Handbook for Teaching Introductory Psychology

Volume II

Psychology Press Like its predecessors, Volume III of the *Handbook for Teaching Introductory Psychology* provides introductory psychology instructors with teaching ideas and activities that can immediately be put into practice in the classroom. It contains an organized collection of articles from *Teaching of Psychology (TOP)*, the official journal of the Society for the Teaching of Psychology, Division 2 of the American Psychological Association. Volume III contains 89 articles from TOP that have not been included in other volumes. Another distinction between this volume and its predecessors is its emphasis on testing and assessment. The book is divided into two sections. Section One, "Issues and Approaches in Teaching Introductory Psychology," contains 52 articles on critical issues, such as: how to approach the course; understanding students' interests, perceptions, and motives; students' existing knowledge of psychology (including their misconceptions); a comparison of introductory textbooks and tips on how to evaluate them; test questions and student factors affecting exam performance; an overview of different forms of feedback; giving extra credit; and how to deal with academic dishonesty. Section Two consists of 37 articles that present demonstrations, class and laboratory projects, and other techniques to enhance teaching and learning in both the introductory, as well as advanced courses in the discipline. This section is organized so as to parallel the order of topics found in most introductory psychology textbooks. Intended for academicians who teach the introductory psychology course and/or oversee grad assistants who teach the course, all royalties of the book go directly to the Society for the Teaching of Psychology to promote its activities to further improve the teaching of psychology.

Good Decisions, Better Outcomes

A Simple, Five-Step Process to Help You Make Important and Difficult Decisions with Confidence and Clarity

Bublish, Inc. During our lifetime, we have some quite difficult choices that challenge our decision-making process. Sometimes we may regret the decision or not even know if we made the right one. And occasionally we put off the decision until we absolutely have to make it or, as it happens, we wait for our circumstances to make the decision for us. Using his years of professional and personal experience, and education in engineering and science, Gerard Ibarra developed an easy-to-use framework that is measurable, repeatable, and reliable. He uses the framework "to make more efficient and effective decisions" for his clients and himself. Now, he wants to share this simple five-step process with you so that, you too, can make the best decisions for yourself.

The Lonely Mind of God

An Acosmist Answers the Primordial Existential Question by Solving the Omniscience Riddle

Phrase Bound Publications Current students of philosophy or armchair philosophers... Want the answer to the Primordial Existential Question: Why is there something rather than nothing? While history has produced no shortage of attempted answers, clearly none is the answer. Now comes the unique perspective of acosmism to provide a complete and plausible answer. After a lifetime of reflection, acosmist Sherman O'Brien offers this analysis of the issues and a thoughtful, reasoned answer to philosophy's most vexing question. The acosmic answer requires no faith whatsoever, either in supernatural or unexplained causes; in fact, it discourages it. Acosmism rejects both traditional religion and philosophically neglectful science. As a metaphysical system, it is based on an epistemological insight, with implications for immortality, determinism, ethics, and ultimate purpose. Reasoned wholly from the ground up, its conclusion is the very meaning of existence. The solution to the Omniscience Riddle becomes the key to understanding how the question is best stated and understood. This book represents one person's effort to make sense of what is true and what only seems to be so. Why is there something rather than nothing? What is your potential role in the entirety of experience? This foray into acosmism offers a path to the genuine understanding of both existence and reality. Note: the main text constitutes roughly two-thirds of the total pages, the remainder being mostly endnotes.

The Self Beyond Psychology

Austin Macauley Publishers Swami Paramananda, an enlightened mystic, has once more met the challenge of bridging the gap between science and spirituality. In his 30th book, *The Self Beyond Psychology*, he has not only brilliantly exposed the limitations of psychology, but also revealed the true nature of the self, which so far has proved to be beyond its scope. As he so rightly states, "Psychology, which boasts of being a science of human behaviour, has, like mainstream science, failed to understand the fundamental nature of man." The reader will be marvelled to travel in the inner universe, far beyond the limits of contemporary psychology, to probe into the mystery of the self, skilfully revealed by the light of wisdom of Swamiji. From this novel standpoint, humanity will no doubt be empowered with the precious knowledge it so badly needs to free itself from the quagmire of confusion and ignorance in which it is presently enmeshed. This laudable endeavour of Swami Paramananda indeed provides a true holistic understanding of human nature in contrast with the fragmentary and partial understanding of mainstream science and psychology.

Hurts So Good

The Science and Culture of Pain on Purpose

PublicAffairs An exploration of why people all over the world love to engage in pain on purpose—from dominatrices, religious ascetics, and ultramarathoners to ballerinas, icy ocean bathers, and sideshow performers Masochism is sexy, human, reviled, worshipped, and can be delightfully bizarre. Deliberate and consensual pain has been with us for millennia, encompassing everyone from Black Plague flagellants to ballerinas dancing on broken bones to competitive eaters choking down hot peppers while they cry. Masochism is a part of us. It lives inside workaholics, tattoo enthusiasts, and all manner of garden variety pain-seekers. At its core, masochism is about feeling bad, then better—a phenomenon that is long overdue for a heartfelt and hilarious investigation. And Leigh Cowart would know: they are not just a researcher and science writer—they're an inveterate, high-sensation seeking masochist. And they have a few questions: Why do people engage in masochism? What are the benefits and the costs? And what does masochism have to say about the human experience? By participating in many of these activities themselves, and through conversations with psychologists, fellow scientists, and people who seek pain for pleasure, Cowart unveils how our minds and bodies find meaning and relief in pain—a quirk in our programming that drives discipline and innovation even as it threatens to swallow us whole.

Coping and the Challenge of Resilience

Springer This book addresses how best to meet everyday challenges. The author focuses on how to think and act differently about what we do as we face challenges, and how to assess each situation as one of challenge rather than threat or harm because we have the strategies to cope. Spanning eleven chapters, the book examines the best ways to provide the core skills for life, to children, adolescents and adults, and how that is best achieved through the contemporary theories of coping. Coping has traditionally been defined in terms of reaction; that is, how people respond after or during a stressful event. More recently, coping is being defined more broadly to include anticipatory, preventive and proactive coping. This book provides case studies of resilient adults in a range of settings, highlighting how coping resources have helped them to overcome adversity. Researchers, students of psychology and social work, practitioners and those interested in the self-help field will find this book invaluable.

Pivoting

A Coach's Guide to Igniting Substantial Change

Springer Change is a necessary, though sometimes challenging part of staying relevant, being engaged and seeking ways to flourish in one's life. Coaching helps individuals develop coherent strategies for their life and work and to tap into their strengths and inspiration. Often our clients find themselves having to shift or transform their limiting belief systems or habits of mind and behavior to move them toward greater self-direction. How does such meaningful change occur? What role can coaches play to effectively lead our clients to new insights? To answer these questions, the authors set off on a scholar/practitioner journey of research, study, and first-hand experience to better comprehend the mystery and wonder of how clients actually make meaningful transitions. Their path of inquiry describes a new science of change about how pivotal moments in coaching occur and what coaches can do to help ignite substantial change. This book interweaves master coach stories, examples, tools, strategies, and research to inform and enlighten readers of the profound awakening human beings are experiencing to the power of individual choice. No longer constrained by the outdated Newtonian concepts of linear change and external control, individuals are now capable of self-organization by shifting their perceptions and choosing to leave patterns of limited thought and action. From their research, the authors found that coaches play a key facilitative role in helping unleash the capacities and power of these pivots. Readers are invited to reflect on their own experiences of insight and those of their clients and to focus on priming strategies they can use to inspire and support pivotal moments for others. The authors share a dynamic model for igniting substantial change which shows the interrelationship of three core processes that contribute to a person's readiness for a shift: beliefs, inner knowing, and memory.

Depression

BoD - Books on Demand Depressive disorders can be seen as a disturbance to the balance of mind and body. Because it is a mental disorder and psychiatry is a branch of medicine, the question how mind and body interact in depression should be treated as a medical rather than metaphysical mind-body problem. The relation between mind and body as it pertains to this illness should be construed in teleological rather than causal terms. Mental states like beliefs and emotions serve an adaptive purpose by constraining the physiologic systems involved in the body's stress response, thus preserving homeostasis and protecting us from various disorders. Depression results when the mind fails its constraining role.

Discovering Psychology: The Science of Mind

Cengage Learning In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it.
