BEHAVIORAL DENTISTRY

John Wiley & Sons Behavioral Dentistry, Second Edition, surveys the vast and absorbing topic of the role of behavioral science in the study and clinical practice of dentistry. An understanding of social sciences has long been a central part of dental education, and essential for developing a clinician's appreciation of human behavior as it affects efficient dental treatment. This book gathers together contributions from leading experts in each of the major subspecialties of behavioral dentistry. Its aim is not merely to provide the student and clinician with a comprehensive review of the impressive literature or discussion of the theoretical background to the subject, but also with a practical guide to adapting the latest techniques and protocols and applying them today-to-day clinical practice. This second edition of Behavioral Dentistry discusses biobehavioral processes, including the psychobiology of inflammation and pain, oral health and quality of life, saliva health, and hypnosis in dentistry. The book goes on to examine anxiety, fear, and dental and chronic orofacial pain, and then reviews techniques for designing and managing behavior change. It concludes with a section on professional practice, including care of special needs, geriatric, and diabetic patients,

and interpersonal communication in dental education.

PARENTING MATTERS

SUPPORTING PARENTS OF CHILDREN AGES 0-8

National Academies Press Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

A STUDY ON SEXUAL HEALTH KNOWLEDGE, SEXUAL ATTITUDES AND SEX-RELATED BEHAVIORS OF UNIVERSITY STUDENTS IN HEFEI, CHINA

Open Dissertation Press This dissertation, "A Study on Sexual Health Knowledge, Sexual Attitudes and Sex-related Behaviors of University Students in Hefei, China" by Xinli, Chi, 陈新丽, was obtained from The University of Hong Kong (Pokfulam, Hong Kong) and is being sold pursuant to Creative Commons: Attribution 3.0 Hong Kong License. Abstract: This present research aimed (1) to examine the level of sexual health knowledge, patterns of sexual attitudes and prevalence of sex-related behaviours among college students in contemporary China; (2) to explore factors predicting knowledge, attitude and behavior regarding sexuality; and (3) to assess gender differences in both characteristics and correlates. Based on data collected from 274 college students (167 male and 107 female) by the way of convenience sampling, in Hefei, China, Phase 1 of the study first selected, examined and modified (if necessary) three instruments (Sexual Health Knowledge Scale, SHKS; Sexual Attitude Scale, SAS; Sex-Related Behaviour Questionnaire, SRBQ), which was used in Phase 2 of the Study. It was found that the examined and (if necessary) modified SHKS, SAS and SRBQ showed good psychometric properties and internal consistencies, which could be useful questionnaires for the measurement of Chinese college students' sexuality regarding knowledge, attitude and behaviour. Phase 2 of the Study including Section 1, 2 and 3 explored characteristics and correlates of sexual health knowledge, sexual attitudes and sex-related behaviors among an convenience sample of 1398 college students (828 male and 570 female) in Hefei, China. The results in Section 1 demonstrated college students had very limited sexual health knowledge and boys were likely to be much more knowledgeable than girls. Subscales and global score of sexual health knowledge correlated with received sexuality education, romantic relationship experience and coming from urban area, but the overall impact of the factors studied was not strong. The results in Section 2 indicated males had neutral attitudes about sexuality and females had relatively conservative attitudes. Although the overall impact of the factors studied was not strong, several variables (i.e., relationship experience, time spent online, parents' education, family income, urbanity and sexual health knowledge,) were statistically significantly associated with subscales and global score of sexual attitude. Age was a positive predictor of permissiveness for males and a negative predictor for females. It was found in Section 3 that specific sex-related behaviours in the last one year varied in frequency. Prevalence of some sex-related behaviors (i.e., heterosexual intercourse, oral sex) remained low, while

prevalence of other sexual behaviours (i.e., masturbation, pornography use) was high. The magnitude of gender differences in some sex-related behaviors (i.e., oral sex) was relatively small while there was the big gender gap in other sexual behaviours (i.e., masturbation). Moreover, students who had romantic relationship experience, lower educational aspiration or had received sexuality education reported more sexual behaviors involvement. Interestingly, males, but not females, were significantly influenced by time spent online. The thesis suggested significance at theoretical, empirical and practical level, limitations (i.e., gender-related reporting bias, limitation of generalization) and possible directions (i.e., safe sex, sexual and gender monitories, qualitative, cross-cultural and longitudinal study) for future research by reflecting on the findings of this research. Finally, the research was evaluated in terms of practical implications for sexuality education an

CURRENT AWARENESS IN HEALTH EDUCATION

ADVANCING ORAL HEALTH IN AMERICA

National Academies Press Though it is highly preventable, tooth decay is a common chronic disease both in the United States and worldwide. Evidence shows that decay and other oral diseases may be associated with adverse pregnancy outcomes, respiratory disease, cardiovascular disease, and diabetes. However, individuals and many health care professionals remain unaware of the risk factors and preventive approaches for many oral diseases. They do not fully appreciate how oral health affects overall health and well-being. In Advancing Oral Health in America, the Institute of Medicine (IOM) highlights the vital role that the Department of Health and Human Services (HHS) can play in improving oral health and oral health care in the United States. The IOM recommends that HHS design an oral health initiative which has clearly articulated goals, is coordinated effectively, adequately funded and has high-level accountability. In addition, the IOM stresses three key areas needed for successfully maintaining oral health as a priority issue: strong leadership, sustained interest, and the involvement of multiple stakeholders from both the public and private sectors.

Advancing Oral Health in America provides practical recommendations that the Department of Health and Human Services can use to improve oral health care in America. The report will serve as a vital resource for federal health agencies, health care professionals, policy makers, researchers, and public and private health organizations.
