### Preparing for the Psychological Consequences of Terrorism

#### A Public Health Strategy

**National Academies Press** The Oklahoma City bombing, intentional crashing of airliners on September 11, 2001, and anthrax attacks in the fall of 2001 have made Americans acutely aware of the impacts of terrorism. These events and continued threats of terrorism have raised questions about the impact on the psychological health of the nation and how well the public health infrastructure is able to meet the psychological needs that will likely result. Preparing for the Psychological Consequences of Terrorism highlights some of the critical issues in responding to the psychological needs that result from terrorism and provides possible options for intervention. The committee offers an example for a public health strategy that may serve as a base from which plans to prevent and respond to the psychological consequences of a variety of terrorism events can be formulated. The report includes recommendations for the training and education of service providers, ensuring appropriate guidelines for the protection of service providers, and developing public health surveillance for preevent, event, and postevent factors related to psychological consequences.

### A Practical Guide to Helping Individuals and Communities during Difficult Times

**Butterworth-Heinemann Community-Based Psychological First Aid: A Practical Guide to Helping Individuals and Communities during Difficult Times** presents a practical method for helping those in need in difficult times. No advanced training in psychology is needed to use it. Injuries from disasters, terrorist events, and civil unrest are not just physical. These events also cause psychological trauma that can do lasting damage. Psychological First Aid (PFA) draws on human resilience and aims to reduce stress systems and help those affected recover. It is not professional psychotherapy, and those providing this kind of aid do not need a degree to help. Gerard Jacobs has developed this community-based method of delivering PFA over 20 years and has taught it in over 30 countries. Along with the easy-to-follow method, Jacobs includes examples of how this works in action in different situations, and presents scenarios to practice. Unique in its approach of community engagement to train community members to help each other, this guide is an excellent resource for local emergency managers to engage in whole community emergency management. Presents a proven method for helping to alleviate the mental health effects of disasters, terrorist attacks, civil unrest, and other community stressors Offers a community-based model developed and taught by an international expert for over 20 years, requiring no advanced training or education in psychology to use Provides techniques that are adaptable to individual communities or cultures Outlines practices for self-care while helping others to prevent burnout Includes case studies, scenarios, and key terms to help facilitate community training

## The Psychology of Pandemics

### Preparing for the Next Global Outbreak of Infectious Disease

**Pandemics are large-scale epidemics that spread throughout the world. Virologists predict that the next pandemic could occur in the coming years, probably from some form of influenza, with potentially devastating consequences. Vaccinations, if available, and behavioral methods are vital for stemming the spread of infection. However, remarkably little attention has been devoted to the psychological factors that influence the spread of pandemic infection and the associated emotional distress and social disruption. Psychological factors are important for many reasons. They play a role in nonadherence to vaccination and hygiene programs, and play an important role in how people cope with the threat of infection and associated losses. Psychological factors are important for understanding and managing societal problems associated with pandemics, such as the spreading of excessive fear, stigmatization, and xenophobia that occur when people are threatened with infection. This book offers the first comprehensive analysis of the psychology of pandemics. It describes the psychological reactions to pandemics, including maladaptive behaviors, emotions, and defensive reactions, and reviews the psychological vulnerability factors that contribute to the spreading of disease and distress. It also considers empirically supported methods for addressing these problems, and outlines the implications for**

public health planning.

## Chemical and Biological Terrorism

## Research and Development to Improve Civilian Medical Response

**National Academies Press** The threat of domestic terrorism today looms larger than ever. Bombings at the World Trade Center and Oklahoma City's Federal Building, as well as nerve gas attacks in Japan, have made it tragically obvious that American civilians must be ready for terrorist attacks. What do we need to know to help emergency and medical personnel prepare for these attacks? **Chemical and Biological Terrorism** identifies the R&D efforts needed to implement recommendations in key areas: pre-incident intelligence, detection and identification of chemical and biological agents, protective clothing and equipment, early recognition that a population has been covertly exposed to a pathogen, mass casualty decontamination and triage, use of vaccines and pharmaceuticals, and the psychological effects of terror. Specific objectives for computer software development are also identified. The book addresses the differences between a biological and chemical attack, the distinct challenges to the military and civilian medical communities, and other broader issues. This book will be of critical interest to anyone involved in civilian preparedness for terrorist attack: planners, administrators, responders, medical professionals, public health and emergency personnel, and technology designers and engineers.

## Care of Children Exposed to the Traumatic Effects of Disaster

**American Psychiatric Pub** **Care of Children Exposed to the Traumatic Effects of Disaster** addresses the effects of disaster on children and their families, and explores the various resources that mental health practitioners and others who routinely interact with children, such as teachers, first responders, health care professionals, child care providers, child welfare professionals, and faith-based community members, can use to help them in their hour of need. The three co-authors have had extensive, and intensive, experience working with disaster victims and preparing both professionals and laypeople to intervene effectively in extreme events. Those on the front lines will find the book's practical and insightful observations, techniques, and strategies indispensable. Specifically, the book explains not only how to provide basic support services and brief interventions but how to recognize children in distress, to actively support positive coping skills, to monitor children's well-being in the aftermath of disaster and to identify those who need more intensive evaluation and intervention. Encompasses a broad range of disasters, from the "natural" (such as earthquakes, tsunamis, tornadoes, and hurricanes) to the human generated (such as wars, civil strife, ethnic conflict, and acts of terrorism). Provides a timeline of psychological responses to disaster, with its impact phase and cascade of secondary adversities in the aftermath of disaster, which establishes helpful benchmarks to those providing support. Includes numerous tables and figures that convey complex information in an intuitive, easy-to-understand way. **Care of Children Exposed to the Traumatic Effects of Disaster** emphasizes the critical importance of effective therapeutic intervention -- which restores function, enhances recovery, and creates a safe and secure environment -- and explains how to mobilize family and social supports to achieve that goal.

## Psychology of Terrorism

**Oxford University Press** During the past decade, we have witnessed a dramatic transformation in the nature and uses of terrorism. In the 70s, it was often repeated that terrorists "want a lot of people watching, not a lot of people dead"; today, it is more accurate to say that terrorists want a lot of people dead, and even more people crippled by fear and grief. A major strategic intent of modern terrorists is to use larger scale physical attacks to cause stress in the general population. These changes in terrorist strategy have made it clear that we need better psychological and social responses to terrorism and man-made disasters. The psychological science needed to provide proper and effective treatment for victims of horrendous events, such as September 11th, and future potential terrorist acts, simply does not exist, so military, medical, and psychological experts must work together to improve their understanding of mass casualty terrorism. In *Psychology of Terrorism* leading national and international experts present the first results of this effort, including the newest findings on treatment of and clinical responses to terrorism along with their respective underlying theories. They address the history of terrorism; types and effects of weapons of mass destruction or disruption; the role of the military, government agencies, and volunteer groups in responding to terrorist threats; psychological consequences of terrorism; and treatment of special populations such as children and older adults. This volume will be an ideal text for both academic and professional courses as well as a comprehensive resource for mental health clinicians and researchers, medical care providers, educators, public health specialists, government employees, police and fire departments, and non-profit agencies that provide services and craft policy.

Preparation While Waiting for Test Results of Genital Herpes

An Integrative Approach for Women to Manage the Psychological Impact and Stigma

## of a Chronic Sexually Transmitted Disease

For many individuals diagnosed with genital herpes, the psychological impact and stigma can be more of a burden than the physical symptoms (Ebel & Wald, 2002). Common emotional themes for individuals with genital herpes include feelings of self destruction, depression, anxiety, decreased self-esteem, fears of rejection, and significant psychosexual implications. Melville et al. (2003) support that knowledge prior to diagnosis for genital herpes serves to increase one's ability to cope with a positive diagnosis. Thus, the proposed program will be implemented while the individual is awaiting test results. The program will help women manage the anticipatory anxiety and allow her to accumulate knowledge about herpes prior to receiving the diagnosis. Subsequently, she will develop coping skills and prepare for the psychological impact and associated stigma. The long-term objectives of the program are to increase overall ability to cope with a positive diagnosis, decrease depressive symptomatology, decrease anxiety, and manage stigma. Women between the ages of 18 and 25 will be invited to attend the program immediately after receiving a viral lab culture for genital herpes. The first phase of the program will consist of a 90-minute session that will focus on the educational components of genital herpes. The second phase will involve another 90-minute session, in which the women learn cognitive coping strategies and behavioral skills training. A 30-minute individual follow-up session will be provided immediately after the individual is informed, in person, of the test results. If needed, the patient will be informed of additional resources for persons with genital herpes, such as HELP groups, or individual therapists. Pre- and posttest measures of depression and anxiety will be obtained upon entrance to the program and after the women are informed of their viral status. Three months following the program the women will be asked to complete a satisfaction survey as well as additional posttest measures of depression and anxiety.

## The Psychology of Counter-Terrorism

Routledge This edited book explores how psychology can be used to improve our understanding of terrorism and counterterrorism. This work firstly aims to provide balanced and objective insight into the psychology of terrorists; what their motivations are, what keeps them involved in terrorist groups, and what eventually forces most to end their active involvement in terrorism. Secondly, the contributors focus on the challenging issue of how to respond to terrorism. These chapters provide information for those concerned with short-term tactical problems (e.g. interviewing), as well as those looking towards the more long-term strategic questions of bringing an entire terrorist campaign to an end. Ultimately, the individuals involved in terrorism require a more complex response from society than simply a quest for their apprehension. Believing inaccurate and misleading characterizations leads inevitably to damaging policies and deficient outcomes and campaigns of violence are needlessly prolonged. It is from this perspective that the concern arises with how researchers - and the policy makers guided by them - perceive the psychology of terrorists and of terrorism. This innovative book will be of great interest to students of terrorism and counter-terrorism, security studies, psychology and politics, as well as security professionals and military colleges.

## The Trauma of Terrorism

### Sharing Knowledge and Shared Care, An International Handbook

Routledge Learn intervention strategies to counter the effects of terrorism In the twenty-first century, terrorism has become an international scourge whose effect devastates individuals, weakens societies, and cripples nations. The Trauma of Terrorism: Sharing Knowledge and Shared Care, An International Handbook and Shared Care provides a comprehensive, penetrating look at the effects of terrorism, at the prevention and treatment of immediate and long-term sequelae, at preparedness for terrorism, and at the range of individual, community, and national responses. International authorities discuss the latest knowledge and research about terror, its root causes, and its psychological impact on individuals, families, societies, and nations, as well as the societal and political responses and services that may help lessen its impact. The Trauma of Terrorism: Sharing Knowledge and Shared Care, An International Handbook analyzes the full scope of terrorism. This compendium explores numerous issues in detail, such as the nature and psychology of terrorism, how to foster a community's capacity for resilience, the psychosocial consequences of terrorism in children and adults, the centrality of traumatic grief, the need for multicultural understanding in services and treatment, interventions for children and adolescents, training programs for mental health professionals, and proactive community organization in the face of terrorism. Treatment options and services are thoroughly explored and their effectiveness evaluated. Chapters are international in scope, well-referenced, and geared to provide thoroughly reasoned recommendations to lessen the effects of terrorism. Original witness voices from survivors and professionals worldwide give

depth to the scientific character of the book. Helpful tables and graphs clearly illustrate data and ideas. **The Trauma of Terrorism: Sharing Knowledge and Shared Care, An International Handbook** presents in-depth examinations of: The Origins of Terrorism in Modern Society the origin and nature of terrorism terrorism as a strategy of psychological warfare the content and form of terrorism propaganda tactical and strategic terrorism the motivations of suicide bombers **The Psychological Consequences of Terrorism** the psychological impact of the September 11, 2001 terrorist attacks the PTSD effects of watching terrorist attacks on television the effects of acute stress symptoms on the general population after a national trauma somatization and bioterrorism the short- and long-term effects of terrorism on an individual the importance of measuring grief in the context of terrorism the psychological burden of bioterrorism the psychological impact of terrorism on children and families post-traumatic distress in adolescents with exposure to ongoing terrorism **The Impact of Terrorism on Individuals, Groups, and Society** terrorism's toll on civil liberties media-oriented terrorism media guidelines for helping reduce individual and national traumatic reactivity to terrorism culture-sensitive interventions in the treatment of terrorism the effects of terrorism on refugees **Psychological First Aid, Acute and Long-Term Treatment Following Terrorist Attacks** mental health interventions in hospitals following terrorist attacks treating survivors in an ongoing terrorist situation the treatment of children impacted by the World Trade Center attack traumatic bereavement, and its link to terrorism **School- and Community-Based Interventions in the Face of Terrorist Attacks** the "Building Resilience" Project-school-based interventions for children community-based interventions like "Project Liberty" and

## The Integration and Management of Traumatized People After Terrorist Attacks

IOS Press "This book has been prepared to publicize the results of Integration of People Experience Trauma after Terrorist Attacks into Modern Society workshop which was held under the sponsorship of NATO within the framework of 2006 Annual Education and Training Activities of the Centre of Excellence Defence Against Terrorism (COE-DAT). This book brings together papers from academics and experts to develop a concept on the treatment of traumas and depression caused by terrorist attacks and the integration of the victims into society. Even though the topic is closely related to psychology, at the same time it has strong links with social and economic matters. Therefore, the psychological impact of trauma together with sociological and economic impacts are analyzed and reflected in this book. This publication deals with overcoming the harmful effects of trauma caused by terrorist attacks and sustaining the integration of traumatized people into society. The book has four main parts: general framework; psychological impacts; sociological impacts; and economic impacts and it is composed of the articles of the 17 academicians who participated the workshop from 10 different countries (Bulgaria, Croatia, France, Israel, Netherlands, Russia, Spain, Turkey, UK, USA). In the part first part, Dr. Suat Bege explains how to prevent the causes of terrorism and to decrease the impact of terrorism and also the rights of terror victims which are provided by Turkish Army. In the following section about psychological impacts, eleven papers are included. Readers will find three papers in the part of sociological impacts, including one by Dr. James Forest on the findings of several studies on the economic and psychological impact of the 9/11 attacks on New York and Washington, DC. Lastly, two contributions are included dealing with economic impacts of trauma. This book focuses on how to deal with the impact of terrorism. The aim of the editors is to provide an international guide to facilitate the integration of terror victims into society and the book is beneficial for academicians, government officials and anyone who have studies in this area."

## Medical Preparation as an Intervention to Reduce School Age Children's Medical Exam

## Distress in the Primary Healthcare Setting

Children frequently experience anxiety when in a medical setting, which can have both short and long term negative psychological consequences. To reduce these negative repercussions, medical preparation programs have been developed to address and avoid procedural fear and anxiety in the pediatric population. These medical preparation programs have also been shown to counteract short term anxieties and possible long term negative effects. While most medical preparation programs are aimed at hospital patients, the current study targeted school age children visiting a pediatrician at a university clinic. The purpose of this study was to determine whether receiving medical preparation by a Certified Child Life Specialist resulted in less anxiety, fear, and procedural distress for children visiting a pediatrician compared to children who did not receive preparation. Thirty-six pediatric patients, ages 5 1/2-12 years of age, were randomly assigned to one of two groups: one group receiving medical preparation by a Certified Child Life Specialist (experimental group), and the other group spent time watching an age appropriate video on animal life (control group). The medical preparation group showed decreased levels of fear and anxiety, while the unprepared children in the control group showed higher levels of anxiety.

## Disaster Mental Health: Around the World and Across Time, an Issue of Psychiatric Clinics

Elsevier Health Sciences Disasters! Looking beyond their acute impact to how they affect communities in the years that follow is the focus of discussion in this issue of Psychiatric Clinics. Reviews of cases of well known disasters such as 9/11, the 2004 South Asian tsunami, Hurricane Katrina, the Haiti earthquake of 2010, the 3/11/11 "triple disaster" in Northern Japan, and others are presented from the perspective of local experts who have been asked to take a long view of what they learned and may still be learning from their post-disaster experiences that mental health professionals faced with future disasters should know. World renown experts in disaster psychiatry and global psychiatry, Craig Katz and Anand Pandya, lead this publication.

## The Psychological Effects of Police Work

### A Psychodynamic Approach

Springer Science & Business Media This book adopts a psychodynamic approach to explore the motivations, anxieties, psychological defenses, and resultant behavior of male police officers in urban settings. The author provides a theoretical overview of the psychodynamic approach to human behavior and discusses the concept of ambivalence -- the simultaneous feeling of love and hate -- that exists between the policeman and the public, the police department, his family and friends, and his fellow officers. A core section of the book examines the policeman's love and hatred for his job. Other chapters detail how policemen cope with ambivalence; outline the role of defense mechanisms as coping devices; and explore the issues of police stress, the police personality, myths of the "dumb cop," police corruption, and police brutality. The book concludes with a discussion of the problems of police officer alcohol abuse, suicide, marital difficulties, trauma, and line-of-duty injuries followed by proposals for addressing the pervasive influence of ambivalence on policemen; these proposals are addressed to the public, the police department, the officer's family and friends, fellow police officers, and the individual officer.

## Handbook of Health and Rehabilitation Psychology

**Springer Science & Business Media** Despite medical technological advances, the major killers with which we must currently contend have remained essentially the same for the past few decades. Stroke, cancer, and heart disease together account for the vast majority of deaths in the United States. In addition, due to improved medical care, many Americans who would previously have died now survive these disorders, necessitating that they receive appropriate rehabilitation efforts. One result of our own medical advances is that we must now accept the high costs associated with providing quality care to individuals who develop one of these problems, and we must avail ourselves to assist of afflicted individuals. families Despite the relative stability of causes of death and disability, the health-care field is currently experiencing tremendous pressures, both from professionals

with in the field, who desire more and better technology than is currently available, and from the public and other payers of health care (e.g., insurance companies), who seek an end to increasing health-care costs. These pressures, along with an increased emphasis on providing evidence of cost-effectiveness and quality assurance, are substantially changing the way that health-care professionals perform their jobs.

## Technophobia

### The Psychological Impact of Information Technology

Routledge Technology is taking over all aspects of life. Yet studies have shown that up to one half the population is 'technophobic'. This means having negative opinions or being anxious about information technology like personal computers. This book examines the origins of technophobia - what it is, who has it and what causes it. The impact of gender is examined and the social and cognitive psychological factors underlying technophobia are reviewed and combined into an overall psychological model. Techniques for reducing technophobia are discussed, and the effect of technophobia on everyone from school children to teenagers is analysed. Technophobia will be useful both for academic study of the area, and for those devising IT policy in schools, business and government.
