THE FIVE THINGS WE CANNOT CHANGE

AND THE HAPPINESS WE FIND BY EMBRACING THEM

Shambhala Publications **Why is it that despite our best efforts, many of us remain fundamentally unhappy and unfulfilled in our lives? In this provocative and inspiring book, David Richo distills thirty years of experience as a therapist to explain the underlying roots of unhappiness—and the surprising secret to finding freedom and fulfillment. There are certain facts of life that we cannot change—the unavoidable "givens" of human existence: (1) everything changes and ends, (2) things do not always go according to plan, (3) life is not always fair, (4) pain is a part of life, and (5) people are not loving and loyal all the time. Richo shows us that by dropping our deep-seated resistance to these givens, we can find liberation and discover the true richness that life has to offer. Blending Western psychology and Eastern spirituality, including practical exercises, Richo shows us how to open up to our lives—including to what is frightening, painful, or disappointing—and discover our greatest gifts.**

ARCHITECTURALLY EXPOSED STRUCTURAL STEEL

SPECIFICATIONS, CONNECTIONS, DETAILS

Birkhäuser This book provides the means for a better control and purposeful consideration of the design of Architecturally Exposed Structural Steel (AESS). It deploys a detailed categorization of AESS and its uses according to design context, building typology and visual exposure. In a rare combination, this approach makes high quality benchmarks compatible with economies in terms of material use, fabrication methods, workforce and cost. Building with exposed steel has become more and more popular worldwide, also as advances in fire safety technology have permitted its use for building tasks under stringent fire regulations. On her background of long standing as a teacher in architectural steel design affiliated with many institutions, the author ranks among the world's best scholars on this

topic. Among the fields covered by the extensive approach of this book are the characteristics of the various categories of AESS, the interrelatedness of design, fabrication and erection of the steel structures, issues of coating and protection (including corrosion and fire protection), special materials like weathering steel and stainless steel, the member choices and a connection design checklist. The description draws on many international examples from advanced contemporary architecture, all visited and photographed by the author, among which figure buildings like the Amgen Helix Bridge in Seattle, the Shard Observation Level in London, the New York Times Building and the Arganquela Footbridge.
