A Professional Amateur's Guide to the Outdoors** Atlantic Monthly Press The popular Field and Stream columnist shares the many joys—and even more numerous pains—of his hilarious outdoor antics in this essay collection. For more than twenty years, Bill Heavey—a three-time National Magazine Award finalist—has staked a claim as one of America's best sportswriters. In his Field & Stream column, "A Sportsman's Life," and feature stories for that magazine and others, he takes readers across the country and beyond to experience his triumphs and failures as a suburban dad who happens to love hunting and fishing. This new collection gathers a wide range of Heavey's best work. He nearly drowns attempting to fish the pond inside the cloverleaf off an interstate highway four miles from the White House. He almost destroys a houseboat on a river in Florida and bravely buys pantyhose to save his legs on a long horseback ride into the Wyoming mountains. Whether he's hunting mule deer in Montana, draining cash on an overpriced pistol, or ruminating on the joys and agonies of outdoor gear, Heavey's tales are odes to the notion that enthusiasm is more important than skill. "Readers don't have to hunt or fish to appreciate Mr. Heavey's essays, which . . . are more complicated than they first appear. The title of his book evokes the knee-slapping comedy of the campfire, a promise that his peculiar brand of farce frequently fulfills. But he also displays a gift for the sublime." —Wall Street Journal **Mazda Bongo Friendee Service Manual Thunderbird Restoration Guide, 1958-1966** The ultimate guide to correctly restoring your T-Bird to its original factory specs. Internet of Things and Artificial Intelligence in Transportation Revolution MDPI The advent of Internet of Things offers a scalable and seamless connection of physical objects, including human beings and devices. This, along with artificial intelligence, has moved transportation towards becoming intelligent transportation. This book is a collection of eleven articles that have served as examples of the success of internet of things and artificial intelligence deployment in transportation research. Topics include collision avoidance for surface ships, indoor localization, vehicle authentication, traffic signal control, path-planning of unmanned ships, driver drowsiness and stress detection, vehicle density estimation, maritime vessel flow forecast, and vehicle license plate recognition. High-performance computing services have become more affordable in recent years, which triggered the adoption of deep-learning-based approaches to increase the performance standards of artificial intelligence models. Nevertheless, it has been pointed out by various researchers that traditional shallow-learning-based approaches usually have an advantage in applications with small datasets. The book can provide information to government officials, researchers, and practitioners. In each article, the authors have summarized the limitations of existing works and offered valuable information on future research directions.
