### **PRECALCULUS**

---

Precalculus is adaptable and designed to fit the needs of a variety of precalculus courses. It is a comprehensive text that covers more ground than a typical one- or two-semester college-level precalculus course. The content is organized by clearly-defined learning objectives, and includes worked examples that demonstrate problem-solving approaches in an accessible way. Coverage and Scope Precalculus contains twelve chapters, roughly divided into three groups. Chapters 1-4 discuss various types of functions, providing a foundation for the remainder of the course. Chapter 1: Functions Chapter 2: Linear Functions Chapter 3: Polynomial and Rational Functions Chapter 4: Exponential and Logarithmic Functions Chapters 5-8 focus on Trigonometry. In Precalculus, we approach trigonometry by first introducing angles and the unit circle, as opposed to the right triangle approach more commonly used in College Algebra and Trigonometry courses. Chapter 5: Trigonometric Functions Chapter 6: Periodic Functions Chapter 7: Trigonometric Identities and Equations Chapter 8: Further Applications of Trigonometry Chapters 9-12 present some advanced Precalculus topics that build on topics introduced in chapters 1-8. Most Precalculus syllabi include some of the topics in these chapters, but few include all. Instructors can select material as needed from this group of chapters, since they are not cumulative. Chapter 9: Systems of Equations and Inequalities Chapter 10: Analytic Geometry Chapter 11: Sequences, Probability and Counting Theory Chapter 12: Introduction to Calculus

## **ALGEBRA 1 SINGLE VARIABLE LINEAR EQUATIONS WORKBOOK**

---

**DESCRIPTION** The ALGEBRA 1 SINGLE VARIABLE LINEAR EQUATIONS WORKBOOK is a resource that students can use to practice applying the properties, concepts, and computational techniques that are used to solve one-step, two-step, three-step, and multiple-step single variable linear equations. This workbook contains examples of step-by-step solutions for these types of equations as reference for students. This workbook also contains a review of the

**Commutative Properties of Addition and Multiplication, Associative Properties of Addition and Multiplication, the Additive Inverse Property, the Multiplicative Inverse Property, the Subtraction Property, the Identity Properties of Addition and Multiplication, and the Distributive Property of Multiplication. Additionally, this workbook provides examples of equations that are conditional, an identity, and a contradiction. There are step-by-step solutions for every problem in this workbook. This enables students to verify their work and solutions, and correct any mistakes. If students adhere to this process diligently, they should develop confidence in their abilities to solve the types of single variable linear equations. HOW TO USE THIS WORKBOOK As students work their way through the different types of equations in this workbook, they may find some of the equations a bit of a challenge to solve. This is intentional so students get practice in solving various complex problems. If they get stuck on a problem, they can take a quick look at the solutions for the next step in how to proceed. Then, they should go back to the problem and keep working on it until it's finished. Afterwards, they should check their work and answer. If students can do the majority of these challenging problems correctly on their own, they can feel a sense of accomplishment knowing that they solved difficult problems. Note: These problems will definitely improve their computational skills if they minimize their use of calculators. APPLICATION PROBLEMS This workbook contains a total of 147 problems. The last 37 problems are word problems; twelve which ask students to find a number under a given set of conditions. Some problems are percentage problems and distance problems. There is a pair of word problems where students are asked to convert temperature given in degrees Celsius to degrees Fahrenheit, and vice versa. There are other word problems where students have to determine how to use the information in the problem to substitute for one or multiple variables to reduce the equation to a single variable linear equation.
