The Silent Service in World War II

The Story of the U.S. Navy Submarine Force in the Words of the Men Who Lived It

Casemate **When the Japanese attacked Pearl Harbor on 7 December 1941, the U.S. Navy had a total of 111 submarines. However, this fleet was not nearly as impressive as the number suggests. It was mostly a collection of aging boats from the late teens and early twenties, with only a few of the newer, more modern Gato-class boats. Fortunately, with the war in Europe was already two years old and friction with Japan ever-increasing, help from what would become known as the Silent Service in the Pacific was on the way: there were 73 of the new fleet submarines under construction. The Silent Service in World War II tells the story of America's intrepid underwater warriors in the words**

of the men who lived the war in the Pacific against Japan. The enemy had already begun to deploy advanced boats, but the U.S. was soon able to match them. By 1943 the new Gato-class boats were making a difference, carrying the war not just to the Japanese Imperial Navy, but to the vital merchant fleet that carried the vast array of materiel needed to keep the land of the Rising Sun afloat. As the war progressed, American success in the Solomons, starting with Guadalcanal, began to constrict the Japanese sea lanes, and operating singly or in wolfpacks they were able to press their attacks on convoys operating beyond the range of our airpower, making daring forays even into the home waters of Japan itself in the quest for ever more elusive targets. Also taking on Japanese warships, as well as rescuing downed airmen (such as the grateful first President Bush), U.S. submarines made an enormous contribution to our war against Japan. This book takes you through the war as you learn what it was like to serve on submarines in combat, the exhilaration of a successful attack, and the terror of being depth-charged. And aside from enemy action, the sea itself could prove to be an extremely hostile environment as many of these stories attest. From early war patrols in obsolescent, unreliable S-boats to new, modern fleet submarines roving the Pacific, the forty-six stories in this anthology give you a full understanding of what it was like to be a U.S. Navy submariner in combat.

Updated Transport, Home Care, and Noninvasive Devices chapter includes the use of mechanical ventilators in alternative sites, e.g., air transport and long-term acute care (LTAC) facilities.

You Can Stop Humming Now

A Doctor's Stories of Life, Death, and in Between

Little, Brown "Gripping, soaring, inspiring."--Atul Gawande, author of *Being Mortal* For readers of Atul Gawande and Jerome Groopman, a book of beautifully crafted stories about what life is like for patients kept alive by modern medical technology. Modern medicine is a world that glimmers with new technology and cutting-edge research. To the public eye, medical stories often begin with sirens and flashing lights and culminate in survival or death. But these are only the most visible narratives. As a critical care doctor treating people at their sickest, Daniela Lamas is fascinated by a different story: what comes after for those whose lives are extended by days, months, or years as a result of our treatments and technologies? In *You Can Stop Humming Now*, Lamas explores the complex answers to this question through intimate accounts of patients and their families. A grandfather whose failing heart has been replaced by a battery-operated pump; a salesman who found himself a kidney donor on social media; a college student who survived a near fatal overdose and returned home, alive but not the same; and a young woman navigating an adulthood she never thought she'd live to see -- these moving narratives paint a detailed picture of the fragile border between sickness and health. Riveting, gorgeously told, and deeply personal, *You Can Stop Humming Now* is a compassionate,

uncompromising look at the choices and realities that many of us, and our families, may one day face.
