### Awakening Victory

How Iraqi Tribes and American Troops Reclaimed Al Anbar and Defeated Al Qaeda in Iraq

**Casebate** *In August 2006, many senior U.S. officials thought America had lost the war in Iraq, as the senior U.S. Marine Corps intelligence officer there wrote that control of al Anbar Province, the seat of the raging Sunni insurgency, was irrevocably lost to the insurgents. During that time, there were over 100 attacks per day against U.S. military and Iraqi forces in al Anbar, and al Qaeda in Iraq had planted their flag in the provincial capital, Ramadi, declaring it the capital of their new Islamic State of Iraq. In January 2007, as a spearhead of the newly decided OSurge, the 3rd Battalion, 69th Armored Regiment deployed to Ramadi as part of the 3rd Infantry Division, the first regular Army unit to deploy to Iraq for a third time. The battalion and its parent brigade went to work in a campaign that will be seen as the D-Day of the Global War on Terror. Starting by clearing al Qaeda from the city of Ramadi and replacing them with legitimate locally raised and trained Iraqi police while simultaneously fostering the tribal movement known as the Awakening Councils the brigade began to have tremendous success. By April 2007, attacks within Ramadi went from twenty per day to one or two per week. By mid-summer 2007, attacks in the entire province were down 90 percent from 2006. Furthermore, the Awakening had swept through the rest of Iraq, leading to the best security situation seen since 2003. The 3rd Battalion, 69th Armored, was the only battalion to participate in this campaign from start to finish. Moreover, many of the US successes came directly from this unit's work. Awakening Victory tells the story of this incredible campaign through the eyes of the commander of the 3rd Battalion, who was right in the thick of the fight. The book also provides a description of the Iraqi insurgency particularly al Qaeda in Iraq that offers the depth and texture which are currently lacking in most Americans' perceptions of the war. It describes the battalion's actions, including incidents previously unknown to the public, but it is not merely another blood-and-guts war story. The author uses the actions of his battalion to describe a paradigm shift that occurred, while in a totally foreign culture, yet allowed for a move from a war of bombs and bullets to one of partnership and ideas. The author, Lt. Col. Michael E. Silverman (ret) is a political scientist and historian by education and*

has extensive experience in both warfare and Middle Eastern affairs, including a tour as an advisor to a Saudi Arabian infantry battalion in Riyadh. Silverman served a two-year detail to the Central Intelligence Agency at their Langley headquarters between his last two tours in Iraq. There he was privy to the Director's Weekly Iraq Briefing, a working group that discussed issues on the war, many of which ultimately found their way into the President's Daily Briefing. Well-versed in international affairs and world religions, he writes with the authority of someone who has both been blown-up by an IED and helped to shape US strategic policy for the Global War on Terror. In this book he describes, from the very front line, the exact turning point where the United States turned a supposedly failed war into a possibly enduring success.

## Auto Repair For Dummies

**John Wiley & Sons** *Auto Repair For Dummies, 2nd Edition* (9781119543619) was previously published as *Auto Repair For Dummies, 2nd Edition* (9780764599026). While this version features a new Dummies cover and design, the content is the same as the prior release and should not be considered a new or updated product. The top-selling auto repair guide--400,000 copies sold--now extensively reorganized and updated Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. For new or would-be do-it-yourself mechanics, this illustrated how-to guide has long been a must and now it's even better. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair information throughout, eliminating discussions of carburetors and adding coverage of hybrid and alternative fuel vehicles. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the *Los Angeles Times* and has been interviewed on the *Today* show, *NBC Nightly News*, and other television programs.

## Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles

**National Academies Press** *The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.*

### Carbon Utilization

### Applications for the Energy Industry

**Springer** This book provides in-depth information on topics relating to anthropogenic carbon dioxide utilization processes. Presenting a collection of state-of-the-art scientific reviews and research perspectives on carbon management strategies of relevance to the energy industry, it features contributions by leading scientists and technocrats across 19 chapters as an Indian contribution. In the energy industry, new processes for carbon dioxide removal and recycling are developing quickly, and it is in this context that the book provides an opportunity to review the current status of and promote efforts to achieve effective carbon capture and management. The contents presented here will prove useful to researchers, students, industry experts, scientists and policymakers alike.

### Studies of Epithelial Transporters and Ion Channels

### Ion Channels and Transporters of Epithelia in Health and Disease - Vol. 3

**Springer Nature** This book discusses unique ion channels and transporters that are located within epithelial tissues of various organs including the kidney, intestine, pancreas and respiratory tract. The authors will show, that each of these channels and transporters play crucial roles in transepithelial ion and fluid transport across epithelia and their responsibility in maintaining homeostasis. The reader gains an understanding of the fundamentals of epithelial ion transport, in terms of function, modelling, regulation, trafficking, structure and pharmacology. This is the third of three volumes highlighting the importance of epithelial ion channels and transporters in basic physiology and pathophysiology of human diseases. The focus of this volume lies with different ion channel and transporter families. Additionally, this volume benefits from pharmaceutical contributors and their insights into recent pre-clinical drug discovery efforts and results from clinical trials. Overall, these chapters offer a more thorough coverage of individual epithelial ion channels and transporters from the 1st Edition, along with eleven new chapters. That makes Volume 3 an insightful contribution for physiology students, scientists and clinicians.

## Humankind

## A Hopeful History

**Little, Brown** **AN INSTANT NEW YORK TIMES BESTSELLER** *The "lively" (The New Yorker), "convincing" (Forbes), and "riveting pick-me-up we all need right now" (People) that proves humanity thrives in a crisis and that our innate kindness and cooperation have been the greatest factors in our long-term success as a species. If there is one belief that has united the left and the right, psychologists and philosophers, ancient thinkers and modern ones, it is the tacit assumption that humans are bad. It's a notion that drives newspaper headlines and guides the laws that shape our lives. From Machiavelli to Hobbes, Freud to Pinker, the roots of this belief have sunk deep into Western thought. Human beings, we're taught, are by nature selfish and governed primarily by self-interest. But what if it isn't true? International bestseller Rutger Bregman provides new perspective on the past 200,000 years of human history, setting out to prove that we are hardwired for kindness, geared toward cooperation rather than competition, and more inclined to trust rather than distrust one another. In fact this instinct has a firm evolutionary basis going back to the beginning of Homo sapiens. From the real-life Lord of the Flies to the solidarity in the aftermath of the Blitz, the hidden flaws in the Stanford prison experiment to the true story of twin brothers on opposite sides who helped Mandela end apartheid, Bregman shows us that believing in human generosity and collaboration isn't merely optimistic—it's realistic. Moreover, it has huge implications for how society functions. When we think the worst of people, it brings out the worst in our politics and economics. But if we believe in the reality of humanity's kindness and altruism, it will form the foundation for achieving true change in society, a case that Bregman makes convincingly with his signature wit, refreshing frankness, and memorable storytelling. "The Sapiens of 2020." —The Guardian "Humankind made me see humanity from a fresh perspective." —Yuval Noah Harari, author of the #1 bestseller Sapiens Longlisted for the 2021 Andrew Carnegie Medal for Excellence in Nonfiction One of the Washington Post's 50 Notable Nonfiction Works in 2020*

## Interpreting the Late Neolithic of Upper Mesopotamia

**Brepols Pub** *The times between the Neolithic and Urban revolutions in Mesopotamia have for a long time been interpreted as a period of stagnation. This volume is part of an emerging discourse that challenges such assumptions. Focussing upon the northern parts of ancient Western Asia, where most recent research has concentrated, an international group of researchers demonstrates that Upper Mesopotamia underwent complex historical changes that we just begin to grasp fully. The Late Neolithic was a critical phase of the history of the ancient Middle East. Authors investigate settlement patterns, practices of painting pottery, distributions of various raw materials, the role of craft industries, the emergence of seals and other issues from a variety of theoretical and practical questions. The book is a must-have for prehistorians working in the Near East, and a rich source of information for archaeologists working in other parts of the world. Olivier Nieuwenhuys is a Research Fellow at Leiden University and at the DAI-Berlin. His research focuses on reconstructions of landscape and prehistoric settlement and the meanings of material culture. Reinhard Bernbeck is professor at the Freie Universitat Berlin and Binghamton University, New York. His research focuses on critical assessments of ancient Western Asian prehistory and historical periods. Peter Akkermans is professor at Leiden University. He is the director of the excavations at Tell Sabi Abyad and had published widely on the prehistory of the ancient Near East.*

## Modeling, Design, Construction, and Operation of Power Generators with Solid Oxide Fuel Cells From Single Cell to Complete Power System

**Springer** *The book summarizes the current state of the solid oxide fuel cell (SOFC) technology in power generation applications. It describes the single cells, SOFC stacks, micro-combined heat and power systems, large-scale stationary power generators and polygeneration units. The principles of modeling, simulation and controls of power systems with solid oxide fuel cells are presented and discussed. Authors provide theoretical background of the technology followed by the essential insights into the integrated power systems. Selected aspects of the design, construction and operation of power units in range from single kilowatts to hundreds of kilowatts are presented. Finally, the book reports the selected studies on prototype systems which have been constructed in Europe. The book discusses the theoretical and practical aspects of operation of power generators with solid oxide fuel cells including fabrication of cells, design of stacks, system modeling, simulation of stationary and non-stationary operation of systems, fuel preparation and controls.*

## Assessment of Fuel Economy Technologies for Light-Duty Vehicles

**National Academies Press** *Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption—the amount of fuel consumed in a given driving distance—because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.*
