Translator's Workbench Tools and Terminology for Translation and Text Processing Springer Science & Business Media The Translator's Workbench Project was a European Community sponsored research and development project which dealt with issues in multi-lingual communication and documentation. This book presents an integrated toolset as a solution to problems in translation and documentation. Professional translators and teachers of translation were involved in the process of software development, starting with a detailed study of the user requirements and ending with several evaluation-and-improvement cycles of the resulting toolset. English, German, Greek, and Spanish are addressed in the contributions, however, some of the techniques are inherently language-independent and can thus be extended to cover other languages as well. Translation can be viewed broadly as the execution of three cognitive processes, and this book has been structured along these lines:

- First, the translation pre-process, understanding the target language text at a lexico semantic level on the one hand, and making sense of the source language document on the other hand. The tools for the pre-translation process include access to electronic networks, conversion of documents from one format to another, creation of terminology data banks and access to existing data banks, and terminology dictionaries.
- Second, the translation process, rendering sentences in the source language into equivalent target sentences. The translation process refers to the potential of conventional machine translation systems, like METAL, and of the statistically oriented translation memory.

GABA and Sleep Molecular, Functional and Clinical Aspects Springer Science & Business Media GABA (gamma-aminobutyric acid) is the main neurotransmitter regulating sleep. The majority of drugs presently in use for the treatment of sleep disorders act by enhancing GABAergic neuronal inhibition. The GABA system is, therefore, of prime clinical relevance for the therapy of insomnia. The focus of this volume is on the neuropsychopharmacology and the clinical impact of the GABA system in regulating sleep and wakefulness. It presents molecular, neuropharmacological, systems-biological and clinical approaches to the understanding of the mechanism of action of GABA and GABAergic drugs. It also explores the role of GABA in the basic drives that affect sleep, and the influences that adapt sleep and wakefulness to external events.

Conflicts, Crimes and Regulations in Cyberspace John Wiley & Sons The study of cyberspace is relatively new within the field of social sciences, yet interest in the subject is significant. Conflicts, Crimes and Regulations in Cyberspace contributes to the scientific debate being brought to the fore by addressing international and methodological issues, through the use of case studies. This book presents cyberspace as a socio-technical system on an international level. It focuses on state and non-state actors, as well as the study of strategic concepts and norms. Unlike global studies, the socio-technical approach and "meso" scale facilitate the analysis of cyberspace in international relations. This is an area of both collaboration and conflict for which specific modes of regulation have appeared.

Maya Sculpture of Copán The Iconography University of Oklahoma Press Copán, one of the most important Classic Maya sites, is renowned for the artistry of its high-relief stelae and altars and for the wealth of detail on its freestanding and architectural sculpture. In *Maya Sculpture of Copán: The Iconography*, internationally known Mayanist Claude-François Baudez provides a masterful survey of these elaborate and intriguing carved images. In Part I, Baudez identifies and deciphers the specific motifs on each monument and shows how the elements were combined to produce meaningful iconographic messages. The architectural sculpture expresses the meaning and function of the buildings and complexes, many designed to represent the sky, earth, and underworld and to serve as stages for rituals. Photographs and drawings clarify the intricate forms. Part II relates the iconography to the religion and politics of the city-state. Baudez traces the evolution of the motifs in relation to the history of Copán and the multiple functions of the king—his cosmic role, the continuous reference to his ancestors, and the dynastic cycles. Sacrifice—bloodletting by the king and the sacrifice of captives—is of paramount importance. Growth and rebirth required constant offerings of blood to the earth and to the sun, to ensure its rebirth at dawn after its nocturnal journey through the underworld. The monuments give a coherent picture of Maya cosmology.

Handbook on Business to Business Marketing Edward Elgar Publishing This insightful Handbook provides a comprehensive state-of-the-art review of business-to-business marketing. It supplies an overview and pioneers new ideas relating to the activity of building mutually value-generating relationships between organizations—from businesses to government agencies to not-for-profit organizations—and the many individuals within them. Comprising 38 chapters written by internationally renowned scholars, this Handbook presents perspectives of a variety of issue areas from both an academic and a managerial perspective (state of theory and state of practice). The material in this compendium includes theoretical and practical perspectives in business-to-business marketing, marketing mix and strategy, interfirm relationships, personal selling and sales management, technology marketing, and methodological issues central to business-to-business markets. Published in conjunction with Penn State's Institute for the Study of Business Markets, this extensive volume will expand research and teaching in business-to-business marketing in academia and will improve the practice of business-to-business marketing for firms in the industry. This path-breaking Handbook is targeted primarily at marketing academics and graduate students who want a complete overview of the academic state of the business-to-business marketing domain. It will also prove an invaluable resource for forward-thinking business-to-business practitioners who want to be aware of the current state of knowledge in their domains.

Medium7 Evidence of the Afterlife and Predictions iUniverse In the book *Medium7*, Canadian researcher and author Donna Smith-Moncrieffe shares insight from her journey to find truth about the nature of existence. Smith-Moncrieffe provides engaging cases studies and uses rigorous scientific methods to determine the existence of an afterlife and the extent to which mediums can accurately predict the future. Through extensive interviews with ten gifted mediums and their clients, Smith-Moncrieffe reveals an in-depth look into how mediums interact with the spirit world and communicate with the deceased, how thoughts create reality, and how reincarnation impacts mankind's existence. She also inspires others to embark on their own personal journeys of discovery to learn more about the purpose of life and become more confident about the final destination. *Medium7* shares a range of ground-breaking studies involving mediums, near death experiences, and past life regression therapy to provide knowledge, courage, and hope for anyone interested in understanding more about the true nature of our universe and mankind's existence—now and for eternity.

Cutting Code Software and Sociality Peter Lang Software has often been marginalized in accounts of digital cultures and network societies. Although software is everywhere, it is hard to say what it actually is. *Cutting Code: Software and Sociality* is one of the first books to treat software seriously as a full-blown cultural process and as a subtly powerful material in contemporary communication. From deCSS to Java, from Linux to Extreme Programming, this book analyses software artworks, operating systems, commercial products, infrastructures, and programming practices. It explores social forms, identities, materialities, and power relations associated with software, and it asks how software provokes the re-thinking of production, consumption and distribution as entwined cultural processes. *Cutting Code* argues that analysis of code as a mosaic of algorithms, protocols, infrastructures, and programming conventions offers valuable insights into how contemporary social formations invent new kinds of personhood and new ways of acting.
