### Journey of Hope...

**Xlibris Corporation** *The savage murder of 78-year-old Bible teacher Ruth Pelke by four teen-age girls was the beginning of Bill Pelkes Journey of Hope...From Violence to Healing. Initially Bill did not object when 15-year old Paula Cooper was sentenced to death for his grandmothers murder. Through the power of prayer and transformation, he moved from supporting her death sentence, to working to have it overturned, to dedicating his life to the abolition of the death penalty. This is the story of Bills journey, the obstacles he overcame, and the amazing, loving, forgiving, committed people he met on the way.*

### Science by Women

### Stories From Careers in STEM

**Springer Nature** *This book provides a roadmap for those embarking on a career in STEM, whether in the research or industry realms. Focusing on paths taken by women, the contributors lend their stories, tips and tricks, and hardships they faced entering into fields historically dominated by men. The authors provide practical advice, highlighting soft skills that are not often taught as modules in the classroom. Topics include research collaborations, performance enhancement, the gender lens in research design and development, imposter syndrome felt by many women in science, ethics in science, scaling feminine leadership, being an influencer as a science leader, and time and resources optimization for career advancement in science from resource-poor settings. Others interested in science and its impacts on society will also find the book informative and timely. As an important part of the Organization for Women in Science in the Developing World (OWSD), University of Port Harcourt Branch Book project, the work hopes to inspire women and men, girls and boys to enter and apply themselves to secure the future in STEM.*

## Molecular Biology of Food and Water Borne Mycotoxigenic and Mycotic Fungi

**CRC Press** *A part of the Food Microbiology Series, Molecular Biology of Food and Water Borne Mycotoxigenic and Mycotic Fungi reveals similarities between fungi present in/on food and water and those that cause human fungal diseases. The book covers food borne mycotoxigenic fungi in depth and examines food borne fungi from the standpoint of mycoses (i.e. funga*

## Telomeres and Telomerase

**S Karger Ag** *Telomeres are essential functional elements of eukaryotic chromosomes. Their fundamental biological role as protectors of chromosome stability was identified for the first time in the 1930s by Hermann Muller and Barbara McClintock based on pioneering cytological experiments. Modern molecular research carried out more recently revealed that telomeres and telomerase play important roles in processes such as carcinogenesis and cellular senescence. This special issue presents the most recent developments in this highly active field of research. It is becoming increasingly clear that molecular pathways involved in regulation of*

telomere length and structure are functionally linked with pathways involved in DNA damage response, cellular stress response, chromatin organization and perhaps even pathways that regulate evolutionary chromosome rearrangements. The above functional link is explored by the leading experts in the field of telomere biology. Cell biologists, molecular biologists, oncologists, gerontologists, and radiobiologists with an interest in the role of telomeres/telomerase will appreciate the up-to-date information in this publication.

## Why Should I Save Water?

**Turtleback** Children learn that clean water is one of our most precious natural resources. In this book, boys and girls are told about dozens of ways in which they and their families can avoid wasting water. Part of every child's development involves asking questions. Today, some of the most important questions kids ask are related to the natural environment. The enlightening and entertaining four-book *Why Should I?* series demonstrates the importance of protecting nature. Books present brief, entertaining stories that answer children's questions and feature amusing color illustrations on every page. A note at the back of each book is for parents and teachers, suggesting ways to use these books most effectively.

## Teaching with Classroom Response Systems

## Creating Active Learning Environments

**John Wiley & Sons** There is a need in the higher education arena for a book that responds to the need for using technology in a classroom of tech-savvy students. This book is filled with illustrative examples of questions and teaching activities that use classroom response systems from a variety of disciplines (with a discipline index). The book also incorporates results from research on the effectiveness of the technology for teaching. Written for instructional designers and re-designers as well as faculty across disciplines. A must-read for anyone interested in interactive teaching and the use of clickers. This book draws on the experiences of countless instructors across a wide range of disciplines to provide both novice and experienced teachers with practical advice on how to make classes more fun and more effective."--Eric Mazur, Balkanski Professor of Physics and Applied Physics, Harvard University, and author, *Peer Instruction: A User's Manual* "Those who come to this book needing practical advice on using 'clickers' in the classroom will be richly rewarded: with case studies, a refreshing historical perspective, and much pedagogical ingenuity. Those who seek a deep, thoughtful examination of strategies for active learning will find that here as well—in abundance. Dr. Bruff achieves a marvelous synthesis of the pragmatic and the philosophical that will be useful far

## The Principles of Physical Optics

### An Historical and Philosophical Treatment

**Courier Corporation** *The famous physicist explains early experiments, studies on polarization, the mathematical representation of the properties of light, and refinements and advances in theory. 279 figures. 10 portraits. 1926 edition.*

### History of the Principle of Interference of Light

**Birkhäuser** *The controversy between the wave theory and the emission theory of light early in the nineteenth century has been a subject of numerous studies. Yet many issues remain unclear, in particular, the reasons for rejecting Young's theory of light. It appears that further progress in the field requires a better grasp of the overall situation in optics and related subjects at the time and a more thorough study of every factor suggested to be of importance for the dispute. This book is intended to be a step in this direction. It examines the impact of the concept of interference of light on the development of the early nineteenth century optics in*

*general, and the theory of light, in particular. This is not a history of the wave theory of light, nor is it a history of the debate on the nature of light in general: it covers only that part of the controversy which involved the concept of interference. Although the book deals with a number of scientists, scientific institutions, and journals, its main character is a scientific concept, the principle of interference. While discussing the reasons for accepting or rejecting this concept I have primarily focused on scientific factors, although in some cases the human factor is examined as well. The book is a revised Ph. D. dissertation (University of Minnesota, 1984) written under Alan E. Shapiro.*
