Millionaire by Thirty The Quickest Path to Early Financial Independence Business Plus Most people know that there are 70 million Baby Boomers in America today....but what is less known is that there are approximately 100 million people in America between the ages of 16 and 30. This generation has just entered, or will soon be entering the work force. And they have no idea how to invest, save, or handle their money. Young people today come out of school having had little or no formal education on the basics of money management. Many have large debts from student loans looming over their heads. And many feel confused and powerless when their pricey educations don't translate into high paying jobs. They feel that their \$30,000-\$40,000 salary is too meager to bother with investing, and they constantly fear that there will be "too much month left at the end of their money." Douglas R. Andrew has shown the parents of this generation a different pathway to financial freedom. Now Doug and his sons, Emron and Aaron - both of whom are in their mid-20s - show the under-30 crowd how they can break from traditional 401k investment plans and instead can find a better way by investing in real estate, budgeting effectively, avoiding unnecessary taxes and using life insurance to create tax-free income. With the principles outlined in Millionaire by Thirty, recent graduates will be earning enough interest on their savings to meet their basic living expenses by the time they're 30. And by the time they're 35, their investments will be earning more money than they are, guaranteeing them a happy, wealthy future.

Nootropics are generally called "smart drugs" because they improve brainpower. but, more than 80 unique substances can fall under this broad category and they are wildly distinctive and generally useless. They include Adderall for ADHD, psychedelics, and even coffee. Do nootropics actually work? Choosing one as a complement is a muddy picture, however some nootropics DO work. most "smart pills" are stimulants -- short-acting chemicals that give you a boost in focus and attention for some hours. The nootropics that we have good evidence for, such as Adderall and Modafinil (sometimes used to help humans recover from a coma), are prescribed drugs. The "smart drugs" that aren't prescription-based or illegal have little or no proof suggesting they work. The substance must... Help the brain function

under disruptive conditions, such as hypoxia (low oxygen) and electroconvulsive shock. Protect the brain from chemical and physical assaults, such as anti-cholinergic drugs and barbiturates. Increase the efficacy of neuronal firing control mechanisms in cortical and sub-cortical regions of the brain. Possess few or no side effects and be virtually non-toxic. Enhance memory and ability to learn. Research indicates getting omega-3s from fish is better than simply taking drugs, but if fish is simply too tough to get, put together, or eat, then the drugs are an awesome 2d alternative. Omega-3s are the real "smart drugs" in that you could not sense the results the day you consume them, however you may be in much better cognitive shape a few years from now than in case you had never added them in your diet.
