RESILIENCE IN ENERGY, INFRASTRUCTURE, AND NATURAL RESOURCES LAW

EXAMINING LEGAL PATHWAYS FOR SUSTAINABILITY IN TIMES OF DISRUPTION

Oxford University Press The number of severe and sometimes catastrophic disruptive events has been rapidly increasing. Extreme weather events including floods, wildfires, hurricanes, and other natural disasters have become both more frequent and more severe, whilst events such as the COVID-19 pandemic represent a global threat to public health with huge economic effects that recovery packages tried to address. These disruptive events, alone and in combination, have dramatic consequences on nature, human life, and the economy, calling for urgent action to mitigate their causes and adapt to their impacts. In response to discourses of collapsology and end-of-growth theories, this monograph offers an analytical approach to developing legal responses that can help ensure the needs of present and future generations can be met through energy systems, infrastructure development, and natural resources management in these times of disruption. 'Resilience' is, therefore, seen as a common framework for the interpretation and development of energy, infrastructure, and natural resources law. With a mix of thematic chapters and case studies from multiple jurisdictions, Resilience in Energy, Infrastructure, and Natural Resources Law maps and assesses legal responses to disruptive nature-based events, and examines possible legal pathways for more sustainable outcomes, based on its engagement with this concept of 'resilience' and social-ecological thinking.

AN INTRODUCTION TO PHYSICAL SCIENCE

NATURAL RESOURCE GOVERNANCE IN ASIA

FROM COLLECTIVE ACTION TO RESILIENCE THINKING

Elsevier *Natural Resource Governance in Asia: From Collective Action to Resilience Thinking* identifies key leverage points where interventions can be made surrounding current and future impacts of ongoing environmental and sociopolitical challenges. The book utilizes case studies from Asia, a key demographic for natural resource management, that can be applied globally in understanding solutions and the current state of knowledge in natural resource dynamics. Users will find valuable sections on community forestry and socioecological systems, community irrigation, competing water demand, robustness issues, climate change, and natural resource dynamics and challenges. This interdisciplinary tome on the topic is invaluable to researchers and policymakers alike. Combines collective action and resilience thinking to help readers understand complex issues and challenges in natural resource management Presents methods and case studies to validate theory in practice Includes up-to-date research applied to current issues to address both current and future risks and uncertainties

MOON

PROSPECTIVE ENERGY AND MATERIAL RESOURCES

Springer Science & Business Media The Earth has limited material and energy resources. Further development of the humanity will require going beyond our planet for mining and use of extraterrestrial mineral resources and search of power sources. The exploitation of the natural resources of the Moon is a first natural step on this direction. Lunar materials may contribute to the betterment of conditions of people on Earth but they also may be used to establish permanent settlements on the Moon. This will allow developing new technologies, systems and flight operation techniques to continue space exploration. In fact, a new branch of human civilization could be established permanently on Moon in the next century. But, meantime, an inventory and proper social assessment of Moon's prospective energy and material resources is required. This book investigates the possibilities and limitations of various systems supplying manned bases on Moon with energy and other vital resources. The book collects together recent proposals and innovative options and solutions. It is a useful source of condensed information for specialists involved in current and impending Moon-related activities and a good starting point for young researchers.

ECONOMICS PRIVATE AND PUBLIC CHOICE

Elsevier Economics: Private and Public Choice is an aid for students and general readers to develop a sound economic reasoning. The book discusses several ways to economic thinking including six guideposts as follows: (i) scarce goods have costs; (ii) Decision-makers economize in their choices; (iii) Incentives are important; (iv) Decision-makers are dependent on information scarcity; (v) Economic actions can have secondary effects; and (vi) Economic thinking is scientific. The book explains the Keynesian view of money, employment, and inflation, as well as the monetarist view on the proper macropolicy, business cycle, and inflation. The book also discusses consumer decision making, the elasticity of demand, and how income influences demand. The text analyzes costs and producer decisions, the firm under pure competition, and how a competitive model functions. The book explains monopoly, and also considers the high barriers that prevent entry such as legal barriers, economies of scale, and control over important resources. The author also presents comparative economic systems such as capitalism and socialism. This book can prove useful for students and professors in economics, as well as general readers whose works are related to public service and planning in the area of economic development.

23 YEARS CAT TOPIC-WISE SOLVED PAPERS (1994-2016) WITH 6 ONLINE PRACTICE SETS 10TH EDITION

Disha Publications This title contains an Access Code along with instructions to access the Online Material. 23 years CAT Topic-wise Solved Papers (1994-2016) with 6 Online Practice Sets 10th edition is the thoroughly revised & enlarged edition. The book consists of past years solved papers of CAT from 1994 to 2016 distributed into 3 Units, which are further divided into 24 topics. The book contains more than 3000+ Milestone Problems for CAT with 1400+ in Quantitative Aptitude & Data Interpretation Unit (15 Topics) and 1600+ in Verbal Ability & Logical Reasoning Unit (9 Topics). The book provides detailed solutions to each and every question. Alternative solutions are provided at various places. The focus of the book is to provide shortcuts and techniques which are a must to Crack CAT. Finally the book provides 6 Online tests - 3 sectional and 3 Full Practice Sets based on the latest pattern with Solutions.

SOUTHERN FOREST SCIENCE

PAST, PRESENT, AND FUTURE

"Southern forests provide innumerable benefits. Forest scientists, managers, owners, and users have in common the desire to improve the condition of these forests and the ecosystems they support. A first step is to understand the contributions science has made and continues to make to the care and management of forests. This book represents a celebration of past accomplishments, summarizes the current state of knowledge, and creates a vision for the future of southern forestry research and management. Chapters are organized into seven sections: "Looking Back," "Productivity," "Forest Health," "Water and Soils," "Socioeconomic," "Biodiversity," and "Climate Change." Each section is preceded by a brief introductory chapter. Authors were encouraged to focus on the most important aspects of their topics; citations are included to guide readers to further information."

LIVING IN THE ENVIRONMENT: PRINCIPLES, CONNECTIONS, AND SOLUTIONS

Cengage Learning Sustainability is the integrating theme of this current and thought-provoking book. *LIVING IN THE ENVIRONMENT* provides the basic scientific tools for understanding and thinking critically about the environment. Co-authors G. Tyler Miller and Scott Spoolman inspire students to take a positive approach toward finding and implementing useful environmental solutions in their own lives and in their careers. Updated with the most up-to-date information, art, and Good News examples, the text engages and motivates students with vivid case studies and hands-on quantitative exercises. The concept-centered approach transforms

complex environmental topics and issues into key concepts that students will understand and remember. Overall, by framing the concepts with goals for more sustainable lifestyles and human communities, students see how promising the future can be. FIRE IN CALIFORNIA'S ECOSYSTEMS

Univ of California Press *Fire in California's Ecosystems* describes fire in detail—both as an integral natural process in the California landscape and as a growing threat to urban and suburban developments in the state. Written by many of the foremost authorities on the subject, this comprehensive volume is an ideal authoritative reference tool and the foremost synthesis of knowledge on the science, ecology, and management of fire in California. Part One introduces the basics of fire ecology, including overviews of historical fires, vegetation, climate, weather, fire as a physical and ecological process, and fire regimes, and reviews the interactions between fire and the physical, plant, and animal components of the environment. Part Two explores the history and ecology of fire in each of California's nine bioregions. Part Three examines fire management in California during Native American and post-Euro-American settlement and also current issues related to fire policy such as fuel management, watershed management, air quality, invasive plant species, at-risk species, climate change, social dynamics, and the future of fire management. This edition includes critical scientific and management updates and four new chapters on fire weather, fire regimes, climate change, and social dynamics.

NEW TRENDS IN REMOVAL OF HEAVY METALS FROM INDUSTRIAL WASTEWATER

Elsevier *New Trends in Removal of Heavy Metals from Industrial Wastewater* covers the applicable technologies relating to the removal of heavy metals from wastewater

and new and emerging trends in the field, both at the laboratory and industrial scale. Sections explore new environmentally friendly technologies, the principles of sustainable development, the main factors contributing to heavy metal removal from wastewater, methods and procedures, materials (especially low-cost materials originated from industrial and agricultural waste), management of wastewater containing heavy metals and wastewater valorization, recycling, environmental impact, and wastewater policies for post heavy metal removal. This book is an advanced and updated vision of existing heavy metal removal technologies with their limitations and challenges and their potential application to remove heavy metals/environmental pollutants through advancements in bioremediation. Finally, sections also cover new trends and advances in environmental bioremediation with recent developments in this field by an application of chemical/biochemical and environmental biotechnology. Outlines the fate and occurrence of heavy metals in Wastewater Treatment Plants (WWTPs) and potential approaches for their removal Describes the techniques currently available for removing heavy metals from wastewater Discusses the emerging technologies in heavy metal removal Covers biological treatments to remove heavy metals Includes the valorization of heavy metal containing wastewater

MONOMERS, POLYMERS AND COMPOSITES FROM RENEWABLE RESOURCES

Elsevier The progressive dwindling of fossil resources, coupled with the drastic increase in oil prices, have sparked a feverish activity in search of alternatives based on renewable resources for the production of energy. Given the predominance of petroleum- and carbon-based chemistry for the manufacture of organic chemical commodities, a similar preoccupation has recently generated numerous initiatives aimed at replacing these fossil sources with renewable counterparts. In particular, major efforts are being conducted in the field of polymer science and technology to prepare macromolecular materials based on renewable resources. The concept of the bio-refinery, viz. the rational exploitation of the vegetable biomass in terms of the separation of its components and their utilisation as such, or after suitable chemical modifications, is thus gaining momentum and considerable financial backing from both the public and private sectors. This collection of chapters, each one written by internationally recognised experts in the corresponding field, covers in a comprehensive fashion all the major aspects related to the synthesis, characterization and properties of macromolecular materials prepared using renewable resources as such, or after appropriate modifications. Thus, monomers such as terpenes and furans, oligomers like rosin and tannins, and polymers ranging from cellulose to proteins and including macromolecules synthesized by microbes, are discussed with the purpose of showing the extraordinary variety of materials that can be prepared from their intelligent exploitation. Particular emphasis has been placed on recent advances and imminent perspectives, given the incessantly growing interest that this area is experiencing in both the scientific and technological realms. Discusses bio-refining with explicit application to materials Replete with examples of applications of the concept of sustainable development Presents an

impressive variety of novel macromolecular materials

EDUCATING SCIENCE TEACHERS FOR SUSTAINABILITY

Springer This volume contains a unique compilation of research and reflections representing multiple vantage points stemming from different parts of the world that can help science educators and teacher educators in finding ways to meaningfully and purposefully embed sustainability into teaching and learning. It is a rich resource for exploring and contextualizing sustainability-oriented science education. At this time we find ourselves in a situation in which the earth's ecological system is under significant strain as a result of human activity. In the developed world people are asking "How can we maintain our current standard of living?" while those in the developing world are asking "How can we increase the quality of our lives?" all while trying to do what is necessary to mitigate the environmental problems. This volume responds to these questions with a focus on educating for sustainability, including historical and philosophical analyses, and pedagogical and practical applications in the context of science teacher preparation. Included are many examples of ways to educate science teachers for sustainability from authors across the globe. This text argues that issues of sustainability are increasingly important to our natural world, built world, national and international economics and of course the political world. The ideas presented in the book provide examples for original, effective and necessary changes for envisioning educating science teachers for sustainability that will inform policy makers.

SEAGRASSES: BIOLOGY, ECOLOGY AND CONSERVATION

Springer Science & Business Media Seagrasses are unique plants; the only group of flowering plants to recolonise the sea. They occur on every continental margin, except Antarctica, and form ecosystems which have important roles in fisheries, fish nursery grounds, prawn fisheries, habitat diversity and sediment stabilisation. Over the last two decades there has been an explosion of research and information on all aspects of seagrass biology. However the compilation of all this work into one book has not been attempted previously. In this book experts in 26 areas of seagrass biology present their work in chapters which are state-of-the-art and designed to be useful to students and researchers alike. The book not only focuses on what has been discovered but what exciting areas are left to discover. The book is divided into sections on taxonomy, anatomy, reproduction, ecology, physiology, fisheries, management, conservation and landscape ecology. It is destined to become the chosen text on seagrasses for any marine biology course.

CLIMATE AND LAND DEGRADATION

Springer Science & Business Media In many parts of the world, climatic variations are recognized as one of the major factors contributing to land degradation impacting on

agricultural systems performance and management. To accurately assess sustainable land management practices, the climate resources and the risk of climate-related or induced natural disasters in a region must be known. Only when climate resources are paired with management or development practices can the land degradation potential be assessed and appropriate mitigation technologies be developed. This book is based on an International Workshop held in Arusha, Tanzania and should be of interest to all organizations and agencies interested in sustainable land management to arrest land degradation.

STRESS IN THE MODERN WORLD: UNDERSTANDING SCIENCE AND SOCIETY [2 VOLUMES]

ABC-CLIO An engaging exploration of the scientific theories and medical conditions relating to stress and an examination of case studies that suggest ways to manage, reduce, and prevent stress in everyday life. • Examines the impact of stress on both physical and psychological health and from both theoretical and practical perspectives • Provides broad, detailed coverage that explains what stress is, the effects of stress, and effective—and ineffective—methods of coping with or reducing stress • Includes personal accounts from individuals who explain how a specific coping strategy worked for them, thereby providing suggestions of how readers may be able to improve the quality of their own lives
