University Press on Demand Addressing one of the most debated revolutions in the history of our species, the change from hunting and gathering to farming, this title takes a global view, and integrates an array of information from archaeology and many other disciplines, including anthropology, botany, climatology, genetics, linguistics, and zoology. **Life After Logging Reconciling Wildlife Conservation and Production Forestry in Indonesian Borneo** *CIFOR* This book presents a technical review of ecological and life history information on a range of Bornean wildlife species, aimed at identifying what makes these species sensitive to timber harvesting practices and associated impacts. It addresses three audiences: 1) those involved in assessing and regulating timber harvesting activities in Southeast Asia, 2) those involved in trying to achieve conservation goals in the region, and 3) those undertaking research to improve multipurpose forest management. This book shows that forest management can be improved in many simple ways to allow timber extraction and wildlife conservation to be more compatible than under current practices. The recommendations can also be valuable to the many governmental and non-governmental organisations promoting sustainable forest management and eco-labelling. Finally, it identifies a number of shortcomings and gaps in knowledge, which the hope can interest the scientific community and promote further research. This review is, an important scientific step toward understanding and improving sustainable forestry practices for long-term biodiversity conservation. Even in the short term, however, significant improvements can be made to improve both conservation and the efficiency of forest management, and there is no need to delay action due to a perceived lack of information. In the longer term it is expected that the recommendations from this review will be implemented, and that further research will continue to help foster an acceptable balance among the choices needed to maintain healthy wildlife populations and biodiversity in a productive forest estate. **The Third Industrial Revolution How Lateral Power Is Transforming Energy, the Economy, and the World** *St. Martin's Press* The Industrial Revolution, powered by oil and other fossil fuels, is spiraling into a dangerous endgame. The price of gas and food are climbing, unemployment remains high, the housing market has tanked, consumer and government debt is soaring, and the recovery is slowing. Facing the prospect of a second collapse of the global economy, humanity is desperate for a sustainable economic game plan to take us into the future. Here, Jeremy Rifkin explores how Internet technology and renewable energy are merging to create a powerful "Third Industrial Revolution." He asks us to imagine hundreds of millions of people producing their own green energy in their homes, offices, and factories, and sharing it with each other in an "energy internet," just like we now create and share information online. Rifkin describes how the five-pillars of the Third Industrial Revolution will create thousands of businesses, millions of jobs, and usher in a fundamental reordering of human relationships, from hierarchical to lateral power, that will impact the way we conduct commerce, govern society, educate our children, and engage in civic life. Rifkin's vision is already gaining traction in the international community. The European Union Parliament has issued a formal declaration calling for its implementation, and other nations in Asia, Africa, and the Americas, are quickly preparing their own initiatives for transitioning into the new economic paradigm. The Third Industrial Revolution is an insider's account of the

next great economic era, including a look into the personalities and players — heads of state, global CEOs, social entrepreneurs, and NGOs — who are pioneering its implementation around the world. **Whaleboats A Kyler Martz Postcard Set The Social Archaeology of the Levant From Prehistory to the Present** *Cambridge University Press* The volume offers a comprehensive introduction to the archaeology of the southern Levant (modern day Israel, Palestine and Jordan) from the Paleolithic period to the Islamic era, presenting the past with chronological changes from hunter-gatherers to empires. Written by an international team of scholars in the fields of archaeology, epigraphy, and bioanthropology, the volume presents central debates around a range of archaeological issues, including gender, ritual, the creation of alphabets and early writing, biblical periods, archaeometallurgy, looting, and maritime trade. Collectively, the essays also engage diverse theoretical approaches to demonstrate the multi-vocal nature of studying the past. Significantly, *The Social Archaeology of the Levant* updates and contextualizes major shifts in archaeological interpretation. **What Technology Wants** *Penguin* From the author of the New York Times bestseller *The Inevitable*— a sweeping vision of technology as a living force that can expand our individual potential In this provocative book, one of today's most respected thinkers turns the conversation about technology on its head by viewing technology as a natural system, an extension of biological evolution. By mapping the behavior of life, we paradoxically get a glimpse at where technology is headed-or "what it wants." Kevin Kelly offers a dozen trajectories in the coming decades for this near-living system. And as we align ourselves with technology's agenda, we can capture its colossal potential. This visionary and optimistic book explores how technology gives our lives greater meaning and is a must-read for anyone curious about the future. **Violence and the Sacred in the Ancient Near East Girardian Conversations at Çatalhöyük** *Cambridge University Press* This book is primarily for researchers and students in the archaeology of the Ancient Near East. The volume results from intense interaction between archaeologists at these sites and a group of theorists studying the scholarship of René Girard. **Dr. Eleanor's Book of Common Ants** *University of Chicago Press* Did you know that for every human on earth, there are about one million ants? They are among the longest-lived insects—with some ant queens passing the thirty-year mark—as well as some of the strongest. Fans of both the city and countryside alike, ants decompose dead wood, turn over soil (in some places more than earthworms), and even help plant forests by distributing seeds. But while fewer than thirty of the nearly one thousand ant species living in North America are true pests, we cringe when we see them marching across our kitchen floors. No longer! In this witty, accessible, and beautifully illustrated guide, Eleanor Spicer Rice, Alex Wild, and Rob Dunn metamorphose creepy-crawly revulsion into myrmecological wonder. Emerging from Dunn's ambitious citizen science project *Your Wild Life* (an initiative based at North Carolina State University), *Dr. Eleanor's Book of Common Ants* provides an eye-opening entomological overview of the natural history of species most noted by project participants—and even offers tips on keeping ant farms in your home. Exploring species from the spreading red imported fire ant to the pavement ant, and featuring Wild's stunning photography, this guide will be a tremendous resource for teachers, students, and scientists alike. But more than this, it will transform

the way we perceive the environment around us by deepening our understanding of its littlest inhabitants, inspiring everyone to find their inner naturalist, get outside, and crawl across the dirt—magnifying glass in hand. **The World Peace Diet Eating for Spiritual Health and Social Harmony** *Lantern Books* Incorporating systems theory, teachings from mythology and religions, and the human sciences, The World Peace Diet presents the outlines of a more empowering understanding of our world, based on a comprehension of the far-reaching implications of our food choices and the worldview those choices reflect and mandate. The author offers a set of universal principles for all people of conscience, from any religious tradition, that they can follow to reconnect with what we are eating, what was required to get it on our plate, and what happens after it leaves our plates. **Against Civilization Readings and Reflections** *Feral House* Provides a collection of thought-provoking essays that look into the dehumanizing core of modern civilization, and the ideas that have given rise to the anarcho-primitivist movement. This edition includes 18 additional essays and feral illustrations by R.L. Tubbesing. --From publisher description. **Bees and Their Role in Forest Livelihoods A Guide to the Services Provided by Bees and the Sustainable Harvesting, Processing and Marketing of Their Products** *Food & Agriculture Org* This volume provides basic information about managing wild bees and on the use of their products. It identifies and describes major bee species and their importance for nature conservation and for sustaining livelihoods of rural people. Bee products are considered at both subsistence and commercial level, and particular attention is given to the potential for further development of managing wild bee species in developing countries. The role of bees for pollination of crops and the impact of managing bees on forestry and farming are presented. Wild-bee keeping techniques, honey production and marketing, and the international trade in bee products are described with further references and sources of additional information given. Using this publication, readers will better understand the complexities and opportunities for developing apiculture by rural livelihoods. Also published in French. **The Perception of the Environment Essays on Livelihood, Dwelling and Skill** *Psychology Press* An integrated approach to understanding how people live, learn, work in and perceive their environments. **Nature and Society Anthropological Perspectives** *Routledge* The contributors to this book focus on the relationship between nature and society from a variety of theoretical and ethnographic perspectives. Their work draws upon recent developments in social theory, biology, ethnobiology, epistemology, sociology of science, and a wide array of ethnographic case studies -- from Amazonia, the Solomon Islands, Malaysia, the Moluccan Islands, rural communities from Japan and north-west Europe, urban Greece, and laboratories of molecular biology and high-energy physics. The discussion is divided into three parts, emphasizing the problems posed by the nature-culture dualism, some misguided attempts to respond to these problems, and potential avenues out of the current dilemmas of ecological discourse. **Honeybees of Africa** *Springer Science & Business Media* A comprehensive review of the honeybees of Africa on a subspecies as well as by country basis. Includes an updated multivariate analysis of the subspecies based on the merger of the Ruttner database (Oberursel) and that of Hepburn & Radloff (Grahamstown) for nearly 20,000 bees. Special emphasis is placed on natural zones of

hybridisation and introgression of different populations; seasonal cycles of development in different ecological-climatological zones of the continent; swarming, migration and absconding; and an analysis of the bee flora of the continent. The text is supplemented by tables containing quantitative data on all aspects of honeybee biology, and by continental and regional maps. **Arts of Living on a Damaged Planet Ghosts and Monsters of the Anthropocene** *U of Minnesota Press* Living on a damaged planet challenges who we are and where we live. This timely anthology calls on twenty eminent humanists and scientists to revitalize curiosity, observation, and transdisciplinary conversation about life on earth. As human-induced environmental change threatens multispecies livability, *Arts of Living on a Damaged Planet* puts forward a bold proposal: entangled histories, situated narratives, and thick descriptions offer urgent “arts of living.” Included are essays by scholars in anthropology, ecology, science studies, art, literature, and bioinformatics who posit critical and creative tools for collaborative survival in a more-than-human Anthropocene. The essays are organized around two key figures that also serve as the publication’s two openings: Ghosts, or landscapes haunted by the violences of modernity; and Monsters, or interspecies and intraspecies sociality. Ghosts and Monsters are tentacular, windy, and arboreal arts that invite readers to encounter ants, lichen, rocks, electrons, flying foxes, salmon, chestnut trees, mud volcanoes, border zones, graves, radioactive waste—in short, the wonders and terrors of an unintended epoch. The book covers a wide range of topics including basic husbandry, equipment and safety, anatomy, genetics, the diagnosis and management of disease. It also includes up to date information on Varroa and other bee pests, introduces honey bee pharmacology and toxicology, and addresses native bee ecology. This new resource: Offers a guide to veterinary care of honey bees Provides information on basic husbandry, examination techniques, nutrition, and more Discusses how to successfully

handle questions and 'hive calls' Includes helpful photographs, line drawings, tables, and graphs Written for veterinary practitioners, veterinary students, veterinary technicians, scientists, and apiarists, *Honey Bee Medicine for the Veterinary Practitioner* is a comprehensive and practical book on honey bee health. **Industrial Entomology** Springer This book is a compilation of writings focused on conventional and unconventional insect products. Some of these products are commercial successes, while others are waiting to be launched and are the potential produce of the future. In addition to the well known products honey, mulberry silk, and lac, the book primarily concentrates on silk producing insects other than the mulberry silkworm, insects as food, as sources of medicines, pest and weed managers, and as pollinators. The book highlights the all pervasive role of insects in improving human lives at multiple levels. Accordingly, while most books on insects concentrate on how to limit growth in their population, it instead focuses on how to propagate them. In each chapter, the book brings to the fore how insects are far more beneficial to us than their well publicised harmful roles. This book approaches both unconventional and conventional insect products, such as honey, silk and lac in much more depth than the available literature. It investigates different aspects of the production of these insects, such as the related processes, problems and utilities, in dedicated chapters. Because this book deals with the production of insects or their produce, it has been named *Industrial Entomology*, perhaps the only book that truly reveals the tremendous potential of insects to help humans live better lives. Based on the research and working experience of the contributors, who are global experts in their respective fields, it provides authentic, authoritative and updated information on these topics. The book offers a unique guide for students, teachers, policy planners, small scale industrialists, and government ministries of agriculture and industry across the globe. It will provide a much required stimulus to insect appreciation and generate enthusiasm for research and the broader acceptance for insect produce. Hopefully, it will also present the Indian perspective on these topics to a global readership. **The Evolutionary Strategies that Shape Ecosystems** John Wiley & Sons In 1837 a young Charles Darwin took his notebook, wrote "I think" and then sketched a rudimentary, stick-like tree. Each branch of Darwin's tree of life told a story of survival and adaptation - adaptation of animals and plants not just to the environment but also to life with other living things. However, more than 150 years since Darwin published his singular idea of natural selection, the science of ecology has yet to account for how contrasting evolutionary outcomes affect the ability of organisms to coexist in communities and to regulate ecosystem functioning. In this book Philip Grime and Simon Pierce explain how evidence from across the world is revealing that, beneath the wealth of apparently limitless and bewildering variation in detailed structure and functioning, the essential biology of all organisms is subject to the same set of basic interacting constraints on life-history and physiology. The inescapable resulting predicament during the evolution of every species is that, according to habitat, each must adopt a predictable compromise with regard to how they use the resources at their disposal in order to survive. The compromise involves the investment of resources in either the effort to acquire more resources, the tolerance of factors that reduce metabolic performance, or reproduction. This three-way trade-off is the irreducible core of the universal adaptive strategy theory

which Grime and Pierce use to investigate how two environmental filters selecting, respectively, for convergence and divergence in organism function determine the identity of organisms in communities, and ultimately how different evolutionary strategies affect the functioning of ecosystems. This book reflects an historic phase in which evolutionary processes are finally moving centre stage in the effort to unify ecological theory, and animal, plant and microbial ecology have begun to find a common theoretical framework. Here are the best stories about our avian friends from the public radio show BirdNote, each brief essay illuminating the life, habits, or songs of a particular bird. Why do geese fly in a V-formation? Why are worms so good for you--if you're a robin? Which bird calls, "Who cooks for you? Who cooks for you-all?" From wrens that nest in cactuses to gulls that have a strange red dot on their bills--these digestible and fascinating bird stories are a delightful window to the winged world. A foreword by John W. Fitzpatrick, director of the Cornell Lab of Ornithology, and an introduction by Gordon Orians, professor emeritus of biology at the University of Washington, are also included. Contains web links to the audio version of each story, with bird sounds. **Flora Forager Butterfly Notecards** A wonderful pairing with the Metamorphosisjournal or a beautiful stand-alone gift, this notecard set includes 16 cards featuring 8 original compositions (with over 15 moths and butterflies), colored envelopes, and a gorgeous keepsake box. The backs of the cards list the common and scientific names of each butterfly and moth as well as the organic materials used to create each piece. **Tilapias: Biology and Exploitation** *Springer Science & Business Media* Referred to in the Bible, pictured on the wall-friezes of ancient Egyptian tombs, and a subject of fascination for generations of scientists, the tilapias (Cichlidae: Tilapiini) have featured in the diet and culture of humankind for thousands of years. The present century has seen their spread from Africa throughout the tropics and sub-tropics, largely for food and fisheries purposes. This book attempts to pull together our knowledge of this important group - their biology and fisheries and aquaculture - in a single volume, something that has not been done comprehensively for nearly two decades. A succession of chapters by acknowledged authorities covers evolution, phylogenetic relationships and biogeography, reproductive biology, mating systems and parental care, diet, feeding and digestive physiology, environmental physiology and energetics, the role of tilapias in ecosystems, population dynamics and management, genetics, seed production, nutrition, farming, economics and marketing. The book is aimed at biologists, fisheries scientists, aquaculturists, and all interested in aquatic ecology. **Measuring Arthropod Biodiversity A Handbook of Sampling Methods** *Springer Nature* This book brings together a wide range of sampling methods for investigating different arthropod groups. Each chapter is organised to describe and evaluate the main sampling methods (field methods, materials and supplies, sampling protocols, effort needed, and limitations); in addition, some

chapters describe the specimen preparation and conservation, species identification, data collection and management (treatment, statistical analysis, interpretation), and ecological/conservation implications of arthropod communities. The book aims to be a reference for zoologists, entomologists, arachnologists, ecologists, students, researchers, and for those interested in arthropod science and biodiversity. We hope the book will contribute to advance knowledge on field assessments and conservation strategies. Arthropods represent the most speciose group of organisms on Earth, with a remarkable number of species and interactions still to be described. These invertebrates are recognized for playing key ecological roles in terrestrial, freshwater and marine ecosystems. Because of the increasing and relentless threats arthropods are facing lately due to a multitude of human induced drivers, this book represents an important contribution to assess their biodiversity and role in ecosystem functioning and generation of ecosystem services worldwide. **Stingless bees culture (Meliponiculture) in Kerala: hand book for farmers** Amazon Publishers, USA Stingless bees are highly social insects which populated the tropical earth 65 million years ago longer than honey bees. They are limited to tropics and subtropics lacking venom apparatus and cannot sting. Impacts of anthropogenic influences on honey bees were already reported. Recent studies also showed that the nesting behaviour of *Trigona iridipennis* Smith in natural habitat also vary due to interaction, pheromones and environmental stimulus. A little is reported so far about the various natural and domesticated nesting of the *Trigona iridipennis* Smith in Kerala. *Trigona iridipennis* Smith shows great diversity in plant selection for dietary as well as resin sources. The shift towards ornamental plants for foraging may be an adaptation evolved in response to human modification of the environment. The bees collect resin from a variety of sources for building nest, its maintenance and also for defence. This hand book deals with several aspect of Meliponiculture and various problems dealing with stingless bees in Kerala. **Mismatch The lifestyle diseases timebomb** OUP Oxford We have built a world that no longer fits our bodies. Our genes - selected through our evolution - and the many processes by which our development is tuned within the womb, limit our capacity to adapt to the modern urban lifestyle. There is a mismatch. We are seeing the impact of this mismatch in the explosion of diabetes, heart disease and obesity. But it also has consequences in earlier puberty and old age. Bringing together the latest scientific research in evolutionary biology, development, medicine, anthropology and ecology, Peter Gluckman and Mark Hanson, both leading medical scientists, argue that many of our problems as modern-day humans can be understood in terms of this fundamental and growing mismatch. It is an insight that we ignore at our peril. **Bumblebees Behaviour, Ecology, and Conservation** Oxford University Press on Demand This book provides a concise and readable summary of the ecology and behaviour of bumblebees, with a particular focus on practical issues such as conservation strategies, management of bumblebees for crop pollination, and the possible impacts of bumblebees as non-native invasive species. **Bees Biology, Threats and Colonies** Nova Science Pub Incorporated For students of animal behaviour, honey bees are an intriguing organism, interacting in a complex eusocial colony setting as well as with the environment as they forage over wide areas. Much of that behaviour is moderated by odours, which honey bees can detect at extremely low

concentrations. This book presents current research from across the globe in the study of bees, including the importance of odour in learning and behaviour of the honeybee; the role of honeybees in pollination ecology; threats to the stingless bee in the Brazilian Amazon; honeybee viruses and age-related associative and non-associative learning performance in honeybees. **Good beekeeping practices for sustainable apiculture** *Food & Agriculture Org.* Bees provide a critical link in the maintenance of ecosystems, pollination. They play a major role in maintaining biodiversity, ensuring the survival of many plants, enhancing forest regeneration, providing sustainability and adaptation to climate change and improving the quality and quantity of agricultural production systems. In fact, close to 75 percent of the world's crops that produce fruits and seeds for human consumption depend, at least in part, on pollinators for sustained production, yield and quality. Beekeeping, also called apiculture, refers to all activities concerned with the practical management of social bee species. These guidelines aim to provide useful information and suggestions for a sustainable management of bees around the world, which can then be applied to project development and implementation. **Value-added Products from Beekeeping** *Food & Agriculture Org.* The purpose of this bulletin is to introduce beekeepers, people considering keeping bees and those interested in processing and marketing to the large diversity of products that can be derived from beekeeping for income generation. Each product category, including cosmetics, derived from basic bee products such as honey, pollen, wax, propolis, royal jelly, venom, adult and larval honeybees, is presented in this publication, providing history, description, product quality, marketing aspects and a few selected recipes. A detailed bibliography, a list of suppliers of equipment, conversion of weights and Codex Alimentarius Standards for Honey are given in the annexes. **Consuming Habits Drugs in History and Anthropology** *Routledge* Covering a wide range of substances, including opium, cocaine, coffee, tobacco, kola, and betelnut, from prehistory to the present day, this new edition has been extensively updated, with an updated bibliography and two new chapters on cannabis and khat. Consuming Habits is the perfect companion for all those interested in how different cultures have defined drugs across the ages. Psychoactive substances have been central to the formation of civilizations, the definition of cultural identities, and the growth of the world economy. The labelling of these substances as 'legal' or 'illegal' has diverted attention away from understanding their important cultural and historical role. This collection explores the rich analytical category of psychoactive substances from challenging historical and anthropological perspectives. **Swarm Robotics: A Formal Approach** *Springer* This book provides an introduction to Swarm Robotics, which is the application of methods from swarm intelligence to robotics. It goes on to present methods that allow readers to understand how to design large-scale robot systems by going through many example scenarios on topics such as aggregation, coordinated motion (flocking), task allocation, self-assembly, collective construction, and environmental monitoring. The author explains the methodology behind building multiple, simple robots and how the complexity emerges from the multiple interactions between these robots such that they are able to solve difficult tasks. The book can be used as a short textbook for specialized courses or as an introduction to Swarm Robotics for graduate students, researchers, and professionals who want a concise introduction to the

field. **Paleonutrition** *University of Arizona Press* Urgeschichte - Ernährung - Nahrung - Anthropologie - Methode - Theorie - Ethnoarchäologie. **Herpetological Osteopathology Annotated Bibliography of Amphibians and Reptiles** *Springer Science & Business Media* As scientific analysis of testable hypotheses has replaced the speculative approach to study of bone disease in recent and fossil amphibians and reptiles, the field has advanced from simply reporting observations to analyzing their implications. This process is predicated upon a reproducible data base which explains/diagnoses the nature of bony alterations and a secure review of the literature. Thereby hangs the rub. The herpetological literature are difficult to access (let alone read) and are scattered through many prominent and eclectic journals and in the lay literature. While older diagnoses often have not stood the test of time, the clarity of report descriptions usually allows confident identification of the underlying pathology. **Small Scale Beekeeping Oat History, Identification and Classification**
