SOUL OF INK: LIM TZE PENG AT 100

World Scientific Soul of Ink: Lim Tze Peng at 100 pays tribute to the remarkable achievement of artistic renaissance at 100. It traces the lean beginnings of Lim Tze Peng's early years, relives the times of controversy over the artist's innovations in Chinese calligraphy, and celebrates his breakthroughs. Throughout the book, attention is paid to Lim Tze Peng the man, the foundation of everything that is admirable about Lim Tze Peng the artist. It looks at the man behind the art, and how art has given life to him and his family. Farmer, teacher, principal, and artist, Lim Tze Peng counts Lee Man Fong, Cheong Soo Pieng, and Liu Kang as his mentors. These men, like the others from the pioneering generation of Nanyang artists, are no longer around. Lim Tze Peng remains standing, a witness to and player in Singapore's art history since the 1940s. His life started late; everything got going only after the ripe old age of 80. A Cultural Medallion winner at 82 and a Meritorious Service recipient at 95, Lim Tze Peng is used to the twists and turns of life and has been trained by experience to endure the vagaries of fate. You could describe his art as the art of perseverance. The works he produces these days need to be seen to be believed. Bigger, bolder, and boasting far more colour than ever before, his art is as invigorating as that of a young man, whilst embodying the soul of a sage. At the heart of this book is the word 'soul'. What pushes a man at the age of 100 to continue breaking new ground in his life's work? How has he been able to surprise not just the art community but himself? This is Woon Tai Ho's second book on a Singaporean artist. His first, To Paint a Smile, is about the artist Tan Swie Hian.

SHADOW EDUCATION

PRIVATE SUPPLEMENTARY TUTORING AND ITS IMPLICATIONS FOR POLICY MAKERS IN ASIA

Asian Development Bank In all parts of Asia, households devote considerable expenditures to private supplementary tutoring. This tutoring may contribute to students' achievement, but it also maintains and exacerbates social inequalities, diverts resources from other uses, and can contribute to inefficiencies in education systems. Such tutoring is widely called shadow education, because it mimics school systems. As the curriculum in the school system changes, so does the shadow. This study documents the scale and nature of shadow education in different parts of the region. Shadow education has been a major phenomenon in East Asia and it has far-reaching economic and social implications.

THE ECOLOGY OF MANGROVE AND RELATED ECOSYSTEMS

PROCEEDINGS OF THE INTERNATIONAL SYMPOSIUM HELD AT MOMBASA, KENYA, 24-30 SEPTEMBER 1990

Springer Science & Business Media The mangrove, seagrass and coral reef ecosystems are of paramount ecological importance but have already undergone great degradation, which is advancing at an alarming rate. If present trends continue, the natural resource basis of the economy and ecology of tropical coastal regions will soon be ruined. This was the unanimous conclusion of the 110 scientists from 23 countries who gathered in Mombasa, Kenya, for a Symposium on the ecology of these ecosystems. Mangrove forest systems yield large amounts of fish, crabs, prawns and oysters. They are also valuable sources of fuelwood, timber, tannin and other natural products. Their non-marketable value is of equal importance: stabilization of the coastline, an indispensable nursery ground for numerous marine species with commercial value, a natural filter maintaining the clarity of nearshore water, a home for resident and migratory birds and other wildlife. Many of the true mangrove flora and fauna are now endangered by the clearing of the mangroves. It has been shown that in many countries between 25 and 100% of the mangrove forest has been destroyed already in the last twenty years. The international scientific assembly concluded that much can be done to stop the degradation of these damaged ecosystems and to rehabilitate them. But new techniques must be found to use them on a sustainable basis for long-term economic return and for the well-being of coastal human settlements and a healthy environment.
