spectrum, ultraviolet, and white LEDs made from III-V semiconductors. Elementary properties such as electrical and optical characteristics are reviewed, followed by the analysis of advanced device structures. With nine additional chapters, the treatment of LEDs has been vastly expanded, including new material on device packaging, reflectors, UV LEDs, III-V nitride materials, solid-state sources for illumination applications, and junction temperature. Radiative and non-radiative recombination dynamics, methods for improving light extraction, high-efficiency and high-*

power device designs, white-light emitters with wavelength-converting phosphor materials, optical reflectors, and spontaneous recombination in resonant-cavity structures are discussed in detail. With exercises, solutions, and illustrative examples, this textbook will be of interest to scientists and engineers working on LEDs and graduate students in electrical engineering, applied physics, and materials science.

## Handbook of Thermoluminescence

**World Scientific** This second edition of the Handbook of Thermoluminescence enlarges on all the subjects which were treated in the first edition and adds further arguments, including the theory of thermoluminescent dose measurement, several examples concerning the kinetics parameters determination using various methods such as peak shape, isothermal decay, and so on. A special section is devoted to food irradiation, an important subject at the present time, and to the thermoluminescent characterization of the minerals extracted from the irradiated food. Another new section is devoted to the thermoluminescent phosphors and their main characteristics. The analytical treatments of the various thermoluminescent models are fully developed. As in the first edition, the arguments are given in alphabetical order to ease research. This second edition therefore aims to provide real practical support for researchers, students and personnel involved in radiation protection services, as well as in medical applications.

## The First 1000 Days in the Nordic Countries: Psychosocial Interventions and Psychological Tests: A Review of the Evidence

**Nordic Council of Ministers** Available online: <https://pub.norden.org/nord2021-037/> The report provides an overview and short systematic review of the psychosocial interventions and psychological tests used in the Nordic countries during the first 1000 days of a child's life, i.e. from the prenatal period until two years of age. A total of 63 interventions and 33 tests were reviewed. Findings reveal that, although a large number of interventions and tests are available for the target groups in the Nordic countries, evidence regarding their effectiveness or psychometric properties is often lacking or insufficient. Thus, it is important that research efforts be enhanced in the Nordic region to strengthen the evidence-base of the interventions and instruments that practitioners rely upon in order to assess and support mental wellbeing for Nordic children and families during this critical period in their lives.

## The First 1000 Days in the Nordic Countries: A Situation Analysis

**Nordic Council of Ministers** Available online: <https://pub.norden.org/nord2020-051/> The First 1000 Days in the Nordic Countries is a Nordic collaborative project, launched as part of the 2019 Icelandic Presidency of the Nordic Council of Ministers, with the aim to support healthy emotional development and good mental health during the first 1000 days of life (from conception to the age of two). The first phase involved a situation analysis in which extensive data was gathered from across the Nordic countries about practices to support wellbeing and identify early risk factors in prenatal care, infant and child healthcare and early childhood education and care. The results are presented in this report with detailed country profiles and a comparison across countries. Significant strengths and challenges are identified when it comes to supporting young children's wellbeing within the Nordic region and examples of good practice from each participating country are offered.
