### EX POST EVALUATION OF COMPETITION CASES

---

Kluwer Law International B.V. Competition authorities use ex post evaluation of enforcement decisions to help determine if an intervention (or non-intervention) has achieved its objectives – and, if not, the reasons it failed to do so – thus allowing for improvement in the design and use of techniques used in the analysis underpinning the decision. In this essential volume, expert contributors use this procedure to provide a neutral and extensive assessment of cases that have significantly shaped European Union (EU) competition law enforcement. With in-depth analysis of foundational cases of EU competition law and the methodologies that have been developed over time to predict how enforcement decisions will affect competition, for each case the authors respond thoroughly to such questions as the following: Did the decision have an impact on the affected market? Did it improve consumer or social welfare? With the benefit of hindsight, were the factual assertions true? Were all the relevant theories of harm (and efficiency justifications) properly investigated? Was the decision able to deter similar anticompetitive behaviour? Did the decision provide clear guidance on which types of conduct should be deemed illegal? Industries covered include information technology (the Microsoft cases), payment cards (the Visa Europe 2010 Commitments Decision), pharmaceuticals, and conditional rebates (Michelin I, Michelin II and BA/Virgin). Also investigated are the role of buyer power in concentration cases and the relative strength of competition law enforcement versus regulation, where appropriate. In its accumulation of evidence from individual cases that have gradually improved our ability to grasp the connections between policy choices and the outcomes they lead to, this matchless volume has no peers. It constitutes an invaluable resource for competition authorities in performing ex post evaluations and will be welcomed by practitioners and academics concerned with European competition law.

### MARKET DEFINITION AND MARKET POWER IN THE PLATFORM ECONOMY

---

Centre on Regulation in Europe asbl (CERRE) With the rise of digital platforms and the natural tendency of markets involving platforms to become concentrated, competition authorities and courts are more frequently in a position to investigate and decide merger and abuse cases that involve platforms. This report provides guidance on how to define markets and on how to assess market power when dealing with two-sided platforms. DEFINITION Competition authorities and courts are well advised to uniformly use a multi-markets approach when defining markets in the context of two-sided platforms. The multi-markets approach is the more flexible instrument compared to the competing single-market approach that defines a single market for both sides of a platform, as the former naturally accounts for different substitution possibilities by the user groups on the two sides of the platform. While one might think of conditions under which a single-market approach could be feasible, the necessary conditions are so severe that it would only be applicable under rare circumstances. To fully appreciate business activities in platform markets from a competition law point of view, and to do justice to competition law's purpose, which is to protect consumer welfare, the legal concept of a "market" should not be interpreted as requiring a price to be paid by one party to the other. It is not sufficient to consider the activities on the "unpaid side" of the platform only indirectly by way of including them in the competition law analysis of the "paid side" of the platform. Such an approach would exclude certain activities and ensuing positive or negative effects on consumer welfare altogether from the radar of competition law. Instead, competition practice should recognize straightforwardly that there can be "markets" for products offered free of charge, i.e. without monetary consideration by those who receive the product. ASSESSMENT The application of competition law often requires an assessment of market power. Using market shares as indicators of market power, in addition to all the difficulties in standard markets, raises further issues for two-sided platforms. When calculating revenue shares, the only reasonable option is to use the sum of revenues on all sides of the platform. Then, such shares should not be interpreted as market shares as they are aggregated over two interdependent markets. Large revenue shares appear to be a meaningful indicator of market power if all undertakings under consideration serve the same sides. However, they are often not meaningful if undertakings active in the relevant markets follow different business models. Given potentially strong cross-group external effects, market shares are less apt in the context of two-sided platforms to indicate market power (or the lack of it). Barriers to entry are at the core of persistent market power and, thus, the entrenchment of incumbent platforms. They deserve careful examination by competition authorities. Barriers to entry may arise due to users' coordination failure in the presence of network effect. On two-sided platforms, users on both sides of the market have to coordinate their expectations. Barriers to entry are more likely to be present if an industry does not attract new users and if it does not undergo major technological change. Switching costs and network effects may go hand in hand: consumer switching costs sometimes depend on the number of platform users and, in this case, barriers to entry from consumer switching costs increase with platform size. Since market power is related to barriers to entry, the absence of entry attempts may be seen as an indication of market power. However, entry threats may arise from firms offering quite different services, as long as they provide a new home for users' attention and needs.

---

Springer Science & Business Media The Workshop on the Economics of Information Security (WEIS) is the leading forum for interdisciplinary scholarship on information security, combining expertise from the fields of economics, social science, business, law, policy and computer science. Prior workshops have explored the role of incentives between attackers and defenders, identified market failures dogging Internet security, and assessed investments in cyber-defense. Current contributions build on past efforts using empirical and analytic tools to not only understand threats, but also strengthen security through novel evaluations of available solutions. Economics of Information Security and Privacy III addresses the following questions: how should information risk be modeled given the constraints of rare incidence and high interdependence; how do individuals' and organizations' perceptions of privacy and security color their decision making; how can we move towards a more secure information infrastructure and code base while accounting for the incentives of stakeholders?

## **INTERCHANGE FEE ECONOMICS**

### **TO REGULATE OR NOT TO REGULATE?**

Springer Interchange fees have been the focal point for debate in the card industry, among competition authorities and policy makers, as well as in the economic literature on two-sided markets and on the regulation of market failures. This book offers insight into the economics of interchange fees. First, it explains the nature of two-sided markets/platforms/networks and elaborates on four-party schemes and on the rationale behind interchange fees according to Baxter's model and its later refinements. It also includes the debate about the optimum level of interchange fees and its determination ("tourist test"), and presents the original framework for assessing the impact of interchange fee regulatory reductions for the market participants: consumers, merchants, acquirers, issuers, and card organisations. The framework addresses three areas of concern in reference to the transmission channels of interchange fee reductions (pass-through) and the card scheme domain (triangle: payment organisation, issuer, acquirer). The book discusses the effects of regulatory interchange fee reductions in Australia, USA, Spain, and, most specifically, Poland. It will be of interest to policy makers, card and payments industry practitioners, academics, and students.
