PATIENT SAFETY AND QUALITY

AN EVIDENCE-BASED HANDBOOK FOR NURSES

"Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need to know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)."--Online AHRQ blurb, <http://www.ahrq.gov/qual/nursesdbk>.

IMPROVING HEALTHCARE QUALITY IN EUROPE CHARACTERISTICS, EFFECTIVENESS AND IMPLEMENTATION OF DIFFERENT STRATEGIES

CHARACTERISTICS, EFFECTIVENESS AND IMPLEMENTATION OF DIFFERENT STRATEGIES

OECD Publishing This volume, developed by the Observatory together with OECD, provides an overall conceptual framework for understanding and applying strategies aimed at improving quality of care. Crucially, it summarizes available evidence on different quality strategies and provides recommendations for their implementation. This book is intended to help policy-makers to understand concepts of quality and to support them to evaluate single strategies and combinations of strategies.

TEXTBOOK OF PUBLIC HEALTH DENTISTRY - E-BOOK

Elsevier Health Sciences The third edition of the book is thoroughly updated and presented in new four-colour format. Based on the syllabus prescribed by Dental Council of India, the book covers various aspects of public health, dental public health, preventive dentistry, social sciences and research methodology through simple presentations of the content. The book is specifically designed to cater the needs of undergraduate students, would also be useful for postgraduate students and academicians. Salient Features Provides comprehensive elucidation of Public Health Dentistry covering from the very basics to current understanding of the discipline Categorization of chapters in sections helps to provide continuity and clarity to the readers Thoroughly updated chapters on infection control in Dental Setting, Forensic Dentistry, Hospital Administration, Occupational Hazards, Nutrition And Oral Health, Minimal Invasive Dentistry, National Oral Health Policy, Global Perspective of Fluorides and Dental Practice Management Contemporary issues are highlighted with more organized and rational description Includes some useful information like facts about tobacco, fluorides and clinical cases proforma separately under the Appendices Additional Features Complimentary access to enhanced e-book for digital assets: Procedural videos Lecture notes on important topics New to This Edition Includes new chapter on Primary Oral Health Care Program Addition of many new figures, tables, flowcharts to facilitate greater retention of knowledge

MEDICAL RECORDS MANUAL

A GUIDE FOR DEVELOPING COUNTRIES

This manual is aimed at helping medical record workers in the development and management of medical records services of health care facilities in developing countries in an effective and efficient manner. It has not been designed as an introductory text to medical record management, but rather as an aid to medical record officers (MROs) and medical record clerks by describing appropriate systems for Medical Records Departments in developing countries. It covers manual procedures and may be used as an adjunct to computerized systems. It does not provide all of the options for medical record management, but it does provide one option in each area for the management of medical records in developing countries. A list of the textbooks that provide detailed information on medical record management is also provided.

PREVENTION AND CONTROL OF INFECTIONS IN HOSPITALS

PRACTICE AND THEORY

Springer This volume offers extensive information on preventive and infection surveillance procedures, routines and policies adapted to the optimal infection control level needed to tackle today's microbes in hospital practice. It especially focuses on preventive measures for serious hospital infections. Each chapter includes a practical section that addresses the main aspects of procedures and treatment, and a theoretical section that contains updated documentation that can be used for further study, or to help select infection control measures. Infection control concerns all healthcare professional working directly or indirectly with patients; in diagnosis, treatment, isolation measures, operations, equipment, drugs, cleaning, textiles, transport, porter service, food and water, building and maintenance, etc. Hygiene and environmental control is central to infection prevention for patients, visitors and staff alike. Good hygienic practices, individual infection control, well implemented and frequent environmental cleaning, and a high professional standard of hygiene in the treatment and care of patients, are essential to patient safety and a safe working environment. Addressing this essential topic, this book is intended for doctors, nurses and other healthcare workers, students in health-related subjects, hospital managers and health bureaucrats, as well as patients and their families.

A GUIDE TO ESTABLISHING A NATIONAL HAEMOVIGILANCE SYSTEM

Haemovigilance includes the monitoring, reporting, investigation, and analysis of adverse events related to the donation, processing, and transfusion of blood and taking actions to prevent their occurrence or recurrence. The document aims to support countries in establishing effective national systems for haemovigilance throughout the transfusion chain. It provides policy guidance on establishing a haemovigilance system as part of the national blood and health systems and includes technical information and guidance on the specific measures and actions necessary for implementing a haemovigilance system. This document is intended for ministries of health; bodies responsible for policy-making on blood safety, such as national blood commissions or councils; regulatory agencies; public health institutions; blood transfusion services, blood centers, and plasma collection centers; hospitals, including hospital blood banks or health care facilities where transfusion takes place; blood donor organizations and other nongovernmental organizations involved in blood donor education and recruitment; patient groups; scientific and professional bodies; and developmental partners and international organizations.

NURSING CARE PLANNING MADE INCREDIBLY EASY!

Lippincott Williams & Wilkins The new edition of Nursing Care Planning Made Incredibly Easy is the resource every student needs to master the art of care planning, including concept mapping. Starting with a review of the nursing process, this comprehensive resource provides the foundations needed to write practical, effective care plans for patients. It takes a step-by-step approach to the care planning process and builds the critical thinking skills needed to individualize care in the clinical setting. Special tips and information sections included throughout the book help students incorporate evidence-based standards and rationales into their nursing interventions.

CROSSING THE QUALITY CHASM

A NEW HEALTH SYSTEM FOR THE 21ST CENTURY

National Academies Press Second in a series of publications from the Institute of Medicine's Quality of Health Care in America project Today's health care providers have more research findings and more technology available to them than ever before. Yet recent reports have raised serious doubts about the quality of health care in America. Crossing the Quality Chasm makes an urgent call for fundamental change to close the quality gap. This book recommends a sweeping redesign of the American health care system and provides overarching principles for specific direction for policymakers, health care leaders, clinicians, regulators, purchasers, and others. In this comprehensive volume the committee offers: A set of performance expectations for the 21st century health care system. A set of 10 new rules to guide patient-clinician relationships. A suggested organizing framework to better align the incentives inherent in payment and accountability with improvements in quality. Key steps to promote evidence-based practice and strengthen clinical information systems. Analyzing health care organizations as complex systems, Crossing the Quality Chasm also documents the causes of the quality gap, identifies current practices that impede quality care, and explores how systems approaches can be used to implement change.

WHO GUIDELINES FOR SAFE SURGERY 2009

SAFE SURGERY SAVES LIVES

Confronted with worldwide evidence of substantial public health harm due to inadequate patient safety, the World Health Assembly (WHA) in 2002 adopted a resolution (WHA55.18) urging countries to strengthen the safety of health care and monitoring systems. The resolution also requested that WHO take a lead in setting global norms and standards and supporting country efforts in preparing patient safety policies and practices. In May 2004, the WHA approved the creation of an international alliance to improve patient safety globally; WHO Patient Safety was launched the following October. For the first time, heads of agencies, policy-makers and patient groups from around the world came together to advance attainment of the goal of "First, do no harm" and to reduce the adverse consequences of unsafe health care. The purpose of WHO Patient Safety is to facilitate patient safety policy and practice. It is concentrating its actions on focused safety campaigns called Global Patient Safety Challenges, coordinating Patients for Patient Safety, developing a standard taxonomy, designing tools for research policy and assessment, identifying solutions for patient safety, and developing reporting and learning initiatives aimed at producing 'best practice' guidelines. Together these efforts could save millions of lives by improving basic health care and halting the diversion of resources from other productive uses. The Global Patient Safety Challenge, brings together the expertise of specialists to improve the safety of care. The area chosen for the first Challenge in 2005-2006, was infection associated with health care. This campaign established simple, clear standards for hand hygiene, an educational campaign and WHO's first Guidelines on Hand Hygiene in Health Care. The problem area selected for the second Global Patient Safety Challenge, in 2007-2008, was the safety of surgical care. Preparation of these Guidelines for Safe Surgery followed the steps recommended by WHO. The groundwork for the project began in autumn 2006 and included an international consultation meeting held in January 2007 attended by experts from around the world. Following this meeting, expert working groups were created to systematically review the available scientific evidence, to write the guidelines document and to facilitate discussion among the working group members in order to formulate the recommendations. A steering group consisting of the Programme Lead, project team members and the chairs of the four working groups, signed off on the content and recommendations in the guidelines document. Nearly 100 international experts contributed to the document (see end). The guidelines were pilot tested in each of the six WHO regions--an essential part of the Challenge--to obtain local information on the resources required to comply with the recommendations and information on the feasibility, validity, reliability and cost-effectiveness of the interventions.

THE CREDENTIALING AND PRIVILEGING TOOLBOX

MSPs and medical staff leaders do enough vetting for practitioner applications without worrying about tracking down and validating resources that support structurally sound credentialing and privileging processes. Featuring an array of field-sourced, expert-endorsed forms that facilitate regulatory compliance, policy development, and routine credentialing communications, The Credentialing and Privileging Toolbox lightens the administrative load so MSPs and medical staff leaders have more time for duties that foster high-quality care and patient safety. Inspired by our popular OPPE and FPPE toolboxes, The Credentialing and Privileging Toolbox offers a bevy of sample forms, policies, letters, plans, reports, and related resources that healthcare organizations of various scope, size, and service focus are currently using to execute effective practitioner vetting processes. Included tools, which come from in-the-trenches MSPs and medical staff leaders, have been curated and appraised by expert author Merella Schandl. The resulting collection reflects industry best practices, the wide range of modern healthcare entities that credential and privilege practitioners, and the various aspects of a successful vetting approach. Tools are arranged by type and topic for easy navigation. Within each tool, Schandl highlights key components and provides targeted analysis on tailoring the sample to individual facility needs.

REMINGTON

ESSENTIALS OF PHARMACEUTICS

Provides a concise yet detailed resource covering all aspects of pharmaceuticals, from the scientific fundamentals to the dosage forms and drug delivery systems to drug product analyses. Assists with integrating the science of pharmacy into practice. Chapters from the original parent text Remington: The Science and Practice of Pharmacy 22nd edition were specifically selected to create this new edition. The text pulls heavily from the Pharmaceuticals and Pharmaceutical Dosage Forms sections. Various delivery systems and dosage forms are covered as well as parenterals, sterilization processes, and sterile compounding. One chapter addresses pharmaceutical excipients and another discusses pharmaceutical packaging. Pharmaceutical analysis, product characterization, quality control, stability, bioavailability, and dissolution are also covered. Fundamental scientific concepts including thermodynamics, ionic solutions and electrolyte equilibria, tonicity, chemical kinetics, rheology, complex formation and interfacial phenomenon are presented. The text also provides an introduction to pharmacokinetics and pharmacodynamics and the principles of absorption, distribution, metabolism and excretion. In addition, some introductory concepts on drug discovery and drug product approval as well as information resources in pharmacy and the pharmaceutical sciences are presented.

MOSBY'S MEDICAL DICTIONARY - E-BOOK

Elsevier Health Sciences So much more than just a bestselling dictionary, Mosby's Medical Dictionary, 9th Edition is a one-stop reference to help you make sense of the complex world of health care. It features over 56,000 authoritative definitions, quick-reference appendixes, a color atlas of the human body, and more than 2,450 full-color illustrations — nearly three times more than any other dictionary available — making it an indispensable reference for health care consumers and professionals alike. **UNIQUE!** More than 2,450 color photographs and line drawings demonstrate and explain complex conditions and abstract concepts. Over 56,000 comprehensive, authoritative, high-quality definitions include expanded definitions for selected entries, particularly major diseases, disorders, and procedures. A Color Atlas of Human Anatomy contains 43 pages of clearly labeled drawings for easy A&P review and reference. Quick-reference appendixes offer quick access to useful reference information, such as commonly used abbreviations, language translation guides, American sign language, and more. A strict, common-sense alphabetical organization with no subentries makes it easy to find key terms and definitions. **NEW!** Over 300 new and updated illustrations visually clarify key definitions and reflect current health care practice and equipment. **NEW!** Approximately 11,000 new and revised definitions reflect the latest developments in health care. **NEW!** Editor Marie O'Toole, EdD, RN, FAAN lends her expertise to this new edition, reviewing and revising all definitions and assembling a team of leading consultants and contributors.

TRANSFORMING CLINICAL RESEARCH IN THE UNITED STATES

CHALLENGES AND OPPORTUNITIES: WORKSHOP SUMMARY

National Academies Press An ideal health care system relies on efficiently generating timely, accurate evidence to deliver on its promise of diminishing the divide between clinical practice and research. There are growing indications, however, that the current health care system and the clinical research that guides medical decisions in the United States falls far short of this vision. The process of generating medical evidence through clinical trials in the United States is expensive and lengthy, includes a number of regulatory hurdles, and is based on a limited infrastructure. The link between clinical research and medical progress is also frequently misunderstood or unsupported by both patients and providers. The focus of clinical research changes as diseases emerge and new treatments create cures for old conditions. As diseases evolve, the ultimate goal remains to speed new and improved medical treatments to patients throughout the world. To keep pace with rapidly changing health care demands, clinical research resources need to be organized and on hand to address the numerous health care questions that continually emerge. Improving the overall capacity of the clinical research enterprise will depend on ensuring that there is an adequate infrastructure in place to support the investigators who conduct research, the patients with real diseases who volunteer to participate in experimental research, and the institutions that organize and carry out the trials. To address these issues and better understand the current state of clinical research in the United States, the Institute of Medicine's (IOM) Forum on Drug Discovery, Development, and Translation held a 2-day workshop entitled Transforming Clinical Research in the United States. The workshop, summarized in this volume, laid the foundation for a broader initiative of the Forum addressing different aspects of clinical research. Future Forum plans include further examining regulatory, administrative, and structural barriers to the effective conduct of clinical research; developing a vision for a stable, continuously funded clinical research infrastructure in the United States; and considering strategies and collaborative activities to facilitate more robust public engagement in the clinical research enterprise.

CHALLENGES AND PROSPECTS FOR CLINICAL TRIALS IN INDIA

A REGULATORY PERSPECTIVE

THE PEDIATRIC PROCEDURAL SEDATION HANDBOOK

Oxford University Press, USA The Pediatric Procedural Sedation Handbook provides a comprehensive but concise review of the essential information needed to allow for the safe practice of pediatric procedural sedation. Written by a group of multidisciplinary authors, this text explores the fundamentals of sedation, procedural sedation, special patient considerations, diagnostic and therapeutic procedures, and more. Each chapter offers a starting point and suggestions for further in-depth study of all aspects of providing safe, effective, multidisciplinary-team based sedation care for children undergoing testing and procedures outside of an operating room setting. Appendixes providing medication dosing and delivery route suggestions complement the text and can be used for quick reference. This book is a must-read for any clinician involved in modern, team-based patient-centered care, including physicians, nurses, dentists, and child life specialists. Editors and authors are members of the Society of Pediatric Sedation, a multidisciplinary society dedicated to the advance of pediatric sedation by promoting safe, high quality care, innovative research, and quality professional education.

REQUIREMENTS FOR THE RETENTION OF LABORATORY RECORDS AND DIAGNOSTIC MATERIAL

STANDARDS AND GUIDELINES

"This is the fifth edition of the NPAAC requirements for the retention of laboratory records and diagnostic materials. This edition is substantially the same as the fourth edition, with only minor amendments to the fourth edition. Since the publication of the third edition, there have been significant developments in Australian laboratory practice. For example, all pathology laboratories are now required to maintain a formal quality system, and must be accredited to ISO 15189 (AS4633). In addition, new privacy principles and legislation have come into effect, legislation has clarified the status of retained human parts and tissues, and the Human Genetics Advisory Commission (HGAC) has been formed. To address these developments, NPAAC has completely revised the requirements for retention, and has adopted guiding principles to create a uniform and integrated approach to retention requirements."--Introduction, p. 1.

STANDARD OPERATING PROCEDURES FOR PET/CT

A PRACTICAL APPROACH FOR USE IN ADULT ONCOLOGY

International Atomic Energy Agency Over the past 20 years, positron emission tomography (PET) and PET/CT (computed tomography) have revolutionized the care of cancer patients in developed countries and are increasingly being adopted in emerging economies. PET has been, and still is, one of the fastest growing fields in medical imaging. There are several reasons for the rapid development of this imaging technology. As the populations of many countries continue to age, cancer constitutes a major health problem, with increasing incidence worldwide. In developed countries where heart disease is the primary cause of mortality, cancer is a close second and may eventually overtake it. Proper cancer management requires highly accurate imaging to characterise, stage, restage, assess response to therapy, prognosticate and detect recurrence. Such information is critical in a disease that often requires the correct initial treatment in order to improve the chance of successfully curing the patient. Written by experts from several continents, the book provides an up to date, evidence based and comprehensive overview of operating procedures for FDG-PET/CT imaging in adult oncology patients.

WHO GUIDELINES ON DRAWING BLOOD

BEST PRACTICES IN PHLEBOTOMY

Phlebotomy uses large, hollow needles to remove blood specimens for lab testing or blood donation. Each step in the process carries risks - both for patients and health workers. Patients may be bruised. Health workers may receive needle-stick injuries. Both can become infected with bloodborne organisms such as hepatitis B, HIV, syphilis or malaria. Moreover, each step affects the quality of the specimen and the diagnosis. A contaminated specimen will produce a misdiagnosis. Clerical errors can prove fatal. The new WHO guidelines provide recommended steps for safe phlebotomy and reiterate accepted principles for drawing, collecting blood and transporting blood to laboratories/blood banks.

COUNSELLING FOR MATERNAL AND NEWBORN HEALTH CARE

A HANDBOOK FOR BUILDING SKILLS

World Health Organization The main aim of this practical Handbook is to strengthen counselling and communication skills of skilled attendants (SAs) and other health providers, helping them to effectively discuss with women, families and communities the key issues surrounding pregnancy, childbirth, postpartum, postnatal and post-abortion care. The MNH Counselling Handbook is chiefly designed to be used by groups of SAs with the help of a facilitator. It can also be used by individual SAs who can get together with colleagues for discussions and activities where needed. It relies on a self-directed learning approach, allowing SAs to work at their own pace, drawing on their past counselling experience. The way it is used will be determined by each country's context, and the SAs preference. The MNH Counselling Handbook is divided into three main sections. Part 1 is an introduction which describes the aims and objectives and the general layout of the Handbook. Part 2 describes the counselling process and outlines the six key steps to effective counselling. It explores the counselling context and factors that influence this context including the socio-economic, gender, and cultural environment. A series of guiding principles is introduced and specific counselling skills are outlined. Part 3 focuses on different maternal and newborn health topics, including general care in the home during pregnancy; birth and emergency planning; danger signs in pregnancy; post-abortion care; support during labour; postnatal care of the mother and newborn; family planning counselling; breastfeeding; women with HIV/AIDS; death and bereavement; women and violence; linking with the community. Each Session contains specific aims and objectives, clearly outlining the skills that will be developed and corresponding learning outcomes. Practical activities have been designed to encourage reflection, provoke discussions, build skills and ensure the local relevance of information. There is a review at the end of each session to ensure the SAs have understood the key points before they progress to subsequent sessions.

HIGH QUALITY CARE FOR ALL

NHS NEXT STAGE REVIEW FINAL REPORT

The Stationery Office This review incorporates the views and visions of 2,000 clinicians and other health and social care professionals from every NHS region in England, and has been developed in discussion with patients, carers and the general public. The changes proposed are locally-led, patient-centred and clinically driven. Chapter 2 identifies the challenges facing the NHS in the 21st century: ever higher expectations; demand driven by demographics as people live longer; health in an age of information and connectivity; the changing nature of disease; advances in treatment; a changing health workplace. Chapter 3 outlines the proposals to deliver high quality care for patients and the public, with an emphasis on helping people to stay healthy, empowering patients, providing the most effective treatments, and keeping patients as safe as possible in healthcare environments. The importance of quality in all aspects of the NHS is reinforced in chapter 4, and must be understood from the perspective of the patient's safety, experience in care received and the effectiveness of that care. Best practice will be widely promoted, with a central role for the National Institute for Health and Clinical Excellence (NICE) in expanding national standards. This will bring clarity to the high standards expected and quality performance will be measured and published. The review outlines the need to put frontline staff in control of this drive for quality (chapter 5), with greater freedom to use their expertise and skill and decision-making to find innovative ways to improve care for patients. Clinical and managerial leadership skills at the local level need further development, and all levels of staff will receive support through education and training (chapter 6). The review recommends the introduction of an NHS Constitution (chapter 7). The final chapter sets out the means of implementation.

Jaypee Brothers Medical Publishers

INFECTION CONTROL IN THE INTENSIVE CARE UNIT

Springer Science & Business Media Intensive care is a rapidly changing area of medicine, and after four years from the 2nd edition the volume editors and authors have deemed necessary to update it. In the recent years, in fact, five new randomised controlled trials and five new meta-analyses demonstrate that selective decontamination of the digestive tract [SDD] is an antimicrobial prophylaxis to prevent severe infections of not only lower airways but also of blood. Additionally, SDD has been shown to reduce inflammation including multiple organ failure and mortality. An intriguing observation is the evidence that SDD using parenteral and enteral antimicrobials reduces rather than increases antimicrobial resistance. Moreover, a new chapter on microcirculation had been added. The volume will be an invaluable tool for all those requiring in depth knowledge in the ever expanding field of infection control.

LABORATORY QUALITY MANAGEMENT SYSTEM

HANDBOOK

Achieving, maintaining and improving accuracy, timeliness and reliability are major challenges for health laboratories. Countries worldwide committed themselves to build national capacities for the detection of, and response to, public health events of international concern when they decided to engage in the International Health Regulations implementation process. Only sound management of quality in health laboratories will enable countries to produce test results that the international community will trust in cases of international emergency. This handbook was developed through collaboration between the WHO Lyon Office for National Epidemic Preparedness and Response, the United States of America Centers for Disease Control and Prevention (CDC) Division of Laboratory Systems, and the Clinical and Laboratory Standards Institute (CLSI). It is based on training sessions and modules provided by the CDC and WHO in more than 25 countries, and on guidelines for implementation of ISO 15189 in diagnostic laboratories, developed by CLSI. This handbook is intended to provide a comprehensive reference on Laboratory Quality Management System for all stakeholders in health laboratory processes, from management, to administration, to bench-work laboratorians. This handbook covers topics that are essential for quality management of a public health or clinical laboratory. They are based on both ISO 15189 and CLSI GP26-A3 documents. Each topic is discussed in a separate chapter. The chapters follow the framework developed by CLSI and are organized as the "12 Quality System Essentials".

WHO GUIDELINES ON HAND HYGIENE IN HEALTH CARE

FIRST GLOBAL PATIENT SAFETY CHALLENGE : CLEAN CARE IS SAFER CARE

World Health Organization The WHO Guidelines on Hand Hygiene in Health Care provide health-care workers (HCWs), hospital administrators and health authorities with a thorough review of evidence on hand hygiene in health care and specific recommendations to improve practices and reduce transmission of pathogenic microorganisms to patients and HCWs. The present Guidelines are intended to be implemented in any situation in which health care is delivered either to a patient or to a specific group in a population. Therefore, this concept applies to all settings where health care is permanently or occasionally performed, such as home care by birth attendants. Definitions of health-care settings are proposed in Appendix 1. These Guidelines and the associated WHO Multimodal Hand Hygiene Improvement Strategy and an Implementation Toolkit (<http://www.who.int/gpsc/en/>) are designed to offer health-care facilities in Member States a conceptual framework and practical tools for the application of recommendations in practice at the bedside. While ensuring consistency with the Guidelines recommendations, individual adaptation according to local regulations, settings, needs, and resources is desirable. This extensive review includes in one document sufficient technical information to support training materials and help plan implementation strategies. The document comprises six parts.

BASICS OF RADIOPHARMACY

GUIDELINES ON CORE COMPONENTS OF INFECTION PREVENTION AND CONTROL PROGRAMMES AT THE NATIONAL AND ACUTE HEALTH CARE FACILITY LEVEL

Health care-associated infections (HAI) are one of the most common adverse events in care delivery and a major public health problem with an impact on morbidity, mortality and quality of life. At any one time, up to 7% of patients in developed and 10% in developing countries will acquire at least one HAI. These infections also present a significant economic burden at the societal level. However, a large percentage are preventable through effective infection prevention and control (IPC) measures. These new guidelines on the core components of IPC programmes at the national and facility level will enhance the capacity of Member States to develop and implement effective technical and behaviour modifying interventions. They form a key part of WHO strategies to prevent current and future

threats from infectious diseases such as Ebola, strengthen health service resilience, help combat antimicrobial resistance (AMR) and improve the overall quality of health care delivery. They are also intended to support countries in the development of their own national protocols for IPC and AMR action plans and to support health care facilities as they develop or strengthen their own approaches to IPC. These are the first international evidence-based guidelines on the core components of IPC programmes. These new WHO guidelines are applicable for any country and suitable to local adaptations, and take account of the strength of available scientific evidence, the cost and resource implications, and patient values and preferences.
