Manual de informática forense II

Bases teóricas complementarias. Metodología suplementaria: computación móvil

Errepar Hace ocho años, la Informática Forense era solo una asignatura en vías de desarrollo, apenas conocida entre la mayoría de los profesionales de la Criminalística, gestionada por muy pocos y casi aislada de las disciplinas que le dan razón de ser: el Derecho, la Criminalística y la Informática. En la presente publicación, el orden que mostramos no es antojadizo ni aleatorio, sino que indica un camino a seguir por todo aquel que desea desempeñarse como perito en la materia. Hoy el panorama ha cambiado -entre otras razones por la amplia difusión y recepción que tuvo el Manual de Informática Forense, ofrecido a los lectores por esta misma Editorial (2011)- y nuevamente nos encontramos con la Prof. Ing. María Elena Darahuge (práctica-procedimental) y el Prof. Ing. Luis Enrique Arellano González (desarrollo teórico-conceptual), quienes, con el auspicio de la Facultad Regional Avellaneda (Universidad Tecnológica Nacional), han complementado la obra antedicha, ampliando sus alcances sobre los componentes informáticos móviles (iPod, iPad, tablet, telefonía celular) y especificando temas de permanente actualidad, tales como la "cadena de custodia informático forense", que tanto ha dado que hablar en el entorno jurisprudencial durante el año 2012. Este Manual se integra al anterior a fin de brindar un instrumento organizado conceptual y procedimentalmente a los operadores del Derecho (jueces, funcionarios judiciales, abogados de la matrícula), ingenieros, licenciados y peritos en Informática, Sistemas o Computación, licenciados en Criminalística, profesionales y empresarios que aspiren a una visión clara y sencilla de la Problemática Informático Forense, para resolver situaciones cotidianas y darle soporte a sus decisiones. Esperamos que esta obra les proporcione la utilidad y claridad pretendidas.

Regulatory Toxicology

Springer This book will be written by experts for professionals, scientists and all those involved in toxicological data generation and decision-making. It is the updated and expanded version of a monograph published in German in 2004. Chemical safety is regulated on various levels including production, storage, transport, handling, disposal or labelling. This book deals comprehensively with the safety-ensuring methods and concepts employed by regulatory agencies, industry and academics. Toxicologists use experimental and scientific approaches for data collection, e.g. about chemical hazards, physicochemical features or toxicokinetics. The respective experimental methods are described in the book. Toxicologists also deal with much insecurity in the exposure and effect scenarios during risk assessment. To overcome these, they have different extrapolation methods and estimation procedures at their disposal. The book describes these methods in an accessible manner. Differing concepts from one regulation area to another are also covered. Reasons and consequences become evident when reading the book. Altogether, the book Regulatory Toxicology will serve as an excellent reference.

From Dissertation to Book, Second Edition

University of Chicago Press When a dissertation crosses my desk, I usually want to grab it by its metaphorical lapels and give it a good shake. “You know something!” I would say if it could hear me. “Now tell it to us in language we can understand!” Since its publication in 2005, *From Dissertation to Book* has helped thousands of young academic authors get their books beyond the thesis committee and into the hands of interested publishers and general readers. Now revised and updated to reflect the evolution of scholarly publishing, this edition includes a new chapter arguing that the future of academic writing is in the hands of young scholars who must create work that meets the broader expectations of readers rather than the narrow requirements of academic committees. At the heart of *From Dissertation to Book* is the idea that revising the dissertation is fundamentally a process of shifting its focus from the concerns of a narrow audience—a committee or advisors—to those of a broader scholarly audience that wants writing to be both informative and engaging. William Germano offers clear guidance on how to do this, with advice on such topics as rethinking the table of contents, taming runaway footnotes, shaping chapter length, and confronting the limitations of jargon, alongside helpful timetables for light or heavy revision. Germano draws on his years of experience in both academia and publishing to show writers how to turn a dissertation into a book that an audience will actually enjoy, whether reading on a page or a screen. Germano also acknowledges that not all dissertations can or even should become books and explores other, often overlooked, options, such as turning them into journal articles or chapters in an edited work. With clear directions, engaging examples, and an eye for the idiosyncrasies of academic writing, *From Dissertation to Book* reveals to recent PhDs the secrets of careful and thoughtful revision—a skill that will be truly invaluable as they add “author” to their curriculum vitae.

The Cambridge Guide to Homer

Cambridge University Press From its ancient incarnation as a song to recent translations in modern languages, Homeric epic remains an abiding source of inspiration for both scholars and artists that transcends temporal and linguistic boundaries. The Cambridge Guide to Homer examines the influence and meaning of Homeric poetry from its earliest form as ancient Greek song to its current status in world literature, presenting the information in a synthetic manner that allows the reader to gain an understanding of the different strands of Homeric studies. The volume is structured around three main themes: Homeric Song and Text; the Homeric World, and Homer in the World. Each section starts with a series of 'macropedia' essays arranged thematically that are accompanied by shorter complementary 'micropedia' articles. The Cambridge Guide to Homer thus traces the many routes taken by Homeric epic in the ancient world and its continuing relevance in different periods and cultures.

The SAGE Handbook of Media Processes and Effects

SAGE The study of media effects is one of the most central to the discipline of communication and encompasses a vast array of theoretical perspectives, methodological tools, and application to important social contexts. In light of this importance - as well as the rapid changes in the media environment that have occurred during the past 20 years - this Handbook of media effects theorizing and research explores where media effects research has been over the past several decades, and, equally important, where it would be most fruitful to go in the years ahead. In addition to providing a comprehensive framework for those interested in media effects, the Handbook also emphasizes the changing nature of the media landscape. Thus, new technologies not only provide new venues for research, but they also represent challenges to many existing media effects theories (that were formulated prior to the widespread adoption of the Internet). The contemporary diversity of the field and its research is seen in chapters addressing sociological, cultural, and organizational approaches and in chapters on specific approaches, domains, and context-related effects. Throughout the Handbook and within each chapter, authors address the following issues: (1) historical context on theory development/area of study; (2) theory explication and theoretical developments through to the present; (3) typical method of study/research approach/moderators; (4) conceptualization of the audience; (5) the impact of new media environments; (6) criticisms/controversies; and (7) directions for future research. Section I: Begins with an overview of the field, conceptualization of media effects, and the editors' goals for the volume and then focuses on the range of methodologies (both quantitative and qualitative methods) used in the study of media effects. Section II: Focuses on dominant theoretical approaches in the media effects area from a more societal perspective. Included here are some of the most dominant theoretical perspectives in the media effects realm (i.e., cultivation, agenda setting, framing) that relate to broad-reaching effects of both entertainment and news programming. The section then focuses on related theories that, though less developed, have received significant attention in the literature. To expand the horizon of this Handbook, a chapter on Cultural Studies is included to engage more qualitative views of media's societal effects. Section III: Focuses on issues of message selection and processing that are central to the mass media literature. These chapters cut across application contexts. For examples, the emotion chapter touches on entertainment, persuasion, and children's media; the Social Influence/Environmental Aspects chapter includes issues of co-viewing in families, among peers, etc. Section IV: Reflects a dominant trend in media effects literature - that related to persuasion and learning - and traces its theoretical perspectives (including major theories of persuasion and especially social cognitive theory) through the various contexts in which media have such effects, such as health, advertising, media literacy, and the like. Section V: Explores the contexts and audiences that have been traditional foci of media effects research - violence, children, body image, video games, sports, etc. In each chapter authors address the theories most applicable to those contexts, further expanding the theoretical offerings of this Handbook. The focus on how this sort of research is typically conducted methodologically and how it will need to change in light of new technologies and media advances make these chapters unique. Section VI: Expands on existing work by focusing on a concern central and unique to the communication discipline - message medium - and how it influences effects ranging from what messages are attended to (e.g., formal features), how we spend our time (e.g., displacement effects), and even how we think (e.g., medium theory).

Ending the Torment

Tackling Bullying from the Schoolyard to Cyberspace

Eighteen experts in the field of bullying and cyberbullying and the SRSG on Violence against Children, have written a unique contribution from their specific area of expertise, addressing bullying and cyberbullying. Starting with a human rights foundation and children participation, it is followed by examples that show different experiences in developing policies and legislation, including specific dimensions and vulnerable groups to be kept in mind. The publication then provides different examples of the very few evidence-based interventions that have proven to work in the prevention and respond to bullying and cyberbullying in the school and its surroundings, decreasing its prevalence. The publication ends with information on global data and the need for better collection and analysis methodologies; a section addressing some of the specific aspects presented by cyberbullying and the use of information and communication technologies, and ends with an overview of prevalence of bullying and cyberbullying in different regions in the world.
