Diesel and Gasoline Engine Exhausts and Some Nitroarenes

In 1988, IARC classified diesel exhaust as probably carcinogenic to humans (Group 2A). An Advisory Group which reviews and recommends future priorities for the IARC Monographs Program had recommended diesel exhaust as a high priority for re-evaluation since 1998. There has been mounting concern about the cancer-causing potential of diesel exhaust, particularly based on findings in epidemiological studies of workers exposed in various settings. This was re-emphasized by the publication in March 2012 of the results of a large US National Cancer Institute/National Institute for Occupational Safety and Health study of occupational exposure to such emissions in underground miners, which showed an increased risk of death from lung cancer in exposed workers. The scientific evidence was reviewed thoroughly by the Working Group and overall it was concluded that there was sufficient evidence in humans for the carcinogenicity of diesel exhaust. The Working Group found that diesel exhaust is a cause of lung cancer (sufficient evidence) and also noted a positive association (limited evidence) with an increased risk of bladder cancer (Group 1). The Working Group concluded that gasoline exhaust was possibly carcinogenic to humans (Group 2B), a finding unchanged from the previous evaluation in 1989.

New Trends in Grammaticalization and Language Change

John Benjamins Publishing Company The chapters in this volume present a state of the art of grammaticalization research in the 2010s. They are concerned with the application of new models, such as constructionalization, the ongoing debate about the status and modelling of the development of discourse markers, and reveal a renewed interest in the typological application of grammaticalization and in the cognitive motivations for unidirectionality. The contributors consider data from a wide range of languages, including several that have not or marginally been looked at in terms of grammaticalization: Chinese, Dutch, (varieties of) English, French, German, Japanese, Maltese, Old Saxon, Spanish, and languages of the South Caucasian and Zhuang Tai-Kadai families. The chapters range from theoretical discussions to fine-grained analyses of new historical and comparative language data. This volume will be of interest to linguists studying morphosyntactic changes in a range of languages, and in particular to those interested in models for grammatical change.

Tezcatlipoca

Trickster and Supreme Deity

University Press of Colorado Tezcatlipoca: Trickster and Supreme Deity brings archaeological evidence into the body of scholarship on "the lord of the smoking mirror," one of the most important Aztec deities. While iconographic and textual resources from sixteenth-century chroniclers and codices have contributed greatly to the understanding of Aztec religious beliefs and practices, contributors to this volume demonstrate the diverse ways material evidence expands on these traditional sources. The interlocking complexities of Tezcatlipoca's nature, multiple roles, and metaphorical attributes illustrate the extent to which his influence penetrated Aztec belief and social action across all levels of late Postclassic central Mexican culture. Tezcatlipoca examines the results of archaeological investigations—objects like obsidian mirrors, gold, bells, public stone monuments, and even a mosaic skull—and reveals new insights into the supreme deity of the Aztec pantheon and his role in Aztec culture.
