## Classic Oliver Tractors

**James Oliver sold his first "chilled" plow in 1870--"chilled" because the cast iron was cooled quickly with water to harden the metal and strengthen the plow. And when Oliver Chilled Plow Works merged with the Hart-Parr Company in 1929, the might of capital, expertise, and engineering resources came together to create one of the most successful and revered small tractor manufacturers of all time. This book follows the Oliver tractor from its inception through its development over the years, until the last model rolled off the assembly**

line in 1976. A story of entrepreneurship and industry, of machinery and American know-how, this illustrated history captures the spirit of Oliver farm equipment as its tractors and crawlers, hay balers and threshers turned American farmland to gold. Throughout, brilliant color photographs and historical images bring the story of the Oliver tractor vividly and vibrantly to life.

Nursing Education and Digital Health Strategies

*HIMSS Book Series* **Nursing and Informatics for the 21st Century Series** is a critical resource in chronicling the huge historical shift in nursing linked to the explosion of EHR national and international strategies and health policies around the globe. Each book in the series examines the revolution that has occurred in nursing and explores the role IT continues to play in this transformation, with a thoughtful examination of nursing practice, science and research, and education. This book, **Nursing Education and Digital Health Strategies** explores the current state of health and healthcare education, as well as the current state of nursing informatics education. These topics include technologies-enabled education for all nurses and interprofessional collaborations from a worldwide perspective. The "New" learning for applied critical thinking will include technology, content, skills versus tools, and

the use of "smart" systems for care delivery, the role of critical thinking and uniqueness of nursing care delivery. Further, how these changes are understood as a paradigm shift that needs to be incorporated along with nursing and healthcare education is emphasized. The effects of technology on human behavior are also explored, addressing human-factors interaction, interdependence of human computer interaction and other effects of technology on wellbeing. As part of nursing education, learning from clients/patients to better shape and advance nursing education and scholarship are discussed. Academic-clinical practice partnerships for a digital future, how teams are working together (clinician/teacher) for better healthcare delivery and applied knowledge, including joint appointments (exchange of academia and applied expertise), academic-applied human resources, and interprofessional learning/development are discussed. The book closes by discussing and using case studies to showcase nursing competencies for the next decade, and implications for preparing the healthcare workforce for a digital world, faculty readiness and the interaction with gaming and simulations. Nursing informatics education, including continuing education beyond academia, i.e., informal education, worldwide is described as well as global challenges to support digital world capabilities. Hands-on Experiential Delivery (shifting from lecture-based delivery) - case studies learning-based exemplars are included.

## The Emperor's New Hydrogen Economy

Cheap and abundant energy is the lifeblood of modern industrialized society. However, the era of cheap oil and natural gas is drawing to a close, increasing the costs (higher prices) and risks (e.g., BP Gulf of Mexico oil catastrophe) associated with our dependence on petroleum products. Increased costs and risks associated with pollution and climate change resulting from our profligate use of fossil fuels are also becoming increasingly evident. As a result, we are looking for silver bullet solutions to this array of issues, including the hydrogen economy. The Emperor's New Hydrogen Economy unmask the fairy tale underlying the so-called hydrogen economy and other pretenders to the throne of cheap, sustainable, environmentally benign and portable energy sources. However, the author does not see doom and gloom ahead. Instead, based on his research and first-hand experience, Darryl McMahon provides a surprisingly readable guide for the consumer as to how they can utilize efficiency, conservation, solar energy, biofuels and a mix of creativity and ingenuity to prepare themselves for increasingly expensive conventional energy (gasoline, diesel, natural gas, heating oil, electricity) that are coming soon, while maintaining or improving their quality of life. This book will likely be the best investment you will ever make regarding your energy-related costs.
