Biom mineralization

This open access book is the proceedings of the 14th International Symposium on Biom mineralization (BIOMIN XIV) held in 2017 at Tsukuba. Over the past 45 years, biom mineralization research has unveiled details of the characteristics of the nano-structure of various biom minerals; the formation mechanism of this nano-structure, including the initial stage of crystallization; and the function of organic matrices in biom minerals, and this knowledge has been applied to dental, medical, pharmaceutical, materials, agricultural and environmental sciences and paleontology. As such, biom mineralization is an important interdisciplinary research area, and further advances are expected in both fundamental and applied research. Suriname

Recent Economic Developments

International Monetary Fund **This paper reviews economic developments in Suriname during 1994-96. In 1995, there was a major turnaround in Suriname's economic and financial situation following the expansionary fiscal and monetary policies pursued in the first half of the 1990s and the political and economic disruptions of the 1980s. The marked improvement was owing to the restoration of financial discipline, a strengthening of international bauxite prices, and the unification and subsequent stabilization of the exchange rate. The inflation fell further to less than 1 percent in 1996.**
