COLOUR CODING FOR LEARNERS WITH AUTISM

A RESOURCE BOOK FOR CREATING MEANING THROUGH COLOUR AT HOME AND SCHOOL

Jessica Kingsley Publishers Children on the autism spectrum are often highly visual learners, making colour a powerful and motivating learning tool. This book explains how colour coding helps young people with autism to generalise lessons already learnt. For example, assigning the colour aqua to all personal care activities or the colour purple to timetabling and transitions establishes clear, visual categories. This allows children to draw on learnt experiences, which creates a sense of order, reduces anxiety, and can aid communication, understanding emotions, organisation, coping with change and diversifying diet. A wealth of tried-and-tested printable resources to enable the practical application of colour coding in the classroom and at home are included on a CD-ROM. With colourful illustrations and resources, Colour Coding for Learners with Autism is an effective, must-have teaching tool for anyone involved in the education of young people with autism.

BYTES, BOMBS, AND SPIES

THE STRATEGIC DIMENSIONS OF OFFENSIVE CYBER OPERATIONS

Brookings Institution Press “We are dropping cyber bombs. We have never done that before.”—U.S. Defense Department official A new era of war fighting is emerging for the U.S. military. Hi-tech weapons have given way to hi tech in a number of instances recently: A computer virus is unleashed that destroys centrifuges in Iran, slowing that country’s attempt to build a nuclear weapon. ISIS, which has made the internet the backbone of its terror operations, finds its network-based command and control systems are overwhelmed in a cyber attack. A number of North Korean ballistic missiles fail on launch, reportedly because their systems were compromised by a cyber campaign. Offensive cyber operations like these have become important components of U.S. defense strategy and their role will grow larger. But just what offensive cyber weapons are and how they could be used remains clouded by secrecy. This new volume by Amy Zegart and Herb Lin is a groundbreaking discussion and exploration of cyber weapons with a focus on their strategic dimensions. It brings together many of the leading specialists in the field to provide new and incisive analysis of what former CIA director Michael Hayden has called “digital combat power” and how the United States should incorporate that power into its national security strategy.

NEW MEDIA, 1740-1915

MIT Press A cultural history of media that were "new media" in the eighteenth, nineteenth, and twentieth centuries. Reminding us that all media were once new, this book challenges the notion that to study new media is to study exclusively today's new media. Examining a variety of media in their historic contexts, it explores those moments of transition when new media were not yet fully defined and their significance was still in flux. Examples range from familiar devices such as the telephone and phonograph to unfamiliar curiosities such as the physiognotrace and the zograscope. Moving beyond the story of technological innovation, the book considers emergent media as sites of ongoing cultural exchange. It considers how habits and structures of communication can frame a collective sense of public and private and how they inform our apprehensions of the "real." By recovering different (and past) senses of media in transition, *New Media, 1740-1915* promises to deepen our historical understanding of all media and thus to sharpen our critical awareness of how they acquire their meaning and power.
